

## Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

## Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

## Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

# THE EDUCATIONAL TIMES

AND  
JOURNAL OF THE COLLEGE OF PRECEPTORS

Vol. LXX No. 661

FEBRUARY 1, 1917

Published Quarterly. Price, to Non-Members, 6d.; by post, 7d. Annual Subscription, 2s.

THE COLLEGE OF PRECEPTORS.  
Incorporated by Royal Charter.  
BLOOMSBURY SQUARE, W.C.

### GENERAL MEETING.

The Half-yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, on Saturday, the 31st of March, 1917, at 3.30 p.m.

### LECTURES FOR TEACHERS.

A Course of Twelve Lectures on "The Essentials of Educational Psychology," by Professor John Adams, will begin on Thursday, the 8th of February.

The Course will be helpful to teachers who are preparing for the Diploma Examinations.

For Syllabus, see page 13.

### EXAMINATIONS.

Diplomas. — The next Examination of Teachers for the Diplomas of the College will begin on the 31st of December, 1917.

The Summer Diploma Examination has been discontinued.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in February, 1917.

Certificate and Lower Forms Examinations.—The Midsummer Examinations will begin on the 25th of June, 1917.

In and after June, 1917, Italian papers will be set in the Senior and Junior Grades.

Professional Preliminary Examinations.—The next Examination will begin on the 6th of March, 1917.

Commercial Examinations.—An Examination for Certificates of Proficiency in Commercial Subjects will be held in December, 1917.

The Regulations for the above Examinations can be obtained on application to the Secretary.

G. CHALMERS; Secretary.

THE ASSOCIATED BOARD OF THE R.A.M. AND R.O.M. FOR LOCAL EXAMINATIONS IN MUSIC.  
Patron: HIS MAJESTY THE KING.

LOCAL CENTRE EXAMINATIONS (Syllabus A). Examinations in Theory held in March and November at all Centres. In Practical Subjects in March-April at all Centres, and in the London District and certain Provincial Centres in November-December also. Entries for the March-April Examinations close Wednesday, February 7th, 1917 (or, with extra fee, February 15th).

SCHOOL EXAMINATIONS (Syllabus B). Held throughout the British Isles three times a year, viz., March-April, June-July, and October-November. Entries for the March-April Examinations close Wednesday, January 31st, 1917 (or, with extra fee, February 8th).

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 3d. per set, per year, post free.

The Board offers annually SIX EXHIBITIONS, tenable at the R.A.M. or R.O.M. for two or three years. Syllabuses A and B, the Syllabus in Ear Training and Sight Singing, entry forms and any further information will be sent post free on application to—

JAMES MUIR, Secretary,  
15 Bedford Square, London, W.C.

Telegrams: "Associa. London."

## LONDON COLLEGE OF MUSIC.

(Trinity College, Cambridge).

Telegrams—"TUTOBESS, OX, LONDON."

Telephone—No. 1136 Museum.

*This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.*

**A.—EMPLOYMENT DEPARTMENT.**

(i) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

*No charge is made to Purchasers.*

*All communications and inquiries are treated in the strictest confidence.*

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

*Full particulars will be forwarded on application.*

## SOME STANDARD LATIN CLASS BOOKS.

*Latest Addition to Bell's Simplified Latin Classics.*

**Caesar's Belgian Campaign.** Edited, with Exercises and Vocabulary, by **S. E. WINBOLT, M.A.**, Christ's Hospital. Freely Illustrated. **1s. 6d.**

This new volume, in which Mr. Winbolt brings out the strong resemblance which the battle of the Aisne in the present campaign bears to Caesar's operations in the same neighbourhood, shows how, in the light of current events, there is a good opportunity of making pupils realize an episode drawn from an ancient classic.

**Books of Britain and the Emperors.** A New Series of Illustrated Latin Readers. Edited, with Notes and Vocabulary, by **E. C. MARCHANT, M.A.** Book I. With Maps and Illustrations. **1s.**

**De Ducibus.** Selections from Cornelius Nepos. By **W. G. BUTLER, M.A.**, Christ's Hospital. With numerous Illustrations and brief Grammatical Notes. Fcap. 8vo. **1s. 6d.** Uniform with Bell's Simplified Latin Classics.

"Boys ought to learn a good deal from this little book."—

*Times Educational Supplement.*

**Dialogues of Roman Life.** By **S. E. WINBOLT, M.A.** Fcap. 8vo. Fully Illustrated. With or without Vocabulary. **2s.**

"This book is a welcome sign of the times. Not only the dialogue form, and the subject-matter, will prove useful in the schoolroom, but the fact how like the Roman boy was to the English boy. The vocabulary may at once be turned to account by master and pupils."—*School World.*

**Latin of the Empire (Prose and Verse).** An advanced Latin Reader. By **W. KING GILLIES, M.A., B.A.** (Oxon), and **A. R. CUMMING, M.A.**, Classical Master, Dollar Institution. With an introduction by Professor **J. S. PHILLIMORE, M.A.** Crown 8vo. 326 pp. *New and Cheaper Edition.* **3s.**

**A Latin Prose Grammar.** By **E. L. CHURCHILL, B.A.**, and **E. V. SLATER, M.A.**, of Eton College. *2nd edition.* Demy 8vo. **3s. 6d.**

"Has several new and highly commendable features. . . . An excellent textbook."—*The Journal of Education.*

**The Shorter Aeneid.** By **H. H. HARDY, M.A.**, Rugby School, with Introduction by Prof. **H. E. BUTLER**, University of London, and Connecting Links. Crown 8vo. **2s. 6d.**

"This is an excellent idea, enabling schoolboys to read their Virgil as a whole, instead of reading an isolated book or two, or else mere selections. . . . The notes are delightfully brief and to the point. . . . almost a model of what is required in a school edition."—*School World.*

**Bell's Concise Latin Course.** Part I. By **E. C. MARCHANT, M.A.**, and **J. C. SPENCER, B.A.** *7th edition, revised with long quantities marked.* Crown 8vo. **2s.**

— Part II. By **E. C. MARCHANT, M.A.**, and **S. E. WINBOLT, M.A.** *3rd edition.* Crown 8vo. **2s. 6d.**

**Bell's Latin Course for the First Year.** By **E. C. MARCHANT, M.A.**, Fellow of Lincoln College, Oxford, and **J. C. SPENCER, B.A.**, Assistant Master at St. Paul's Preparatory School. In Three Parts. Crown 8vo. With Coloured Plates and numerous other Illustrations. **1s. 6d.** each. *In this edition the long quantities are marked.*

**Via Rōmāna.** A new Latin Course on the Direct Method. By **F. GRANGER**, Professor of Latin at the University College, Nottingham. Crown 8vo. Illustrated. With or without a full Latin-English vocabulary. **1s. 6d.** net.

"It is certainly the best first-year book on Direct Method lines which we have yet seen."—*School World.*

**Bell's Latin Picture Cards. (Speculum Imperi Romani.)** Edited by Professor **FRANK GRANGER, M.A.** A Set of Sixteen Cards, printed in Colours, with Vocabulary and Exercises on the back of each. Price per packet, **1s. 3d.** net. Cards I-VIII illustrate scenes from Caesar, Livy, and Cicero. Cards IX-XVI are intended for use with Virgil, Horace, and Ovid.

Packets of 16 cards, confined to either series of subjects, or 16 of any one card, will be supplied if desired.

The Educational Times.

Until further notice, "The Educational Times" will be issued four times a year: on the 1st of February, May, August, and November. The next issue will appear on May 1st.

Communications intended for the Editor should be addressed to Ulverscroft, High Wycombe.

THE NEXT STEP.

THE New Year comes in with thoughts and hopes of peace. Yet Germany's attitude is so extravagantly defiant that, at the time of writing, no immediate peace seems possible. More and more, as month is added to month, does the War dominate our life: it seems as if nothing mattered except the prosecution of the War. But the emotions that have been stirred find outlets in many ways. We are shaken cruelly from our habits of security and self-sufficiency. We are bound to ask ourselves whether the coming generation is to suffer as we have suffered, and what steps can be taken to prevent such a calamity. With almost complete unanimity the nation looks to education, to a reformed and enlarged system of national education, to bring out and make effective the spirit of justice and tolerance, of freedom and sympathy. To an increasing extent the education of schools, institutes, colleges, and Universities is becoming a matter of national importance. The education of the home and the workshop, seventy years ago of dominating influence, has now become a lessening factor; though it is true that the education of the home plays a most important part in the life of the future citizen, and it is an influence, for good or ill, that has a lasting effect. It is true that school education may be rendered less effective when it is unsupported by home training. Educational reformers do not forget this fact; but it is less easy to interfere by legislation or to influence the home life of the children. As things are at present, all that is claimed is that the

State should begin to influence the children at as early an age as possible.

Committees have sat and are sitting; reports have been published; discussion has been aroused. And now Mr. Fisher has left the University of Sheffield in order to undertake the grave task of sifting reports, eliciting opinion, and planning a scheme. Mr. Fisher's appointment as President of the Board of Education is the most hopeful sign of success. For the first time in the history of the Board, education in England is to be governed, not by a politician in training for a more important post, but by a man who stands outside party politics, an experienced educationist, a man of ideas and imagination, who has accepted this work because he is qualified for it, and not merely because he is a member of a political party for whom a post must be found. In welcoming Mr. Fisher's appointment, we do not forget the dangers of government by the class of persons known as experts. As a rule, the expert is better employed in advising than in governing. His experience has, as a rule, been deep rather than wide. This is especially true of schoolmasters. Fight against it as they will, and a few have done so with admirable success, it remains true for most of us that the essential conditions of our life and work concentrate our experience within a narrow limit, and cut us off from that wide knowledge of and sympathy with life in all its aspects that are necessary for the wise and successful administrator. There is an inevitable tendency in human nature, on the part of the pupil to imitate, on the part of the teacher to seek the reproduction of self. Teachers are teachers, and their "best" pupils are those who approximate most nearly to the teaching ideal, who will make the best teachers. But Mr. Fisher is a man of wide experience and sincere judgment. He will escape this pitfall.

Our pages in this issue are largely filled with some of the proposals that Dr. Fisher is now called upon to consider. They are important, and will repay careful study. In some detail or other, every proposal put forward is open to criticism. All bodies of persons, however wide their aims, are primarily concerned with the section of the population that each represents. But each is striving for the general good; it is only by getting a number of

points of view that the President can effectively advise Parliament as to the nation's wishes. The Education Reform Council, founded at a conference called by the Teachers' Guild, has put forward some very wise suggestions. From the statement of their general aim we quote the following: "To admit all to the quest for goodness, truth, and beauty." The importance of this, among the other aims of education, is only just beginning to be realized, and requires frequent iteration. The aim may be felt to be vague and difficult to carry out, but it is the one thing that really matters; it is religion, and life without religion is aimless and valueless.

Another suggestion is the revival of the proposal that the country should be divided into educational provinces, each with its University. The practical difficulty here is to decide the provincial limits of London, Oxford, and Cambridge. Perhaps a more feasible plan would be to encourage migration from one University to another during the undergraduate course. In this way alone could the Universities be equalized in opportunity without being ground down to a uniform level by the interference of the State.

"Worthy private effort in education should be encouraged," is another extract from this report with which we have full sympathy. The suggestion is not, it may be noted, that existing private schools should be recognized and grudgingly admitted to take a place in the State system, because they happen to be there, and hardship would ensue otherwise; but the word "encouraged" is used. We must retain, and all evidence points to a recognition of the fact, our private schools, and they must be encouraged to work in complete harmony with the State system as an integral part of it and not as a tolerated excrescence. It is the private school that will prevent the State school from reaching a condition of death-in-life as a result of over-organization.

We are all agreed nowadays on the need for continuation education in some form up to the age of seventeen for all who leave a full-time school before that age. The Reform Council has put its finger on the weak spot in existing continuation schools, and has consequently indicated the remedy: "The continuation school must be really a school with a corporate life of its own."

In the section dealing with the Training of Character there is a reference to foolish indulgence at home, "showing itself in a sentimental resentment at even proper discipline." Here again the Reform Council has indicated a very general weakness in the national economy. The absence of discipline in home life, followed by the lessening of discipline in school life, caused by a reaction against the repressive policy of a previous generation, and from a fear lest discipline may retard or deform the growth of personality, is an existing phenomenon full of danger. There can be no sound growth without discipline; schools have now before them a harder task than has ever been previously proposed. They have to devise and carry out unswervingly a system of discipline that will help, and not check, the beneficial activities of the

growing personality. Adults know the need of self-discipline, of the discipline that comes from living with others—the home, the school, the office, the street. Children must be helped betimes to train themselves to the same discipline. The want of it is apparent everywhere to-day.

The Workers' Educational Association represents a very large portion of the people, and a section that until lately has been almost mute in its demands. The recommendations therefore claim close attention. In the covering letter, signed by the Secretary, there is the same appeal to deep underlying principles that was noted in the suggestions of the Reform Council. "In the opinion of the Association," we read, "the ideal underlying educational reform, in whatever direction it is undertaken, must be essentially humane, and, in the broadest sense of the word, spiritual, and no improvements in legislation or administrative machinery can hope to achieve success unless those who are responsible for their working bear this fact constantly in mind." And, again, the proposals "have been conceived in the hope and desire that they may serve to set free the spiritual forces which the War has so strikingly brought to light in every section of the people, nowhere more than among the working class." As far as concerns administration, the Association recommends that education, in all its stages, should be free, that full-time attendance should be compulsory up to the age of sixteen, and that nursery schools for children between the ages of two and six should be established in all areas.

The next step forward in education means a great change in legislation and administration: larger grants, smaller classes, higher salaries, the abolition of fees, the extension of school age both upwards and downwards, and fuller provision of educational opportunities. It means also improved methods of teaching based on a fuller understanding of the needs and powers of the children. These two matters are important. More important still is the spiritual revolution that is approaching, the recognition of other values than commercial success, the determination to give every child, so far as is possible, the fullest opportunities of developing the powers of body, mind, and soul, and of learning the spiritual significance of life.

---

## NOTES.

---

WE may suppose that Mr. Fisher's appointment as President of the Board of Education is due to Mr. Lloyd George, who has introduced into Government offices the principle of selecting a man because he is fit for his job. For long past, the theory has prevailed that a capable man can administer any department without previously acquiring any special knowledge of, or training in, the work of his department. The "expert" was distrusted; and there were grounds for this distrust. But Mr. Fisher, while possessing the training of the expert, will be able

to bring to his work the breadth of sympathy and knowledge necessary to secure that the scheme of national education shall be based upon the vision of a man of imagination. The next step is, that all educational parties in the State should agree to work together for the national good, should sink their special personal aims, and be willing to sacrifice something of prestige or privilege in order to secure a sound system. In the past we have seen educational schemes, launched with high hopes, come to nothing because of the narrow opposition of an obstinate section.

THE Master of Balliol, in his inaugural address to the Fifth Annual Conference of Educational Associations, spoke with emphasis of the importance of the scheme for educational reconstruction put forward by the Workers' Educational Association. We print this scheme in another part of this issue. Mr. Smith had himself been at the Conference in which the principles advocated in this scheme were laid down. He had himself visited many industrial centres in order to find out how much support could be expected. He thinks that there may be, in favour of the proposals, some seven million voters, a number that may be doubled in a short time. If this is so, and we think there are good grounds for the belief, the reproach that we do not care for education will be removed from the country. It has been the custom in England for the Government to follow rather than to lead. The justification for Government inaction concerning education in the past was that there has been no widespread demand for further educational provision. With the influence of the Workers' Educational Association behind him, Mr. Fisher should have no difficulty in getting the Government and Parliament to grant the necessary funds for reconstruction.

IN reference to a "Note" of ours in the last issue, dealing with reading aloud as an examination subject, Prof. Rippmann writes: "You regard reading aloud as an unsuitable subject for examination for two reasons—the cost and the difficulty of maintaining an even standard. Where there is a compulsory oral test in modern foreign languages (as in the school examinations of the University of London), there would be very little additional cost if the examiner in French was competent to deal with English also; and the time needed for the test would be appreciably shorter than in the case of a foreign language. I agree that some care would be required to secure a uniform standard—never an easy matter in oral examinations; but, as the essential thing would be 'pass' or 'fail,' with perhaps a second border line for 'distinction,' it should not be impossible to arrive at an agreement among examiners. They might even have some preliminary practice in estimating 'reading aloud'; a comparison of the marks they had respectively assigned would soon give them all much the same 'feeling' as to standard."

It was also stated—and there is a strong feeling behind the statement—that teachers need not be sorry that part of the work they are daily doing should be excluded from examination. In reference to this Prof. Rippmann writes: "Where teachers in our secondary schools are daily doing this work (viz. the cultivation of clear, intelligent, and expressive reading aloud), I have always found that they eagerly welcomed the suggestion of an oral test; it is rather the teachers (at present in the majority, I fear) who do this work anything but daily that are reluctant to have a test in reading aloud—a test which some would fail to pass themselves. The compulsory test in oral French and German has reacted very favourably on the teaching, and there can be no doubt that a test in reading aloud would have equally salutary effects. Posterity will tell with a smile of our age when candidates were severely mulcted in marks for failing to spell according to an absurd 'orthography,' while their speech might be marred by faults innumerable without its ever being brought to the notice of the examiners."

AT a meeting of the Civic and Moral Education League the matter of teaching the functions of *Sex-knowledge* the body to children was discussed. There is still great uncertainty in the matter. One thing seems fairly certain, that quite young children up to the age of ten or eleven can receive this knowledge in perfect simplicity and innocence from mothers sufficiently educated to give it; and it further seems clear that in such cases the children are greatly helped. But more information is wanted of the effect on children generally of instruction in the laws of sex. The Society of Education has appointed a Committee to deal with the question. Some time ago this Committee appealed to our readers for assistance. We are informed that much useful information was received, and that the Committee would welcome further replies. Copies of the Committee's *Questionnaire* may be obtained from the Secretary of the Research Committee, Society of Education, 9 Brunswick Square, London, W.C.

THE wonderful influence of the Boy Scouts' organization is now a commonplace; and it is therefore quite natural that the desire should be felt to extend the influence downwards. For some little time past there have been tentative efforts at organizing a junior section of the Scouts. Now the organization has been rendered complete by the publication of a penny monthly magazine called the *Wolf Cub*, and of a book written by Sir Robert Baden-Powell, entitled "The Wolf Cubs' Handbook." This is published by C. A. Pearson at 1s. 6d. net, and can be purchased either through a bookseller or at headquarters. The object of the organization is to develop in the boys the ambition to train themselves in character, handicrafts, service for others, and physical health. The age of Wolf Cubs is from eight to twelve. At the younger age boys

are far less willing to organize themselves and to act in union than they are at a later age; but the effect of being a Wolf Cub, of belonging to an organization, of holding a Council, of making a promise, and of having a definite thing to work for, is already apparent. The book is in three parts:—the first for the boy; the second giving in detail the tests and standards up to which he has to work; and the third part gives the ideas and aims underlying the whole scheme of training, and is intended for the Cub Masters.

In several directions the revolt against the examination syllabus is gaining ground. We are especially asked to publish for the information of our readers a resolution

*The Science Syllabus.*

which was passed by a Committee of the Educational Science Section of the British Association. This Committee was appointed to consider and report upon the method and substance of science teaching in secondary schools, with particular reference to its essential place in a general education. The resolution runs as follows: "That, in order to secure freedom of action for teachers of science in schools, and to prevent the instruction from becoming stereotyped, it is undesirable for any external authority to prescribe a detailed syllabus in science for use in schools, whether intended as the basis of examinations or otherwise." This resolution must be looked upon as an interim report, for it by no means covers the terms of reference. It indicates the irritation of science masters at interference from outside examining bodies, and is symptomatic of an attitude that will have to be recognized in the forthcoming reconstruction. But as expressing a merely negative attitude it does not carry us far.

To a very large number of people it is good news that Dr. Maria Montessori proposes to visit England in April of this year in order to give both a training course for intending teachers and also a series of popular lectures. According to the announcement that has been issued, Mme Montessori will "reveal her method for children up to ten years of age." In connexion with the proposed visit a kinematograph film entitled "A Day in a Montessori School in London" has been prepared. This ought to prove very useful for people with quick eyesight. The trouble about films is that their rapid movement often prevents a clear impression of the action represented. Application for admission to the training course should be made to C. A. Bang, Esq., 20 Bedford Street, Strand, London, W.C. We hope much from Mme Montessori's public lectures. There is a great deal of misunderstanding about freedom and liberty which should be removed. To any careful student of the method it is quite clear that at no time are the children in a Montessori school absolutely free.

FROM every branch of the teaching profession comes

*Salaries.*

the demand for improved financial position and greater security of tenure.

There are two reasons for larger salaries.

In the first place, teachers decline, and quite rightly decline, except under compulsion, to allow their standard of living to fall below a certain level. This compulsion has been, and is being, exercised, for many teachers find it impossible to maintain the standard to which their education has accustomed them. The second point of view concerns more directly employers. It is found that applicants for teaching posts are becoming more and more scarce. Fewer men and women will enter a profession in which, however devoted they are to their work, they foresee nothing but a constant struggle against depressing poverty. The Authorities are finding out that, if schools are to be staffed adequately, salaries must be increased. The Assistant Masters' Association advocate a national salaries system, which, in practice, means extending the conditions of the Civil Service to teachers. It is difficult to see what other prospect is practicable, although the prospect has obvious drawbacks, than to make the State the paymaster for the rendering of a national service.

SPELLING reform is notoriously hard to introduce since the era of the printed word, which has set up a rigid standard.

*Simplified Spelling.*

The Simplified Spelling Society continues to work industriously in order to influence public opinion. The difficulty is to make a beginning. Changes must come rather gradually, a few words at a time; and such changes must be promulgated by authority. The individual who tries to reform alone, meets ridicule or bewilderment. The Master of University College, Oxford, is a convinced reformer, and he said at the recent Conference that spelling was not a natural datum or divine revelation, but was simply a human invention for practical purposes. To be a satisfactory instrument, spelling ought, he said, to be rational, easy, and simple; but the existing English spelling was irrational, difficult, complicated, and very badly adapted for its purpose. This defective spelling, he thought, could be reformed, and the Simplified Spelling Society offered a very acceptable method of reform. Spelling reform is an Imperial question and cannot be undertaken without Government action.

We have received from the Army Council, through the Board of Education, a pamphlet dealing with the inadvertent disclosure of military secrets. It is stated that the enemy receive and scan with care every newspaper published in England, and every other printed publication that they can secure. A hint here and a hint there, skilfully put together, may lead to the expectation, though not to the certainty, of some military movement in some particular quarter. The Board suggest that Local Authorities should distribute this pamphlet in the schools, and

that it should be made the basis of a lesson to the children. We are especially warned against giving any information about names, dates, and places in periodicals, rolls of honour, reports of War work and voluntary associations, appeals for comforts for the troops, and similar publications. Among such printed matter would be included school magazines. The enemy organization is, we know, very complete; and, however unimportant we may deem the information we individually possess, we are bound to respect the judgment of the Army Council that sees a danger in the accumulation and comparison of small items of information.

**Emergency War Work.** THE Women's Defence Relief Corps ask us to remind our readers of the opportunity of doing work on the land during the school holidays. In the past, we are told, such work has proved most satisfactory and encouraging. The women had grit; they treated discomfort lightly, and, by bringing their intelligence to bear on strange tasks, found them by no means difficult. More women will be needed this year to fill the place of agricultural labourers who have "joined up." The organization must be prepared to advance for the coming demand from farmers. Any women teachers who are ready to give up their holidays to agricultural work should communicate betimes with Miss Myers, 10 Abbey Road, St. John's Wood, London, N.W. (enclosing a stamped envelope for reply). We are also informed that at Cherwell Hall a specially shortened term of training for women teachers in secondary schools has been arranged, which will fit them for immediate work, while leaving the rest of the full course until after the War. Particulars may be obtained from the Principal, Cherwell Hall, Oxford. The Scholarship Secretary of the Common Cause, 14 Great Smith Street, London, S.W., will give information in reference to two scholarships of £75 each offered to women who wish to qualify for positions as industrial chemists.

**Boys or Subjects.** THE address given by Prof. John Adams at the January Conference was full of practical help for the class teacher. Some teachers are inclined to take the view that they must teach a certain subject: must put before a class a certain amount of information, irrespective of the capacity of the individuals in the class. Such teachers say: It is my business to teach my subject; it is not my business to consider whether my pupils are capable of learning. Other teachers say: I have to consider my pupils, and give them only what they are capable of assimilating. There are, of course, two processes. A thing is not taught until it is learnt, and there must be a due relation between the two processes. The teacher may teach and the pupil may learn independently of one another. A pupil may learn in spite of the teaching, whether it be good, bad, or indifferent. Real success is attained when the learning is a direct result of the teaching. "Unless," says Prof. Adams, "the learning follows because of the teaching, there has been no real teaching."

THERE are many teachers who, in moments of irritation and impatience, say to a pupil: "I can't think how you could make a mistake like that." It is our business to understand, says Prof. Adams; it is part of our professional work. We have to guide our pupils in the process of learning, to teach them how to learn, to understand their mental processes in order that we may train and develop them. Teachers must stoop to conquer. The pupil is at his best in learning in school only when his teachers fit their activities most exactly to his needs. This matter of "the how to learn" is most often perhaps neglected in the case of preparation or homework. The teacher at the end of a lesson sometimes says hurriedly, as the bell rings, "do the next exercise." And when the next exercise is shown up he uses much blue pencil and nervous energy in scoring mistakes that ought not to have been made, and that he cannot understand how the pupils could make, because he had not taken the precaution beforehand to consider how far the exercise was suited to, or within the capacity of, the pupil. The "how to do it" was left to the pupil, with results wasteful of time and energy.

### EDUCATIONAL RECONSTRUCTION.

#### THE RECOMMENDATIONS OF THE WORKERS' EDUCATIONAL ASSOCIATION TO THE RECONSTRUCTION COMMITTEE.

*To the Secretary of the Reconstruction Committee.*

SIR,—On behalf of the Workers' Educational Association, I beg to enclose herewith copies of a number of resolutions, together with explanatory matter, drawn up by that body, with the request that you will communicate them to the Sub-Committee which has been appointed to review the whole field of national education.

The resolutions embody the conclusions of the Association, after as careful inquiry and discussion as time permitted, into those aspects of the problem of education on which it felt entitled, and indeed impelled, in virtue of its professed objects and the experience of its members and affiliated societies, to offer a considered opinion.

It may be well to state briefly how the resolutions came into being and what body of opinion they represent.

The Workers' Educational Association is a federation of 2,150 working class and educational bodies in England and Wales, including 737 Trade Unions, Trades Councils and branches, 381 co-operative committees, 302 adult schools, brotherhoods, &c., 12 University bodies, 9 Local Education Authorities, 170 working men's clubs, institutes, &c., 138 teachers' associations, 91 educational and literary societies, 46 classes and study circles, and 264 various societies, mainly of workpeople.

Affiliated bodies which are national in their scope are represented on the central governing body of the Association. Those which are local are represented on the governing bodies of the branches and districts by which the work of the Association is carried on, in close contact with Universities and Local Education Authorities, in different parts of the country.

Before making any effort to formulate a policy on the problem of educational reconstruction, we decided to consult, as far as possible, the working-class as a whole. With this object in view, we issued last August a pamphlet, "What Labour Wants from Education," to all Trades Councils, Trade Union branches, co-operative societies, adult schools, &c., in England and Wales. The pamphlet contained a series

of questions which these bodies were requested to discuss and answer. Apart from a free distribution of 25,000 copies, 45,000 copies have been sold since last August. This indicates the widespread interest taken in the question and the extent of the field covered by our inquiries before formulating any proposals for the consideration of your Committee.

The resolutions which we now submit to you originated in the central body of the Association. They were submitted in draft to the nine local districts of the Association, and by them to their local branches (160 in number) and to their affiliated societies. After being considered at branch meetings, they were discussed at representative Council meetings of the districts, to which amendments from the branches and local affiliated societies were submitted. Finally, they were submitted to a meeting of the Central Council of the Association on November 18, 1916, at which 133 amendments sent in by districts and national affiliated bodies (practically all of them embodying points of substance) were discussed and, in a large number of cases, embodied. In their present form they therefore represent the result of the deliberations of the Associations as a whole, arrived at both in its local centres and through its affiliated bodies, and testify to the keen and widespread interest which the news of the appointment of your Committee has aroused in working-class circles.

A few words should be added in explanation of the character of the proposals submitted.

We are fully aware that the proposals taken by themselves may appear to be somewhat cut and dried, and to lay undue stress on questions of organization and machinery. We were, however, expressly authorized by the Central Council of the Association to affirm to your Committee with all possible emphasis that such an interpretation of the motive embodied in the proposals would be directly contrary to the spirit and purpose of those whose views they represent.

In the opinion of the Association, the ideal underlying educational reform, in whatever direction it is undertaken, must be essentially humane and, in the broadest sense of the word, spiritual, and no improvements in legislation or administrative machinery can hope to achieve success unless those who are responsible for their working bear this fact constantly in mind. The object of the proposals submitted is not simply to improve the educational machinery of the country; they have been conceived in the hope and desire that they may serve to set free the spiritual forces which the War has so strikingly brought to light in every section of the people—nowhere more than among the working class—and that they may thus contribute to the promotion of the work of reconstruction which must of necessity fall in so large a part upon the shoulders of the coming generation.—Yours faithfully,

J. MAC TAVISH, General Secretary.

## THE HIGHWAY OF EDUCATION.

### RESOLUTION 1.

That the broad principle of free education through all its stages, including that of the University, be accepted.

### RESOLUTION 2.—YOUNG CHILDREN.

(a) That the age for compulsory attendance at school should be raised to six years, and that it should be compulsory for the Local Education Authority to establish and control a sufficient number of nursery schools for the children within their areas between the ages of two and six;

(b) That attendance at these schools should be free;

(c) That the nursery schools should be under the special supervision of the school medical officer, and attention in them should be mainly directed to the cultivation in the children of good physical habits and healthy bodily development, play and rest, whenever possible in the open air, forming an important part in the curriculum;

(d) That the nursery schools should accommodate small groups of children, and should be so distributed as to be near the homes of the children;

(e) That the head of the nursery school should be a teacher who has special qualifications for the training of young children.

### RESOLUTION 3.—UNIVERSAL FULL-TIME EDUCATION.

We are of opinion that the age for exemption from com-

pulsory full-time attendance at school should be 16, and to this end we recommend:—

(a) That universal full-time education continue to the age of 14, no exemptions being granted under that age, and that no child should leave school until the end of the terms Christmas, Easter, or Midsummer, in which he attains the age of 14;

(b) That it be compulsory for all Local Education Authorities to raise the leaving age to 15 (without exemptions) within a period of five years, and that Local Education Authorities be granted powers forthwith to make by-laws to raise it to 16;

(c) That, when the school leaving age is raised above 14, Local Education Authorities should be required to grant maintenance allowances to children above that age where necessary;

(d) That education during the compulsory full-time period, more especially in the upper standards, should be organized with a view to its continuance during adolescence;

(e) That the employment of children for profit or wages outside school hours during the compulsory full-time school period be prohibited.

## RESOLUTION 4.—HIGHER EDUCATION.

### I. Secondary Education.

A.—PART-TIME EDUCATION (between the age of exemption from compulsory full-time attendance and 18).

(a) That compulsory part-time education of not less than 20 hours per week (including time spent in organized games and school meals) be provided free for all such young persons as are not receiving full-time education;

(b) That the hours of labour for all young persons under the age of 18 be limited to a maximum of 25 per week;

(c) That the distribution of hours throughout the year upon the above basis should be arranged, where necessary, to meet the needs of seasonal industries and other circumstances;

(d) That the education in such schools should be directed solely towards the full development of the bodies, minds, and characters of the pupils; that it should be therefore intimately related to the environment and interests of the pupils, and should contain ample provision for physical well-being including organized games and school meals;

(e) That the teachers in such schools should enjoy status and emoluments similar to those of teachers in other secondary schools.

### B.—FULL-TIME SECONDARY EDUCATION.

(a) That all children admitted to a secondary school should have reached an approved standard of education, the ground of transfer being the fitness of the scholar for the broader curriculum;

(b) That free provision should be made for all who are eligible and desirous to enter such schools, such provision to include a satisfactory maintenance allowance where necessary;

(c) That the number of secondary schools of varying types should be largely increased, and that the curriculum be made more variable to meet the interests of individual scholars;

(d) That facilities should be provided for the transfer from part-time to full-time secondary education;

(e) That the requirements of a liberal education should be regarded as paramount in the organization of every type of secondary school;

(f) That the distribution and organization of secondary schools should be such as to promote equality of access to University education of the highest type for students in every local area.

### II. University Education.

(a) That no student should be accepted as an undergraduate of a University or University College who has not previously attained an adequate educational standard satisfactory to the University Authorities;

(b) That free provision should be made for all who reach this standard, adequate maintenance grants being given where financial circumstances require them; and further, that until such time as free University education is provided the number of scholarships, the value of each scholarship, and the method of selection should be such that no student should be debarred by financial circumstances from becoming an undergraduate;

(c) That greater facilities should be provided whereby men

and women able to profit by a special period of study at a University should be enabled to do so without an entrance examination ;

(d) That all Universities and University Colleges conforming to Board of Education requirements should receive from the State such grants in aid as will enable them to be efficiently staffed and equipped ;

(e) That it should be a condition of payment of State grants in aid to Universities and University Colleges that they make adequate provision for University Tutorial Classes ;

(f) That, since an essential part of the work of a University lies in affording facilities for the advancement of knowledge, more adequate provision should be made for scientific and literary research conducted with this object ;

(g) That workpeople, together with other sections of the community, should be directly represented on the governing bodies of all Universities and University Colleges.

### III. Technical Education.

(a) That, in the interests alike of education and of economic efficiency, a sound general education in childhood and adolescence is the necessary foundation for any specialized course of technical or professional training, both in town and country, and that therefore technical education should be regarded as supplementary to secondary education ;

(b) That, owing to the immense variety of occupations in a modern community, and the wide differences between them, both in the amount of special training necessary to efficiency and the prospects of permanent employment for young workers, it would be impracticable, as well as undesirable, for the State to attempt to enforce any compulsory system of technical education ;

(c) That, since the trades and industries and professions of the country exist in order to serve the needs of the community, technical education should, as far as possible, be divorced from the prevalent atmosphere of commercialism, and regarded as a training in public service ; and that this aspect of the subject should be kept in view in the organization of the courses of instruction ;

(d) That technical schools should be administered by a body on which employers and workpeople chosen by their respective trade organizations should be equally represented, together with members of the Education Authority, and that there should be special advisory committees of employers and workpeople for special trades ;

(e) That close contact should be maintained between Universities and technical institutes, and between technical institutes and schools and workshop practice, and that workpeople should also be represented on the University Committees concerned ;

(f) That, subject to the preceding conditions, an extension of technical and professional education is highly desirable in the national interest ;

(g) That such education should be free, and that until this is provided there should be a generous provision of scholarships with adequate maintenance grants, so that duly qualified students from the full-time and the part-time secondary schools and from evening classes in technical schools, whose special bent lies in the direction of scientific and technical work, may pass forward to full-time day courses of instruction (followed by research) in Universities, technical colleges, and the larger technical schools.

### RESOLUTION 5.—CORPORATE LIFE.

Since experience has shown the great educational value of corporate life in schools, it is necessary :—

(a) That adequate playgrounds and playing fields, with the necessary equipment and free transit to them when necessary, should be provided for all schools ;

(b) That greater freedom of access for children to playgrounds should be allowed out of school hours ;

(c) That children should be encouraged to arrange their own games and other activities, and that facilities should be given for the development of special aptitudes ;

(d) That as far as possible the help of the children should be enlisted in the management of school life.

Further, it is desirable, with a view to the development of corporate life in our schools :

(e) That the greatest possible freedom be given to both

teachers and pupils, and that teachers be not required to adhere rigidly to a prescribed time-table or a fixed syllabus ;

(f) That the growing practice of a common school meal be encouraged ;

(g) That, because of the importance of the development of a sense of beauty in early years, the school buildings and interiors should be designed with this end in view.

### RESOLUTION 6.—PHYSICAL EDUCATION.

That, in view of the general obligation of the State to safeguard the physical well-being of the children of the nation and of the serious defects of their health revealed by the School Medical Service, ample provision for the physical well-being is indispensable to the proper working of our educational system.

With this in view it is necessary :—

(a) That it be compulsory for all Local Education Authorities to set up and maintain such a medical and dental service as will secure adequate inspection and treatment to all scholars attending the schools within the area of the respective Authorities ;

(b) That the system of school meals be so extended and improved as to overcome the evils of under-feeding and malnutrition ;

(c) That greater facilities for physical training should be provided, including the organization of games and the use of simple equipment, and also bathing and swimming where possible ;

(d) That the policy of establishing schools on the outskirts of towns, where facilities for open-air teaching and playing fields can be more easily provided, should be encouraged, with the necessary arrangements for conveyance and common meals ;

(e) That ample provision be made for the fullest possible education of all children who are physically or mentally deficient.

### RESOLUTION 7.—SIZE OF CLASSES.

We are of opinion that no class in any school ought to contain more than thirty pupils, and to this end we recommend :—

(a) That the necessary steps be taken immediately to increase the supply of qualified teachers and school accommodation so as to reduce classes to forty, with a view to a further reduction to thirty ;

(b) That a standard of not more than thirty be adopted for all new and remodelled schools, that a separate classroom be provided for each class, and that the present minimum basis of floor space per child be largely increased.

### RESOLUTION 8.—THE SUPPLY OF GOOD TEACHERS.

To provide an adequate supply of good teachers it is necessary :—

(a) That there be free access to training facilities for the teaching profession, accompanied by adequate maintenance grants where required ;

(b) That the salaries paid and pensions provided should be such as will induce the best men and women available to enter and remain in the profession, with equal pay for equal service ;

(c) That intending teachers should be enabled to pass through a period of study at a University of at least a year's duration before entering the profession, and that the colleges where professional training is provided should be closely connected with a University ;

(d) That every possible facility should be provided for present unqualified teachers to qualify, and that the appointment of unqualified teachers be discontinued ;

(e) That the highest positions in the educational service should be open to teachers who are fitted to fill them.

### RESOLUTION 9.—PUBLIC LIBRARIES.

That, in view of the importance of extending and developing the work of the public libraries in town and country, it is desirable that they should be brought into closer connexion with the general educational system of the country.

With this end in view the separate library rate should be abolished and the provision and upkeep of public libraries should be entrusted to the Local Education Authority as an integral part of the scheme for its area.

## RESOLUTION 10.—DISTRIBUTION OF COST.

(a) That each Local Education Authority be required to submit to the Board of Education a complete scheme of education for its area, together with estimates of the cost;

(b) That 75 per cent. of the total cost of any approved scheme be met by the National Exchequer, but that

(c) The Board of Education be empowered to reduce the grant where:—

- (1) the teaching staff is insufficient in quality or numbers or the salaries paid are inadequate;
- (2) the number of scholars in any class exceeds forty;
- (3) the number and variety of educational institutions are not adequate;
- (4) the medical inspection and treatment and supply of school meals are not adequate;
- (5) the Local Education Authority fails to administer its by-laws;
- (6) where any other part of the scheme is not carried out to the satisfaction of the Board of Education.

(d) That the Board of Education be required to give a special grant to meet the needs of areas where:—

- (1) the school population is high;
- (2) the rateable value is low as compared with the cost of education.

## RESOLUTION 11.—EDUCATIONAL ENDOWMENTS.

That, since the proper use of educational endowments is important to the development of a national system of education, it is desirable:—(a) That a public and intelligible statement should be made periodically as to the amount of such endowments, the sources from which they are received, and the way in which they are controlled and expended; (b) that there should be an inquiry into their origin and history; (c) that action should be taken for their better distribution where this would appear after inquiry to be desirable in the interests of the educational development of the country.

## RESOLUTION 12.—WORK OF THE W.E.A.

That, since the character of British democracy ultimately depends on the collective wisdom of its adult members, no system of education can be complete that does not promote serious thought and discussion on the fundamental interests and problems of life and society, such as is promoted by the W.E.A.; that, while we are of opinion that it is against the best interests and free development of the Association to accept a grant from the State for general purposes, we regard it as necessary, in order that the voluntary contributions to the Association should be free for educational propaganda work, that grants should be made towards the cost of organization of definite and recognized pieces of work such as University tutorial classes and one-year classes. We regard this need as being of national importance, more especially in the difficult period after the War. We therefore recommend:—

(a) That the Board of Education grant to University tutorial classes be equal to 75 per cent. of the tutor's salary, and 75 per cent. of the proved cost of organization and administration;

(b) That the Board of Education grant to one-year classes be 75 per cent. of the total cost of organization, tuition, and administration.

## THE COLLEGE OF PRECEPTORS.

## MEETINGS OF THE COUNCIL.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 29th of November, 1916. Present: Mr. R. F. Charles, Vice-President, in the chair; Prof. Adams, Dr. Armitage-Smith, Mr. Barlet, Mr. F. Charles, Miss Dawes, Mr. Eagles, Mrs. Felkin, Miss Frodsham, Mr. Holland, Miss Lawford, the Rev. R. Lee, Mr. R. Longsdon, Mr. Millar Inglis, Mr. Pendlebury, Mr. Ritchie, Mr. Rushbrooke, Mr. Starbuck, the Rev. Canon Swallow, Mr. Thornton, Mr. Whitbread, and Mr. Wilson.

Diplomas were granted to the following candidates, who had satisfied the prescribed conditions:—Licentiate-ship—William Kingston; Associateship—Arthur George Brown.

The Rev. Dr. Nairn was re-elected a member of the Council.

Prof. John Adams was appointed to deliver the next course of Twelve Lectures on Psychology.

The following additional Examiners were appointed:—

In English, Miss C. L. Thomson; in History, Mr. Taylor

Dyson; in French, Dr. F. A. Hedgcock; in Spanish, Prof. J. M. Villasante.

On the recommendation of the Examination Committee, it was resolved (a) that a Junior paper be set in Political Economy in and after June, 1918; (b) that Senior and Junior Italian papers be set in and after June, 1917 (c) that Senior and Junior Sinhalese papers be set in and after June, 1918; (d) that Senior and Junior papers on the History of the British Empire be set in and after June, 1918.

The Council decided to discontinue the Summer Diploma Examination and, until further notice, to hold the Diploma Examination only once a year—viz., in the winter vacation.

The Council agreed to the incorporation of the Joint Scholastic Agency as a non-profit-making Company.

The following books had been presented since the last meeting of the Council:—

By the AUTHOR.—Bevan's History and Development of Philosophy.  
By GINN & Co.—The New Hudson Shakespeare (Coriolanus, King John, King Richard III, and Romeo and Juliet); Breasted's Ancient Times; Robinson's Medieval and Modern Times.

By MACMILLAN & Co.—Williamson's Foundation and Growth of the British Empire.

By J. MURRAY.—Walters and Conway's Deigma.

By the OXFORD UNIVERSITY PRESS.—Campagnac and Forbes's Sadoletto on Education; Collins's George Eliot Reader; Davis's Political History of France, 1789-1910; Fowler and Limouzin's George Eliot's Scenes of Clerical Life; Hughes's Carlyle's Frederick the Great; Kibblewhite's Dickens's David Copperfield; Pike's Arnold's Sohrab and Rostum; Scott's Lady of the Lake; Sonnenschein's New English Grammar (Parts I, II, and III); Wheeler and Cavenagh's Selected Poems of Tennyson.  
Calendar of University College, Cork.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 20th of January, 1917.

Present: Sir Philip Magnus, President, in the chair; Prof. Adams, Dr. Armitage-Smith, Mr. Bain, Mr. Barlet, Mr. Brown, Mr. R. F. Charles, Miss Crookshank, Miss Frodsham, Mr. Hardie, Mr. Hawe, Mr. Maxwell, Mr. Pendlebury, Miss Punnett, Mr. Rawlinson, Mr. Ritchie, Mr. Rushbrooke, Mr. Starbuck, Mr. Thornton, Mr. Whitbread, and Mr. Wilson.

The Diploma of Associate was granted to the following candidates, who had satisfied the prescribed conditions:—Linette Bartlett Jackson, Margaret Deborah Judd, Henry Robertson.

Mr. Frank Roscoe, M.A., was elected a member of the Council.

The following persons were elected members of the College: Mrs. A. Sadler Gordon, Tower House, Brockley Park, Forest Hill, S.E.; Mr. F. P. B. Shipham, M.A., F.C.P., 19 Westbere Road, Cricklewood, N.W.

Mr. R. F. Charles and Mr. Pendlebury were appointed the representatives of the College on the Joint Committee empowered to conduct the negotiations for the incorporation of the Joint Scholastic Agency as a non-profit-making Company.

Mr. Hawe and Mr. Millar Inglis were appointed the representatives of the College on the Joint Scholarships Board for the year ending February 28, 1918.

On the recommendation of the Finance Committee the Council ordered that the 4½ per cent. War Loan Stock now in the possession of the College be exchanged for the new 5 per cent. War Loan Stock, and that such further sums as the Treasurer may find available for the purpose be invested in the same new stock.

The Council adopted the Regulations for the Commercial Examinations drafted by the Commercial Examinations Committee.

The following books had been presented to the College since the last meeting of the Council:—

By the AUTHOR.—Bevan's Towns of Roman Britain.  
By the CAMBRIDGE UNIVERSITY PRESS.—Lobban's Shakespeare's Cymbeline; Wilson-Green's De Banville's Gringoire.  
By T. WERNER LAURIE.—Hartley and Lewis's Children of the Empire.  
By MACMILLAN & Co.—Siepmann's French Series for Rapid Reading (5 parts).  
Calendar of University College, London.  
Calendar of University College, Nottingham.  
Calendar of Birmingham University.  
Calendar of Durham University.  
Incorporated Accountants' Yearbook.

## THE COLLEGE OF PRECEPTORS.

## EXAMINATION OF FOREIGN TEACHERS FOR CERTIFICATES OF PROFICIENCY IN ENGLISH.

On the results of the Examination which was held on January 1917 Miss Vera Korelina was placed in the Pass Division.

1917.

## THE COLLEGE OF PRECEPTORS

INCORPORATED BY ROYAL CHARTER

BLOOMSBURY SQUARE, LONDON, W.C.

LECTURES FOR TEACHERS  
ON THE  
SCIENCE, ART, AND HISTORY OF EDUCATION.COURSE OF TWELVE LECTURES ON  
THE ESSENTIALS OF EDUCATIONAL PSYCHOLOGY.

To be delivered at The College of Preceptors, Bloomsbury Square, London, W.C., on Thursday Evenings,  
8 February to 22 March, and 3 May to 31 May, 1917.

By JOHN ADAMS, M.A., B.Sc., LL.D., F.C.P.,

Professor of Education in the University of London.

The Course of Lectures (the First Course of the Forty-fifth Annual Series) will begin on Thursday, February 8th, at 6.30 p.m.

The Course is meant to meet the needs of teachers who wish to improve their acquaintance with what underlies the principles of their profession, whether they have any examination in view or not. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with examinations for the Associateship, the Licentiate, and the Fellowship. The reading of the students will be guided, and problems set for their exercise. Every opportunity will be taken of making practical applications of psychological principles to the work of the classroom.

## SYLLABUS.

I. (Feb. 8.) *Psychology*.—Its nature and scope: art or science: definitions: physiological data: demands made upon psychology: its methods and dangers: aspects of psychology—empirical, rational, genetic, collective, &c.: the teacher's use of psychology: the psychological attitude in the schoolroom: the individual and the type.

II. (Feb. 15.) *Consciousness and its Implications*.—Something unique in the universe: relation to physiological functions: treatment as a mere epiphenomenon: relation to awareness: nature of the ego: the non-ego: consciousness essentially bipolar in its higher aspect: self-consciousness in its double sense: subjective and objective: noetic and anoetic consciousness: impenetrability and indefinability of consciousness.

III. (Feb. 22.) *Presentation and Presented Content*.—The inner and outer worlds: sensation, general and special: "the big, blooming, buzzing confusion": inhibition: perception: mental content: the "gateways of knowledge": nothing in the mind that was not first in the senses: immediateness and directness of perception: the *here-and-now* element: apperception.

IV. (Mar. 1.) *Representation and Conception*.—Transcending the *here and now*: the elaboration of the products of perception: the idea or concept made on the premises: the logical concept and the psychological: the old view of the concept as static: the new view as dynamic: the series—*percept, image, generalized image, concept*: presentative activity.

V. (Mar. 8.) *Mental Focus*.—The field of consciousness: focal and marginal areas: the manipulation of consciousness: not necessarily concentration: attention essentially a prehensile process: *nisic* and *anisic* attention: unstable equilibrium of *nisic* attention: nature and function of interest: the rhythm of attention: concentration and diffusion beats: the mechanism of attention.

VI. (Mar. 15.) *Recall*.—Mediate and immediate recall: reverie, reminiscence, and recollection: both memory and imagination depend upon recall: creation *versus* reproduction: differentiation between memory and imagination: rational and verbal memory: productive and reproductive imagination: dated and undated memory: the aesthetic and the scientific imagination.

VII. (Mar. 22.) *Intuition*.—Nature of intellect and its relation to knowledge:

Bergson's view of the limitations of intellect: the intuitive method: spirit develops towards intellect on the one hand and towards instinct on the other: the two poles—man and insect: knowledge may be acquired by intuition without the aid of intellect: intuition precedes analysis.

VIII. (May 3.) *Invention and the Mental Flash*.—Place of invention in school work: why it has been so little dealt with in school: wide range of invention: pupil is inventing all the time: two ways of learning—stepwise and totalwise: the mind works totalwise in invention: the place of "the problem" in school exercises: school training in invention: the *flash* of insight.

IX. (May 10.) *Instinct and Habit*.—Nature of instincts and their relation to intellect: educability and eradicability of instincts: their function in the race and in the individual: relation between instinct and habit: Rousseau's condemnation of habit-forming: place of consciousness in relation to the habitual: accommodation and correlation: the "bundle of good habits."

X. (May 17.) *The Affective Aspect*.—Every intellectual process has an accompanying affective tone: the Freudian dissociation: the emotions and their control: the mechanism of the emotions: their function in spiritual life: their manipulation by the educator: distinction between the emotions and the sentiments: McDougall's theory of the relation between the emotions and the instincts.

XI. (May 24.) *The Will and its Training*.—Dæmonic view of the will, and its dangers: personality and character: the theory of the "inner court": nature of motives: the fallacy underlying the phrase "the strongest motive": desire and will: origin of the will: possibility of training the will: meaning of the terms "weak will," "breaking the will": *aboutia*: educational implications of the freedom of the will.

XII. (May 31.) *Experimental Psychology*.—Fundamental assumption underlying this branch of psychology: special characteristics of this branch: experience and experiment: free experiment and laboratory experiment: instruments and methods used in experimental psychology: the statistical method: correlation and other formulæ: relation between experimental psychology and experimental pedagogy.

## FEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

\*. Members of the College have free admission to the Course.

## 450 MEDALS & PRIZES !!

### STUDENT'S ELEMENTARY

# BOOK-KEEPING

By ARTHUR FIELDHOUSE, Accountant,  
66 West Parade, Huddersfield

who will forward copy Index and Specimen Pages on receipt of Post Card addressed to Box A 27, Huddersfield.

364 Pages. 21st Edition. Post Free, 2s.  
100 Exercises. 350 Questions.

Teacher's Specimen Copy, from Author only, 1s. 4d.

The ONLY TEXTBOOK to which there is a FULL KEY.

While this textbook more than covers all Elementary Examinations in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the Society of Arts, West Riding County Council, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.

The Exercises and the principles introduced therein are so carefully graded in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The Questions will be found very useful for testing the student's knowledge at each stage of his work. Examination Papers of the Society of Arts, the W.R.C.C., and College of Preceptors are included.

London: SIMPKIN, MARSHALL, HAMILTON, KENT & Co., Ltd.

## THE STUDENT'S

# BUSINESS METHODS

and

## COMMERCIAL CORRESPONDENCE.

By ARTHUR FIELDHOUSE, Accountant,  
66 West Parade, Huddersfield,

who will forward Specimen Pages and Index on receipt of Post Card addressed to P.O. Box A 27, Huddersfield.

Eighth Edition. 380 Pages.  
2s. 6d. Post Free.

80 TEST and EXAMINATION PAPERS,  
containing 1,300 QUESTIONS.

This is the only practical, up-to-date book on Commercial Correspondence and Office Work, and is characterized by the qualities that have made the author's other textbooks so popular. The lessons are well graduated, and the teacher is saved the drudgery of preparing Test Papers, one of which follows every chapter, in addition to numerous Examination Papers. PRACTICAL Work is provided in the Series of Business Transactions included in some of the Test Papers. It is the only Complete Guide, covering all the Elementary Examinations. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. Efficiency should be the first consideration. It is an excellent Handbook for the Junior in the Office. Teacher's Specimen, from Author only, 1s. 7d. post free.

London: SIMPKIN, MARSHALL, HAMILTON, KENT & Co., Ltd.

## THE

# School World.

A MONTHLY MAGAZINE OF EDUCATIONAL  
WORK AND PROGRESS.

THE aim of "The School World" is to provide teachers with information of practical and permanent value. To this end all important changes and developments affecting education are dealt with by leading authorities and experienced teachers.

The magazine is indispensable to all educational workers who desire to keep in touch with modern methods of education.

### A PROGRAMME OF EDUCATION REFORM.

ISSUED BY THE EDUCATION REFORM COUNCIL,  
NOVEMBER 1916.

The Education Reform Council was founded in April at a Conference called by the Teachers' Guild. The work of the Committees is incomplete, but, in view of its urgency and importance, the following programme is published in advance of the full report, which it is hoped to complete early next year. (It is to be understood that reference is made to both sexes in all cases except where otherwise stated.)

*Aim.*—The reforms proposed have as their aim to widen educational opportunity; to train all for work and leisure; to utilize more effectively national resources, human and material; to fit the growing generation for the service of home, society, and the State; to admit all to the quest for goodness, truth, and beauty; to make better citizens.

#### I. EDUCATION AUTHORITIES.

1. The Ministry of Education should hold a higher place in the hierarchy of the offices of the State, and the salary of the Minister should be equivalent to that of other Principal Secretaries of State.

2. Progressive organization is hindered by certain statutory distinctions between higher and elementary education. Local Authorities for higher education should be obliged to supply or aid the supply of higher education, and the limit of 2d. to the higher education rate in the county areas should be removed.

3. For the purpose of co-ordinating the activities of Local Education Authorities with those of the Universities and institutions for higher education, the country should be divided into educational provinces, the areas of which should be larger than those of the existing Local Authorities. (See II, 11.)

4. While the recently created Medical Service, Central and Local, has already rendered great aid to education, it is evident that what has been is but a tithe of what ought to be effected. The main result to be expected from a great extension of the school medical service is an advance in public health, in which direction a wise policy may produce a manifold financial return in national efficiency, and a gain in morality, health, and happiness (at least in the prevention of misery and crime) not expressible in figures.

5. There should be increased provision for the care of children

under school age, and steps should be taken to secure parental responsibility.

6. Worthy private effort in education should be encouraged. With proper safeguards as to efficiency and accessibility, schools under private management should receive State aid. The Board of Education should make adequate provision for the inspection of all schools.

7. The classes carried on under Joint Committees of the Universities and the Workers' Educational Association are doing work which is of national importance and deserves increased State support. If the existing grants to the three-year and one-year classes were augmented, the admirable work now done could be successfully extended so as to reach the large number of working men and women for whom present funds cannot provide.

## II. THE CONTINUITY OF EDUCATION.

1. The principle of continuity must be carried out effectively in all branches of education; lower educational institutions being linked to higher by well planned promotion of pupils and by attention to desirable sequence of curricula. Educational institutions should be brought into relation with professions, commerce, industry, agriculture, home-making.

2. The years from age fourteen to seventeen are educationally fateful. Organized education must continue for every boy and girl until at least the age of seventeen.

3. In elementary\* schools children should receive full-time education until at least the end of the educational half year in which the fourteenth birthday occurs. Thereafter part-time education should continue until the age of at least seventeen, in the daytime, for an average of three half days per week or an equivalent period per annum.

4. The elementary-school system should be entirely recast so as to provide—(a) primary departments, or schools, for ages from about five and a-half to eleven and a-half; (b) middle† departments, or schools, for ages eleven and a-half to fourteen and a-half, with optional attendance until fifteen and a-half; (c) Continuation‡ departments or schools. The middle departments may be organized with either the primary or the continuation departments, or the three departments may be organized as a single institution.

5. Varying types of continuation schools should be encouraged; but these will probably fall into two groups: Group A, for pupils whose occupation may provide a study of real cultural value—e.g. technical work in commerce, industries, agriculture, house-craft. Group B, for pupils whose occupation is temporary or fails to provide a study of real cultural value—e.g. vanboys, labour of insignificant skill. In Group A a school for an industry, or allied group of industries, should be recognized as likely to give a good training in citizenship, and the work should have a vocational bias. Plans for development should be based on experience gained in England and elsewhere, and attention should be paid to the provision which has been made by public-spirited employers and to the work already done in women's institutes and in trade schools, especially in London. In Group B schools, education cannot satisfactorily be centred round the present occupation. In no school of either group should the work be restricted to vocational subjects, as in both groups the aim is (a) to fit for citizenship, (b) to develop personality and encourage individual bent or capacities, (c) to meet physical needs. The continuation school must be really a school, with a corporate life of its own.

6. Reduction in the size of classes in elementary schools is an urgent need.

7. The transfer from primary to secondary schools, or from preparatory departments or schools to secondary schools, should take place usually between the ages of eleven and twelve. The 25 per cent. free-place system is illogical in principle and unsatisfactory in practice. Junior scholarships and free places should be provided in such numbers as will admit to secondary schools those pupils from elementary or preparatory schools who can profitably undertake a full

\* The use of the term "elementary" throughout the programme does not imply approval of the term or of the statutory limits associated therewith.

† The Council is not committed to the view that the teaching in these departments would be "elementary" in character.

secondary course. Where a system of higher elementary or central schools is established a further selection of the elementary-school children at age eleven to twelve should be made for promotion to such central schools for a four-year course, assistance being given by the Education Authorities.

8. The number of efficient secondary schools of varying types should be increased. Schools provided by the Local Education Authority should have separate governing bodies with real administrative responsibility. The Consultative Committee have advised the strengthening of the higher work of secondary schools, and the Reform Council considers that schools taking the lower grant should receive grants for this purpose. Pupils at any school recognized as efficient by the Board of Education should be eligible for State scholarships for prolonging secondary education, or tenable at the Universities. Many capable students will continue to be debarred from the Universities, with consequent loss of national efficiency, if these scholarships are limited to "Aided" schools.

9. In secondary schools, including endowed and public schools, pupils should remain as a rule until the end of the term in which the seventeenth birthday occurs. Financial provision should be made to enable suitable pupils to continue at school until they enter the University.

10. The Reform Council expresses complete agreement with the view advanced by the Consultative Committee that large additional funds should be provided by the State for scholarships for higher education. The amount suggested—£329,500 per annum—is not too large.

11. The selection of students for scholarships to the Universities and institutions for higher education should be based upon an expert review of the relevant qualifications rather than upon a central competitive examination. Such relevant qualifications are the school record, examination record, probable career, general personal fitness. The amount of assistance given should be such as to enable the scholar to live in a manner befitting a University student during the normal course required for graduation, and for the necessary post-graduate preparation for professional practice. For most professions, and for research in Pure Science, at least one year of post-graduate preparation is necessary. In determining the number and incidence of the awards, the main consideration should be the national need to strengthen the learned professions (including teaching), and to further industry, commerce, and agriculture. The Board of Education should allocate grants for higher scholarship purposes to the Provincial Boards (see I, 3): the Provincial Boards should make the awards, their action being co-ordinated by the Board of Education or by a special national board.

12. The attention of the managers of large commercial and manufacturing undertakings should be called to the Appointments Boards, which in most Universities are now giving reliable help in the selection of graduates suitable for different types of responsible work. If the guiding minds of the Universities keep in touch with leaders in the professions and industries, the claims of liberal education and of utilitarian efficiency may be harmonized.

13. Attention is drawn to the national and imperial need for an increased number of women doctors. The Higher Scholarship scheme should be specially enlarged to provide full training for suitable women for the medical profession.

14. Social service is requiring a large number of trained and experienced workers. The action of those Universities and Colleges who have established courses and diplomas for Social Study is to be welcomed, and should supply women as well as men well prepared for some of the numerous public posts created during the last few years. Work of this kind should be adequately remunerated.

15. Secretarial assistance should be provided for all but very small schools: the absence of such assistance is uneconomical, causing serious waste of the teachers' influence and personality especially on the part of the head teacher.

## III. THE SUPPLY AND TRAINING OF TEACHERS.

1. Educational progress depends upon the possibility of securing trained men and women with the necessary spirit and ability. So far as men are concerned, the situation is bad, and is certain to become worse. Before the War the requisite number of men was not obtainable, and fewer were

coming forward than were needed to fill vacancies; the quality was frequently disappointing. Now war has depleted the too thin ranks. A complete revision and substantial improvement of the scales of salaries should be made at an early date, in order to attract to the schools suitable men and women. Pensions should be provided on the Civil Service scale. Half measures, such as verbal persuasion and doles towards training of those who do not feel any bent towards the work, are futile. To recruit men and women of high purpose and needed ability, the teaching profession should draw from the Universities side by side with other professions. Teaching should be reckoned among the professions to be strengthened by the higher scholarships scheme.

2. In order to increase the efficiency of public schools and other endowed schools for boys, especially on the intellectual side, they should be staffed by men whose professional equipment includes training in the principles and practice of education; but this should not be achieved by lowering the standard of personal and academic qualifications.

3. More candidates for teaching in elementary schools should take a University degree before entering a training college, and the general standard of training should be raised.

4. On the completion of the usual training and probationary courses, modern language teachers should be assisted to live for a period of twelve months abroad, in a *milieu* not entirely academic, in order the better to understand the character and ideals of the country whose language they propose to teach.

5. It is desirable that teachers of commerce should have actual commercial experience as well as academic and professional training.

6. Provision should be made for special courses, or for special colleges, for training specialist teachers of handicraft. If such training is being given at an institution with an extensive range of workshops (e.g. at a polytechnic) it will be advantageous to allow the persons being trained to have from time to time the free run of the workshops.

7. To supply the varying needs of different types of schools it will be necessary to utilize the services of artisan instructors in addition to those contemplated above. Such instructors should receive a special course of pedagogical training.

8. The scheme of physical training given to teachers should incorporate the hygiene of physical exercises.

9. Opportunity should be given for women students who purpose being senior school teachers to take a special course of mothercraft and associated hygiene subjects. This might be taken within a post-graduate course of training, or as a post-training course by non-graduates.

#### IV. TRAINING OF CHARACTER.

1. The influence of home is the earliest, and probably the most permanent, element in the formation of character; the value of good parental influence cannot be overstated. The right kind of parental authority is jeopardized by certain tendencies—e.g. foolish indulgence, showing itself in a sentimental resentment at even proper discipline; conditions of modern industry, by which the father is away from home while the children are about; modern housing conditions, making real home life impossible for many working-class families; the increase of State intervention, leading to a weakening of parental sense of responsibility. In some measure these dangers may be reduced by (a) more provision for the instruction of young parents in the moral problems connected with the upbringing of children; (b) closer co-operation between school-teachers and parents.

2. Large classes are a serious hindrance to character training.

#### V. CURRICULA.

1. It is understood that the necessary arrangements will be made for religious and moral instruction.

2. In all schools there should be great attention to English spoken and written.

3. The curriculum for children under eleven (or twelve) in preparatory or primary departments or schools (including those preparatory to the endowed public schools) should include (a) physical training, games, dances, and other eurhythmical exercises; (b) handwork, based mainly on such primitive arts as pottery, weaving, basketry, needlecraft;

(c) drawing, with crayon, brush, and pencil; (d) language, including intelligent reading and learning by heart of suitable verse and prose, training of the voice in speech, writing, oral and written composition; (e) simple mathematics, i.e. the elementary study of number and space; (f) history and geography; (g) the beginnings of science, by study of environment and of plants and animals; (h) vocal music and musical appreciation. It is recognized that manners, care of person, cleanliness, tidiness, should be supervised and directly taught in all schools.

4. The curricula of the middle departments of elementary schools should be framed as the earlier part of an educational course to be completed at seventeen through part-time departments. As a natural sequence the continuation part-time curricula will include varied developments of the work begun in the middle department, especially those parts more suited to increasing maturity of mind and physique. In Group A schools (see II 5, above) part of the course will have direct reference to the daily employment.

5. The minimum curriculum for a pupil from eleven to sixteen in a secondary school should include (a) English; (b) history; (c) geography; (d) a foreign language; (e) mathematics; (f) science; (g) vocal music and musical appreciation; (h) drawing; (i) manual work; (j) physical training.

#### VI. EXAMINATIONS FOR JUNIOR SCHOLARSHIPS.

1. The following affords a satisfactory scheme for the examination for the award of scholarships or free places to be held at a secondary school, the children being approximately eleven years old and coming mainly from the elementary schools. A written examination, restricted to arithmetic and English composition, should weed out the weaker candidates and give evidence of the capacity of the more promising. This should be followed by a brief oral examination of the children who stand the written test satisfactorily.

2. The school record or head teacher's report should be taken into account in selecting scholars. Cases of marked discrepancy between the teacher's report and the results of the written examination should receive special attention at the oral examination and by review of relevant circumstances. The head teacher's report should refer to unusual aptitude in drawing, handwork, or subjects outside the ordinary curriculum, in the cases where such aptitude is truly exceptional.

3. At the oral examination the candidates should be asked first to read aloud a short passage on which questions may be put to test general knowledge. Further questions should address themselves in part to the special bent indicated in the school report.

#### VII. RESEARCH IN EDUCATION.

1. Education is intended to train developing minds, a process the efficiency of which requires a knowledge (a) of the minds to be trained, (b) of the laws of mental development, (c) of the most effective methods of mental training for varying individuals or types. Such knowledge, to be reliable, can be obtained only by special research. England at present lags behind other great nations in respect of giving official support to individual research and in organizing large-scale research in education. Valuable research has been carried out by individuals, but the benefit which should result is largely lost through lack of organization and insufficient publication.

2. There should be established a central institute for educational research, which should work in close connexion with the Board of Education and the teaching profession.

3. The formation of local research institutes and educational libraries by the larger Local Authorities should be encouraged. Such local institutes could usefully begin work on a small scale.

4. In addition to the demonstration schools already required by the Regulations, selected training colleges should have experimental schools. The work should not necessarily be limited to elementary education, and should be carried out under the guidance of the college staff.

#### VIII. HEALTH AND MEDICAL SERVICE.

1. The persons whose influence on the health of children is greatest are the parents, the children themselves, the medical adviser (school officer or private practitioner), the

teacher, and, later, the employer. Efforts should therefore be made to instruct parents, teachers, and employers in their responsibilities in relation to the health of the young who are under their control. The school medical officer should have opportunities of observing the actual hygiene of schools, beyond that which is afforded by routine health examination of school children.

2. All schools (including public and private secondary schools) should be medically inspected by a public authority. A report or certificate should be furnished to the governing body or proprietors of the school, dealing with the suitability of the environment, accommodation, air space, desks, &c., cleanliness, lighting, ventilation, and sanitary provision. The intervals between school inspections should not exceed five years.

3. All children attending school should be medically inspected annually. The parents should have the option of producing the required information, at their own expense, from their own medical attendant, in a form acceptable to the school medical officer. The school medical officer should visit at least once each term, and should conduct routine examinations annually. He should examine special cases when requested by the head teacher, who may ask for authoritative instruction for remedial action to be sent to the parents. The head of the school should have opportunity for consultation with the school medical officer with reference to individual cases. The medical officer can often give valuable advice as to the choice of suitable careers for pupils after leaving school. The practice of parents consulting medical advisers on this point should be encouraged.

4. More air-space and better ventilation should be provided in the classrooms of elementary schools.

5. The most urgent need for the public health is abundant playing space for the children. Sufficient exercise for the young means better health and efficiency in adult life. In all towns ample play centres should be provided for the use of children in and out of school hours, equipped with simple apparatus and in charge of supervisors who understand children, and can fully enter into and guide their spontaneous activities.

6. In order to be effective, physical exercises should be given daily for at least twenty minutes. Proper gymnastic or games costume and shoes should be provided. Physical education should be many-sided, to serve æsthetic as well as developmental or remedial ends. Games should include stretching exercises particularly in girls' schools: hence swimming, netball, and lacrosse should be encouraged.

7. The teachers of physical exercises should attend the medical inspection of pupils (except for parents' option as above).

8. Research is needed into the exact effect of different forms of exercises on children of different sexes, ages, and physique; particularly as to their effect on the personal health of girls and possible influence on parenthood.

9. Every town should have access to a psychological clinic for its children.

10. A weekly bath under school auspices should be secured for all children attending elementary schools.

11. Of all expenditure on public health, school dentistry is probably the most economically efficient. An annual dental inspection of all children of school age is highly desirable.

12. Some factories employing young people allow thirty minutes off-time every day, during which the young employes are suitably exercised under trained teachers. This action is worthy of wide imitation.

## L'INGÉNUË.

By MARION CAHILL.

### I.

CHÉRIE is packing her box for the last term at school. She is singing as she moves about her room. Going to the dressing table, she takes up a dainty little white box, which she hastily hides behind her as her mother enters the room.

"Chérie, darling," says her mother, "do not forget to put the warm vests in your box. The Spring is apt to turn cold suddenly."

"Mais oui, maman," answers her little daughter, dutifully.

"And, *mignonne*," pursues the fond mother, taking Chérie's chin by her finger and thumb and turning her face gently to the light, "you would not dream of putting any—any—cosmetics on your face, would you? That is only for the vulgar, not for the *jeune fille bien élevée*."

"Mais non, maman! Ce n'est pas possible! Quelle drôle idée!"

Her mother, satisfied, goes out.

Chérie brings the dainty little white box to the front and reads its superscription fondly. On the lid, in letters of gold, runs the fascinating legend—

Pour la beauté des dames  
Adhérent et invisible.

Running across the room, she pushes it deep down into the inmost recesses of her trunk.

"C'est ça," she murmurs, thankfully.

### II.

Chérie at school is busy writing a letter.

"You do not write such long letters as you used," says her friend, who is sitting next to her. "Always you leave the last sheet a blank. What waste!"

The French are amazingly economical in the use of note-paper. The thriftiest English person is a reckless spendthrift compared with a "careful" son or daughter of France.

"I have nothing to say," answers Chérie. "Soon I shall be home *pour toujours*!"

In the school, letters are censored—that is to say, the children's letters, both those arriving and departing, are read. It is a wise custom, and prevails in many English boarding schools also.

"I do not mind having my letters read," proclaims Chérie, loudly. "Nous petites Françaises, nous sommes si candides!"

To-day, having apparently finished her letter, she departs. But, later, she takes out the letter and a small bottle containing a colourless liquid, and proceeds to fill the blank page. At the end of her handiwork she holds up the page to the light. There is nothing to be seen—the writing is invisible. For once the advertisement on the bottle tells the truth.

She has written nothing harmful—it is all the most innocent nonsense. But she has Latin blood in her veins, and she will intrigue even if it is only over the surreptitious purchase of a few chocolates.

At first I could never understand why French girls are kept under such strict *surveillance*—there is no connexion between English "supervision" and French *surveillance*. Of how few French words are the English "equivalents" really exact! They convey more or less meaning, but hardly ever the same meaning.

But I understand now why this *surveillance* is necessary. It is not that the French girl is either better or worse than her little English sister. She is different, that is all. She has passionate Southern blood in her veins, she loses her head quickly, is impulsive and often reckless. Heaven knows what mischief she would get into if she were not guarded! And, when that hot-headed careless youth is over, there is not a more capable or more serious-minded woman than a Frenchwoman.

### III.

Chérie is putting out her white frock, and shaking its snowy folds. It is of embroidered muslin. She had desired a white silk, and her mother and father were quite willing that she should have it. But, at the last moment, just as they were going to purchase it, her father's sister's husband's

cousin twice removed, called and said that muslin was more appropriate for an *ingénue*, and, in spite of Chérie's tears and temper, muslin it had to be.

*L'ingénue* fled to her room.

"Ah!" she cried; "they dare not treat me like this if I were married! It is because I am Mademoiselle! Wait—wait until I am Madame!"

Now, as she adjusts the pretty frock to her pretty figure, she remembers regretfully that, but for the interference of a distant relative, it would be silk.

"I wish I were an *Anglaise*," she thinks. "In England, that so happy country where everyone is free—even the *jeune fille*—there are no relations to *agacer* one. There, in that happy island, each goes her own way—she is not pursued by the cousin of the husband of the sister of her father!"

#### IV.

To be really independent the French girl must be married. Only so does she achieve freedom. She escapes one bondage by assuming another. The new yoke she does not mind, because husbands can always be "managed." Then, too, the French marriage is often true double harness. The bride has generally a dot, and is often a bread-winner besides contributing her quota to the upkeep of the *ménage*. The system of the dot is a very good one for the girl; it makes her independent of her husband to a certain extent, and therefore more self-respecting. But I do not think it is equally good for the husband. There must be many a moment when the bride wonders which was the supreme attraction—herself or her money. Then, too, the position of the husband is higher or lower in the social scale according to the size of the dowry. After all, there is something to be said for the despised English system—marriage for love or not at all.

Chérie is so anxious to escape from her annoying relative that she is determined to marry at all costs. She has begun to take steps. Her uncle, the *curé*, is her confidant. He, too, is anxious to see Chérie settled, and, with the mingled simplicity and kindness of a French priest, he has undertaken to find her a husband.

"I know a very good boy. At present he makes his examinations, but after he will have a very good position. *Non, mais!* He is not in Paris, but in the country; but when he comes to Paris you shall see him."

"And," said Chérie to me later, "we shall live in the country. I would prefer Paris, but one cannot have everything, and, after all, it will be better for the children."

"What children?" I asked, surprised.

"Our children," said Chérie placidly, and without turning a hair.

The mingled innocence and sophistication of French girls is a constant source of surprise to me.

One day, watching a regiment of Highlanders swinging past in kilties, with the bagpipes skirling, Chérie exclaimed: "Those knees, there! I find them shocking!"

"They are splendid," I exclaimed indignantly. "I've never seen a more magnificent set of men."

Later, in a perfectly innocent book that one of the elder girls was reading, there came an expression: "Elle marchait autour de la chambre en pantalons brodés."

"Do not translate," I said. "Go on." But already Chérie had read aloud: "She marshed arround ze rrrroom in embroidaired trousaires."

"*Qu'est que c'est* shocking in that?" she asked brightly.

"Nothing in your version," I answered. "Go on."

But the marriage of Chérie and Jules Adolphe depends on many contingencies, not the least of which is the War.

I have fancied that she is not quite so keen on it as heretofore. I find the reason is that the annoying relative has changed very much. She has, alas, lost her husband and her two sons at the front, and I think she will never have the heart to interfere over a muslin frock or anything else of Chérie's again.

#### V.

Chérie is a *marraine*. She has "adopted" an unknown soldier at the front. He writes to her most gravely and respectfully, "My dear Godmother." And she replies demurely, "Dear Godson." She advises him about his health and his soul. She has sent him a medal of his patron saint, and he

has responded with the helmet of a *Boche*, which he had converted into a very pretty flower basket.

"I think he is handsome," said Chérie dreamily, "with beautiful brown eyes and a moustache."

"He is probably forty-five, and a *père de famille*," I answered cruelly.

He, poor man, evidently thinks he is corresponding with a white-haired old lady, or so some of his remarks would lead one to expect.

\* \* \* \* \*

They have met. He is fifty, with a beard, and he wears spectacles. Chérie had expected the Apollo Belvedere, and was bitterly disappointed. The rôles, however, are reversed. He has adopted *her*, and is going to introduce her to his own daughter, who is of the same age as Chérie.

"Thou wilt be a good companion for her," he said gently. "Thy letters were *bien sérieuses* and *très sages*."

#### VI.

Essential wit is common to the human race, and is understood by every nation. But each nation in course of time produces a humour of its own, which is individual to it, and only appreciated to the full by those who have produced it.

I would as soon think of quarrelling with racial characteristics as with the sun for rising in the east, or with a dog for wagging its tail.

I saw, a little while ago, in one of our papers, a story of some people who, lost in the fog, wandered up and down the same street for hours, and at last in despair knocked at a door to ask their whereabouts, and found it was their own house.

I showed this to a Frenchwoman. She laughed so much I began to wonder if it had unsuspected points. "*Quelle méchante histoire!*" she said.

I read it again bewildered. And then, in a mistaken moment, I began to explain. I ought to have known better. Months ago I took to heart the advice of dear Thomas à Kempis to "leave everyone to his own way of thinking."

And, at the end of a wild-eyed half-hour, I gave it up.

Later, I heard her relate it to another of her compatriots.

"Oh, la, la!" she exclaimed. "*Quelle méchante histoire!*"

What is there in that innocent little story that is so very naughty? I am still wondering.

So, when I saw Chérie with a book of Captain Bairnsfather's sketches, entitled, "Fragments from France," I knew something interesting was coming.

Everyone knows the cover: "Well, if you knows of a better 'ole, go to it."

Chérie regarded it seriously. "How could he go, Mademoiselle, in that terrible firing?"

"How, indeed?" I answered lightly.

When she came to the "strawberry jam" episode, she said to me thoughtfully—

"Why does everybody in England love jam, Mademoiselle?"

"They don't," I replied. "I don't, for one."

"Well, everybody but you," she said.

I overheard two young French officers discussing this sketch. One was explaining it to the other.

"It refers, of course, to the national love of *confitures*," he said, gravely.

"Ah, ça?" said the other, politely.

#### VII.

"Next Sunday," announced Chérie, "I shall be at home. Ah! *quel bonheur!*"

"And what shall you be doing this time next Sunday?" I asked.

"I shall be sitting in the Bois with my parents making mock! Oh! it is lovely to make mock! Do you make mock in England, mademoiselle? Of everyone who passes I say something. 'Monsieur walks like an elephant; Madame like a crab.' Oh! It is lovely to make mock!"

"It does not sound very polite," I remarked. "In England we do not permit personalities. If we cannot be funny without, then we must be silent, that is all! *C'est triste, ça, n'est-ce pas?*"

But the truth is the French are a nation of *moqueurs*!

If a French man, woman, or child thinks of a *bon mot*, out it must come, whatever the subject, whether sacred or profane.

One can generally tell what the French mean by looking at their eyes. They, apparently, have not the same control over their eyes as over their mouth. Often when the mouth is smiling, the eyes are hard and mocking; and when the mouth is severe, the eyes may be gentle in expression.

### VIII.

Naturally, there are as many types of French girls as there are individuals. But the average French girl is a bewildering mixture of grave and gay, innocence and sophistication. Her worst faults are vanity and selfishness, with a casual insincerity.

Chérie will not admit that she has a fault. She is not vain; she merely conserves the gifts with which *le bon Dieu* has endowed her. She is not selfish; she is only protecting herself against other selfish ones. She does not tell untruths; she merely tells as much of the truth as she thinks it expedient for her elders to hear.

Her most dangerous quality is her love of emotion. One day I had found fault with Chérie for some work which was badly done. Some hours later she was still in floods of tears.

"It is foolish to cry like that. You should learn to control yourself," I said to her.

"Ah! it is so nice to cry," she gasped. And I felt that she was thoroughly enjoying herself.

She is generally gay, often *insouciant*, sometimes *capricieuse*, and—shall I say it?—she is *un peu intrigante*.

But, with it all, she is gentle, grateful, and affectionate—in other words, innocent, but not ignorant, she is a true type of the French *ingénue*.

## REVIEWS.

*A Defence of Classical Education.* By R. W. Livingstone. (4s. 6d. net. Macmillan.)

Mr. Livingstone's subject may be approached from two standpoints. "The claim of Latin and Greek to a place in education" is one thing: it is quite another to maintain, with Prof. Hofmann, "that all efforts to find a substitute for the classical languages, whether in mathematics, in the modern languages, or in the natural sciences, have been hitherto unsuccessful; that after long and vain search we must always come back finally to the result of centuries of experience; that the surest instrument which can be used in training the mind of youth is given us in the study of the languages, the literature, and the works of art of classical antiquity." Mr. Livingstone adopts the more modest standpoint, and makes out quite a good case for the classics as an instrument of training. With all that he says, in his two delightful chapters on the case for Latin and Greek, most of his readers will cordially agree. His claims for humanism will be at once granted; but the fundamental question remains whether Greek and Latin are entitled to a monopoly of humanism. The really valuable part of the book lies in Chapters V and VI, where the author faces his problem by dealing with the educational advantages of the classics, illustrating by reference to grammar and prose composition. In comparing Greek with the modern languages, Mr. Livingstone tells us that "the topic requires a book." We cordially agree, and can only regret that he has not seen his way to write such a book instead of the present one. His treatment of the technical aspects of grammar is in the highest degree interesting, and carries much more conviction than his charming generalizations on the literary merits of classical authors.

Though Mr. Livingstone tells us that there is no science of man, and that "it is very hard to assert anything definite in education, because of the great difficulty of knowing the precise effect on a boy of any particular branch of study," he himself demonstrates, in his analysis of the mental effect produced by the study of the accurate shades of meaning of the Latin sentence, that at least a beginning has been made in the scientific investigation of educational processes. But it is a significant fact that a writer of the breadth and culture of

Mr. Livingstone should venture to discuss a subject such as he has chosen without the slightest reference to modern psychological investigations. He gives no evidence of ever having heard of the vexed question of Formal Training, and makes no reference to the newer statistical methods or to the applications of the correlation formulae. He may not believe in the newer forms of psychology, and may regard with suspicion the new-fangled formulae, but he can hardly expect to be taken seriously if he persists in disregarding the modern methods adopted in dealing with the matters of which he treats. The problem is not nearly so simple as this book would lead us to believe. Mr. Livingstone tells us that "in this country traditions take the place of theories"; but he does not work out the implications. Had he done so he would have been led along a path that makes for illumination. Some of his remarks, however, show that he is not far from grace in this matter.

The last chapter treats of reforms, and deals in a broad and sympathetic way with what is, and what might be, in the teaching of the classics in our schools. It is quite likely that this chapter will attract more attention among schoolmasters than any other part of the book, since it concerns itself with compulsory Greek and other burning topics. We cannot sufficiently praise the admirable spirit in which contentious matters are here treated. There is a sweet reasonableness and a persuasiveness about the arguments that cannot fail to impress every fair-minded reader, whatever his prejudices. In point of fact, there is nothing in the book more likely to impress the philistine than the honesty with which the author admits weaknesses and sets about suggesting remedies.

Mr. Livingstone is rightly concerned about the need for a new and fresh appreciation of the subject-matter of the classical writers. He pleads for what Oliver Wendell Holmes would call a "depolarization" of the common texts. We cordially agree; but we would remind him that the depolarization need only apply to the teachers. The pupils always come fresh. Besides, it must be remembered that the very need for depolarization is accompanied by the compensation that the constant use of the same texts has led to a perfection of the teaching technique that is commonly regarded as one of the main advantages of classical education. We hope that Mr. Livingstone will realize that the writer of this review is no opponent of the teaching of the classics. We who have gone through the mill, and have invested many years of time and energy in the study of the classics, cannot read this book without a certain glow of satisfaction. Our conviction is reinforced that our study of Latin and Greek has not been in vain. But we doubt whether the new generation will be satisfied with this orthodox and scholarly presentation of the case. The younger people who are giving themselves up to the study of education will, we fear, ask certain questions to which no answer is provided in this volume.

At the foot of page 233 is begun a sentence that does not end intelligibly. We hope that it is an intuitive foreknowledge that has caused Mr. Livingstone to turn the Vice-Chancellor of Leeds into a knight. The book has no index.

*Chart of the Natural Progression and Co-relation in School Subjects from the Child's Point of View.* By Isabel White Wallis. (1s. 6d. net. H. K. Lewis.)

We have here a huge chart on which is set down a scheme of work for children, arranged by ages in periods of two years—eight to ten, ten to twelve, twelve to fourteen, fourteen to sixteen (eighteen). It is built on concrete foundations already formed in Froebel or Montessori schools or in home life. "It is not a school time-table, but a suggestion for the guidance of the teacher, and should help him to focus the details of his term's work." We are told that it should also prove useful to the head teacher in maintaining a continuity in his curriculum, even if handicapped by frequent changes of teachers. We cannot say that we are hopeful on this score. The value of the chart lies rather in guiding those who are conducting the education of pupils at home or at such schools as are free from all external expert control. Naturally the chart is open to all the criticism that inevitably follows any attempt at the classification of the elements of the curriculum. For example, many people will resent the separation of geometry from mathematics. Some will point out omissions, others will complain of excess of material. The drafter has

college men—for college women we dare not speak—will probably insist upon keeping an open mind, instead of accepting the conclusion that “the college ‘smoker’ is particularly out of harmony with the best ideals of that for which a college should stand.”

As a counterpoise to this attempt to limit the freedom of the male social unit may be placed the general trend of American opinion in favour of the increased liberty of the feminine unit. This is well illustrated in an interesting account of a *questionnaire* contributed to the December number of the *Pedagogical Seminary*, under the title of “The Effects of Social Restrictions on the American Girl.” The point of departure is marked by the sentence, “It is a matter of awe and wonderment to one who becomes conscious of how little we are ourselves, and how much we are what society has made us, to reflect that the hopes and fears of young lives flow in such deep-worn channels of standards, codes, and tastes, shaped without reference to the personal happiness of the individual.” As to the result of the investigation, it is more interesting than useful. We are, indeed, at the stage at which the important thing is the collection of material, and this pioneer work the *Seminary* is doing in a very industrious way. The old-fashioned reader is appalled at the masses of figures into which the facts of human nature are welded in these pages. The self-satisfied person should get a friendly warning not to dip into the *Seminary*. Somehow its contents have a way of making the reader less confident that he knows all there is to be known about education.

There appears to be some dissatisfaction with the oral examination that forms a test of a candidate's fitness to receive the degree of Doctor of Philosophy in American Universities. Miss Martha Hale Shackford, in the *Educational Review* (New York), resents it as a nerve-racking and humiliating experience for the candidate, and suggests that the only reason for its retention is perhaps “a last desperate endeavour to impress the candidate with the spectacle of academic authority.” To us there does not seem to be an excess of authority in a process that is known by the contemptuous name of “a quiz.” To the Eastern mind, however, it appears that there is something to be envied in the American relation between students and professors. A writer in the *Indian Educational Review* relieves his mind as follows:—“I am told that in America there is a University Day, when students, past and present, and all the professors, meet and mix together, with the distinctive flags of their respective Universities in their hands, and make a merry day. Some past students, even sixty years old, also attend, and take an active part in enjoying the day, and dance about! This is how a student is bound to his college, professors, and University.” We wonder.

## GENERAL NOTICES.

### RELIGION.

*A Spiritual Pilgrimage.* By R. J. Campbell. (7s. 6d. net. Williams & Norgate.)

When it was known that the Rev. R. J. Campbell had left the City Temple and was to receive Anglican Orders, wide interest was aroused. Not in any spirit of impertinent or vulgar curiosity, but from a desire to know something of the workings of the spiritual life of a remarkable man, both Free Churchmen and Anglicans looked for a statement. The book before us is an answer to the desire. In it Mr. Campbell traces his life and spiritual experiences.

*A Call to Baptismal Reform: A Bible and Prayer Book Study.* By “Archippus.” (3s. 6d. net. Allen & Unwin.)

Seventeen years ago Bishop Westcott thought that the next great Christian controversy would be about baptism. This remark stirred “Archippus” to write this book, in which he maintains that both sacraments should receive equal honour. It is published now, somewhat earlier than the author had intended, in view of the National Mission.

### EDUCATION.

*Studies in Education.* By M. W. Keatinge. (4s. 6d. net. Black.)

Readers of Keatinge's *Suggestion in Education* will welcome another volume from the same pen. In his preface the author modestly wonders why people read his books, but, as his publishers assure him that they do so, well, he offers another volume. And “people” are right: Mr. Keatinge is readable. This volume has evidently arisen out of lectures to students at Oxford. There is an impartial presenta-

tion of various and sometimes opposing views that stamps the University lecturer. At the same time, Mr. Keatinge has his opinions. Of these, perhaps, the one he advances most persistently and with the greatest persuasion is the need of aesthetic in education: the years of school provide the time for learning the arts of self-expression, which in later life will be enjoyed. Two important chapters deal with Education and Biology, giving the views of biologists and criticizing them with some acumen. Biologists tell schoolmasters that they cannot make a silk purse out of a sow's ear; but schoolmasters know that they can help to give the guinea-stamp that makes the formless gold of value.

### GREEK.

*Deigma: A First Greek Book.* By C. Flamstead Walters and R. S. Conway, with the co-operation of Constance I. Daniel. (3s. 6d. Murray.)

For many years there has been a very definite lack of a Greek book for beginners, which should carry out the more modern views of teaching classics. This book is assured of an immediate success, so soon as it becomes known. Generally, the lines followed are those of the authors' *Limen*. In detail there must be a distinction, because Greek is usually begun later than Latin. *Deigma* is specially drawn up for the boys and girls in municipal, county, or other schools where the study of Greek is begun at the age of fifteen or later. Accidence and syntax are taken together, point by point, each illustrated by a Greek passage and followed by exercises. The Greek passages are specially adapted as an introduction to Greek literature. The third of the fellowship of authors has been and is teaching Greek at school, and this ensures that the book is as suitable for school use as for University students. After two years' work in this book (a marvellous production for 3s. 6d.) the pupil is ready to tackle tragedy and history.

*The Rhesus of Euripides.* Edited, with Introduction and Notes, by W. H. Porter. (Cambridge University Press.)

The text is based on Prof. Gilbert Murray's edition, and the commentary follows those of Paley and Vater. Prof. G. Norwood writes an appendix on a disputed passage. The introduction deals fully with the vexed question of authorship. The non-critical may feel that, if Prof. Murray is content to include the play in his edition as the work of Euripides, it will, at any rate, be worth reading. The notes are full and scholarly.

### ENGLISH.

“The New Hudson Shakespeare.” Revised and edited by E. C. Black.—*Coriolanus, King John, Richard III, Romeo and Juliet.* (1s. 6d. per vol. Ginn.)

These are pleasant volumes to look at, to hold, or read. Critical research has continued its investigations since the first appearance of Dr. Hudson's edition, and consequently a new edition under skilled editorship was called for. The editing is scholarly, but the scholarship does not obtrude and spoil the reader's enjoyment of the play. The notes are given at the bottom of the page.

*Romola.* By George Eliot. Introduction and Notes by C. B. Wheeler. (2s. 6d. net. Milford.)

This is one of the volumes of annotated English classics that Mr. Wheeler has edited and is uniform in appearance with the others. The type is fairly clear, and perhaps the paper is not too thin; but to get 600 pages of text besides introduction and notes into a handy half-crown volume requires economy somewhere. The introduction is helpful and many of the notes are necessary for the modern reader, especially when he or she is young.

“Standard English Classics.”—(1) Goldsmith's *Deserted Village, The Traveller, and Gray's Elegy in a Country Churchyard.* Edited, with Introduction and Notes, by Louise Pound. (2) Coleridge: *The Rime of the Ancient Mariner, Christabel, and Kubla Khan.* Edited, with Introduction and Notes, by Lincoln R. Gibbs. (1s. each volume. Ginn.)

Tidy little volumes: type and paper good; all needed information to ensure understanding is given.

*Style and Composition: the Principles of Criticism in Literature.* By Prof. Hastings Crossley. (1s. National Home-Reading Union Pamphlets.)

A pamphlet that will well repay reading in these days, when the spread of the mechanical art of reading, together with the cheapness of production, have flooded the country with printed matter and confused the idea of what Literature is.

### HISTORY.

*Handbook of the History and Development of Philosophy.* By the Rev. J. O. Bevan. (5s. net. Chapman & Hall.)

Mr. Bevan begins his book with a list, in chronological order, of writers on philosophic subjects. This is followed by a section containing brief notices of prominent men associated with philosophic thought: these are arranged in alphabetical order, and are mainly biographical. The third section contains an alphabetical list of the various philosophical systems with a concise definition of each. These

three compilations are very useful for reference and will interest the general reader who is not well versed in philosophical writings; but of course the latter part of the volume, in which the author himself deals with the subject, is the most important. Mr. Bevan thinks rightly that after the war many subjects will call for philosophical discussion, and he offers himself as a guide to philosophic systems.

*Denmark and Sweden, with Iceland and Finland.* By Jon Stefansson. Preface by Viscount Bryce. (5s. net. Fisher Unwin.)

Denmark, Iceland, Sweden, and Finland are dealt with in different sections of the book, but a synchronistic table of events unites their histories. Lord Bryce writes a preface by way of introducing to English people Mr. Stefansson, who is an Icelander. The book is well printed and contains many interesting illustrations. The chapter on Iceland is especially full.

*Medieval and Modern Times.* An Introduction to the History of Western Europe from the Disolution of the Roman Empire to the Opening of the Great War of 1914. By James Harvey Robinson. (6s. 6d. net. Ginn.)

This is a revised issue of the author's "Introduction to the History of Western Europe," which appeared fourteen years ago. Some chapters have been reduced in order to give space for a fuller treatment of modern times. The book is designed for elder students at school or for University use. A special feature is the large number of maps, portraits, and illustrative plates.

*Ancient Times.* A History of the Early World. An Introduction to the Study of Ancient History and the Career of Early Man. By James Henry Breasted. (6s. 6d. net. Ginn.)

This volume is very attractive in appearance, and the illustrations, maps, and diagrams (some in colour) are admirably designed to help the understanding of the text of over 700 pages. Part I deals with the earliest Europeans of the Early Stone Age. Egypt and the Dwellers on the Nile, Babylonians, Assyrians, and Hebrews come in Part II. The Greeks, The Mediterranean World, and The Roman Empire complete the volume. The style is sufficiently simple for school use. It should prove a fascinating volume to lovers of history.

*The Manufacture of Historical Material.* An Elementary Study in the Sources of Story. By J. W. Jeudwine. (6s. net. Williams & Norgate.)

Mr. Jeudwine analyses early sources of our knowledge of History, showing how records have arisen from oral traditions and how they may be judged and their value estimated.

*The Days of Alkibiades.* By C. E. Robinson. With a Foreword by Prof. C. W. Oman. (5s. net. E. Arnold.)

The type, paper, illustrations, and appearance of this book render it an attractive volume. The sixteen plates, including such scenes as a Pyrrhic Dance and the Interior of a Greek House, are, as the author says, largely conjectural; but they are based on sound evidence and add greatly to the reader's enjoyment. The twenty-one chapters of which the book consists are sketches of life as the author deems it to have existed in the days of Alkibiades: a battle at sea, a funeral, a trial by jury, Olympia—these are a few of the subjects treated. And they are treated from the recent standpoint of writers who decline to admit that the history of Greece is dull: they make it live in their descriptions as they feel it to be alive in reality.

#### HUMANITARIANISM.

*The Flogging Craze.* A Statement of the Case against Corporal Punishment. By Henry S. Salt. Foreword by Sir George Greenwood. (2s. 6d. net. Allen & Unwin.)

Mr. Salt, as Honorary Secretary of the Humanitarian League, has carefully followed the controversies on the subject of flogging, and

writes with full knowledge. He traces the use of the lash historically, and discusses its effect, denying absolutely its value for moral reform or as a deterrent from wrongdoing.

#### FRENCH.

*Carte de Grammaire.* Arranged by L. E. Theedam. (6d. net. Mills & Boon.)

On a single sheet of paper which, when folded, could be carried in the pocket without destroying the shape of the coat, Miss Theedam has contrived to arrange all the essentials of French accentuation: plurals of nouns and adjectives, feminines of adjectives, pronouns of all sorts, four regular verbs in full, the two auxiliaries, and the necessary parts of the commoner irregular verbs are all set out in a clear and concise manner. One feels, however, that the paper would wear out before its contents were known, and one would prefer a cover and stitching.

#### GERMAN.

*A Scientific German Reader.* Edited, with Introduction, Notes, and Vocabulary, by Herbert Z. Kip. (5s. net. Milford.)

This is a volume in the Oxford German Series by American scholars, of which Dr. Julius Goebel is the general editor. The primary aim of a scientific reader is to introduce the student to, and prepare him to explore, scientific writings. Consequently we have extracts from recognized authorities on anthropology, astronomy, biology, botany, chemistry, geology, meteorology, and physics. These extracts, which cover 240 pages, are accompanied by the necessary explanatory illustrations; about 80 pages of notes and a vocabulary running to more than 100 pages, complete the volume. In his introduction the editor argues in favour of a reading book such as this in preference to imaginative works or *belles lettres* on the ground that scientific literature arouses a critical state of mind and requires constant reference to atlases, charts, and encyclopædias, which may lead to first-hand investigation.

#### MATHEMATICS.

*Dynamics.* Part I. By R. C. Fawdry. (Bell.)

The author aims at providing an elementary treatise suitable for the non-specialist in mathematics, and has issued this book as a companion volume to Part I of "Statics." The subjects treated are: Kinematics, Falling Bodies, Kinetics, Velocity.

*Warren's Table Book.* By the Rev. Isaac Warren. (3d. Simpkin, Marshall.)

This little book contains tables of the weights and measures used in the British Empire, with the metric system of weights and measures, and an account of the Calendar. Originally issued in 1889, a new edition has now been called for, and the author proposes to give half the net profits to assist wounded Irish soldiers.

*Longmans' Explicit Arithmetic for Girls.* Book VI. (Pupils' book, 5d.; Teachers' book, 1s.)

The pupils' book contains 72 pages of examples, of a commercial or domestic nature. The teachers' book gives in addition the answers, notes of typical lessons, and oral exercises.

*Lectures on Ten British Mathematicians of the Nineteenth Century.*

By Alexander Macfarlane. (5s. 6d. net. Chapman & Hall.)

The mathematicians are: George Peacock, Augustus de Morgan, Sir William R. Hamilton, George Boole, Arthur Cayley, W. K. Clifford, Henry J. S. Smith, J. J. Sylvester, T. P. Kirkman, Isaac Todhunter. There are portraits and an index. Dr. Macfarlane delivered these lectures at Lehigh University during the years 1901-1904, and they have now been published by his literary executors, who promise a further volume.

(Continued on page 24.)

## The Publishing House of FRANCIS HODGSON,

89 FARRINGTON STREET, LONDON, E.C.,

will be maintained and conducted under the same title and style as heretofore by the new Proprietor of the business, Mr. F. HUGH VALLANCEY, who was for several years Manager under the late Mr. FRANCIS HODGSON, and on Mr. Hodgson's death succeeded him as sole Proprietor.

As Publisher and Advertisement Contractor to *The Educational Times* and the other official publications of the College of Preceptors and other important Educational Bodies, Mr. Vallancey will hope to enjoy a continuance of the confidence and support of the educational public.

Please address all communications as heretofore:

**FRANCIS HODGSON, Publisher, 89 Farringdon Street, Ludgate Circus, London, E.C.**

Telephone: CITY 4871.

*American Journal of Mathematics.* Edited by Frank Morley. Volume XXXVIII, No. 4, October, 1916. (1 dol. 50 cents. Baltimore: Johns Hopkins Press.)

The contents include articles by Henry Taber, C. H. Sisam, W. D. Macmillan, Walter B. Ford, H. R. Kingston, and H. C. Gossard.

*Robert of Chester's Latin Translation of the Algebra of Al-Khwarizmi.* With Introduction, Critical Notes, and an English Version by Louis Charles Kaspinski. (2 dols. Macmillan.)

One of the Humanistic Series of the University of Michigan Studies. There are four plates showing pages of manuscripts in facsimile and twenty-five diagrams in the text.

### SCIENCE.

*Chemistry: Second Stage.* By F. P. Armitage, with the assistance of L. S. Dawe. With Diagrams. (2s. 6d. Longmans.)

This is a continuation of the author's "First Stage." The method advocated of dealing with demonstration, experiment, and note writing is detailed. A number of questions are added, and also a list of remedial measures for laboratory accidents.

*Practical Experiments in Heat and Light.* By W. St. B. Griffith and P. T. Petrie. (3s. 6d. net. Rivingtons.)

The aim of the authors has been to compile, from their laboratory notes, a series of experiments that can be done by boys between the ages of thirteen and twenty. It is designed for use in conjunction with a textbook or laboratory lectures. The two sections of the book are quite distinct.

### HYGIENE.

(1) *The Principles of Health Control.* By Francis M. Walters. (4s. 6d. Heath.) (2) *Crowley's Hygiene of School Life.* By C. W. Hutt. (3s. 6d. net. Methuen.)

These two volumes form part of a veritable stream of books connected with the hygiene of school life, which has reached us lately. Their issue is a sign that in future few British boys or girls will be left in puzzled ignorance of the structure and functions of their own bodies. Mr. Walters writes mainly with a view to corrective work, so that a knowledge of how to keep the body healthy may be acquired during school life. It is a book for teachers or for elder students: the illustrations are unusually good and clear, and there is a full index. Mr. Hutt has reissued Dr. Crowley's work written seven years ago. Short as the time has been, school hygiene has made great strides, and Dr. Hutt has brought Dr. Crowley's work up to the present date. It is addressed in the main to members of Local Education Authorities, and shows what medical inspection and medical care should aim at.

### BOTANY.

*Illustrations of the British Flora.* A Series of Wood-Engravings, with Dissections, drawn by W. H. Fitch, with additions by W. G. Smith. Fourth Revised Edition. (9s. Reeve.)

This edition is entirely new and contains some 300 pages of carefully drawn illustrations placed according to the "arrangement of natural orders" of Bentham's "Handbook," with the English names added, and an indication of the colour.

### TRADE.

*Eclipse or Empire.* By H. B. Gray and Samuel Turner. (2s. net. Nisbet.)

Dr. Gray writes to arouse the nation to a sense of the danger in which its commerce stands. The old supremacy has been lost: changes in method and in mental attitude are imperative. He writes with fiery emphasis. The facts and figures are taken from authoritative sources with the help of Mr. Turner and other contributors. The book is sure to arouse controversy, and contains a vast amount of detailed information about commerce which will certainly interest and probably surprise the non-expert reader.

### ASTROLOGY.

*A New Factor in Education: Astrology.* The Zodiac as the basis of Temperament. By Allan Leo. With Foreword by Beatrice de Normann. (6d. Office of "Modern Astrology.")

The first principle in modern methods of education is respect for the personality of the child. Each infant at its birth is united with the Zodiacal circle. By the aid of astrology the temperament of the child may be noted and thus the teacher is helped in the work of developing personality. This is the idea that is worked out in this pamphlet by Allan Leo.

### DREAMS.

*Dreams: What They are and What They Mean.* By J. W. Wickwar. (1s. net. L. Denny.)

In this little work the author seeks an answer to the question of the meaning of dreams. Men dream and have dreamed since the world began: the study of dreams is naturally forced upon us. Mr. Wickwar discusses their causes and meanings.

### KINDERGARTEN.

*Easy Games for the Times.* By Adèle Milligan Allmann. (1s. 6d. net. Boosey.)

The book comprises four finger plays, set to music; three nursery rhymes dramatized; four musical letter games, and three oral letter games; four free-movement and four recitation games, and two marches. The type is good and there are illustrations.

### MILITARY EDUCATION.

*Elements of Military Education.* By W. A. Brockington. (4s. 6d. net. Longmans.)

A book of nearly 400 pages, which can be carried in the pocket, with diagrams and plates. It contains all that is needed for Cadet Corps training.

### STORY BOOKS.

*The Water Babies.* By Charles Kingsley. (2s. Ginn.)

A pretty volume in clear type, with a number of quite attractive illustrations. The text is edited to the extent of cutting out the heavier passages that seemed to overweigh the story, and there are explanatory notes at the end.

*The Magic Kiss: A Picture Story - Book for Children.* Story by Christine Chaundler. Pictures by Florence Mary Anderson. (Cassell.)

A simple story in large type, with many coloured pictures and marginal sketches; it would greatly please a small child.

*The King of the Golden River; or, The Black Brothers.* A Legend of Stiria. By John Ruskin. Drawings by Hiram P. Barnes after the illustrations of Richard Doyle. (1s. Ginn.)

A new edition of Ruskin's charming fairy tale. The type is suitable for young readers. A preface relates the story of the origin of the book.

*The Three Pearls.* By the Hon. J. W. Fortescue. With illustrations by Alice B. Woodward. (6s. net. Macmillan.)

An amusing and well written story. As regards paper, print, and pictures, the book is quite good. The binding is an attractive plain cloth.

*The Life and Strange Surprising Adventures of Robinson Crusoe.* By Daniel Defoe. Edited, with introduction and notes, by W. P. Trench. (2s. 6d. Ginn.)

A very sensible edition, partly modernized, yet it retains the flavour of its century. Prof. Trench has made a thorough study of Defoe, and his present notes are based upon a larger edition, previously published.

*Frank Forrester: A Story of the Dardanelles.* By Herbert Strang. Illustrated by Cyrus Cuneo. (3s. 6d. net. Frowde.)

Mr. Strang retains his hold on boy-readers, and new books from him are eagerly read. Few subjects could be more attractive than the one he has here chosen—an adventure of which we know little in detail and are anxious to know more.

*Marvels of Scientific Invention.* By Thomas W. Corbin. With 32 Illustrations and Diagrams. (3s. 6d. Seeley.)

The book contains, in language that the ordinary non-technical reader can follow, an account of the invention of guns, torpedoes, mines, photography, and many other wonders. Mr. Corbin is an expert at this style of writing.

*Three Sailor Girls.* By E. E. Cowper. Illustrated in colour by N. Tenison. (3s. 6d. net. Frowde.)

A very spirited account of three girls, who obtain permission to go on a harmless coasting cruise. Then they have adventures. The story is well written.

*The Blue Book of the War.* Edited by Herbert Strang. (2s. 6d. net. Frowde.)

A collection of stories of the War, illustrated by maps and pictures. The stories are historical, and not fiction. Some of the titles are: Trench Warfare; The Action at Loos; The Kiel Canal; Bulgaria. They are written for young readers.

*The Cradle Ship.* By Edith Howes. Four Colour Plates by Florence M. Anderson. (3s. 6d. net. Cassell.)

A more charming and pleasantly written fairy story no children could desire; the binding, print, and paper are equally attractive. Mrs. Howes writes the story with the express purpose of answering the little ones' question: Where did baby come from? We have seen no book for young children that answers the question so well as this; and yet Mrs. Howes's art never fails her; there is no trace of didacticism.

*Chums.* Bound volume for 1916. Profusely illustrated. (7s. 6d. net. Cassell.)

Purchasers who like to get their money's worth cannot do better than buy this very large book of nearly a thousand pages, in which exciting stories, interesting articles on how to do or make things,

coloured plates, and line drawings abound. There is reading for many months.

*The Peek-a-Boos in War-Time.* Told by May Byron and illustrated by Chloë Preston. (2s. 6d. net. Frowde.)

A comic story in large type for little children, with humorous illustrations.

*Tales of the Great War.* By Henry Newbolt. Coloured plates and black and white illustrations by Norman Wilkinson and Christopher Clark. (6s. net. Longmans.)

No book that we have seen brings the reader nearer to his countrymen in the trenches and on the sea. By its simplicity and absence of rhetoric the narrative makes its appeal. For boys of fifteen years and upwards no book at the present moment could be more welcome.

"Little Stories of Great Lives" Series.—*The Story of Lord Kitchener.* By Arthur O. Cooke. (1s. net. Frowde.)

A pretty little volume, in good type and illustrated, giving an account of Lord Kitchener as a soldier in Egypt, Africa, India, and during the present War.

*The Tiny Folks' Annual.* Edited by Mrs. Herbert Strang. (2s. 6d. net. Frowde.)

Thick paper, very large type, with every page illustrated, containing a number of simple stories and verses suitable for little children in the nursery.

*Bo-Peep.* A Picture-book Annual for Little Folk. Many illustrations, over thirty in colour. (2s. 6d. net. Cassell.)

Humorous stories, simple informational articles, with pictures on almost every page, fill this attractive volume, which can be used well for reading aloud to children of from six to ten years of age.

*All About Inventions and Discoveries.* The Romance of Modern Scientific and Mechanical Achievements. By Frederick A. Talbot. (6s. Cassell.)

Mr. Talbot describes in simple and, as far as possible, non-technical language, the discovery and development of the telephone, wireless telegraphy, the steam turbine, and other inventions of modern science.

*Through the Enemy's Lines: a Story of Mesopotamia.* By Herbert Strang. Illustrated by H. E. Elcock. (2s. 6d. net. Frowde.)

Roger Burnet, summoned from his school in England, by a cablegram, just before the War, joins his father in Mesopotamia. Two years later Roger's adventures begin, and are told in Mr. Strang's thrilling style.

*Air Craft of To-day: a Popular Account of the Conquest of the Air.* By Charles C. Turner. Illustrated. (5s. net. Seeley.)

Lieutenant Turner was a student of aeronautics, and also a writer on the same subject before the War. Since the War he has found out by actual experience the value of this arm in fighting. He is therefore well able to meet the desire of younger readers (say from seventeen years upwards) for an account of the romance and the science of air-craft.

*The Old Man of the Mountain.* By Herbert Strang. Frontispiece by Cyrus Cuneo, and illustrations by René Bull. (3s. 6d. net. Frowde.)

Three young men engaged in tea-planting in Assam set off to shoot a man-eating tiger. Unexpectedly they find themselves involved in the most marvellous and dangerous adventures in unexplored parts of India. The story is really thrilling, and is told with skill.

*Burton of the Flying Corps.* By Herbert Strang. Illustrated by C. E. Brock. (3s. 6d. net. Frowde.)

There are numerous exciting illustrations to accompany Mr. Burton's adventures with his machine in France, Bulgaria, and Macedonia.

*Daring Deeds of Hunters and Trappers: True Stories of the Bravery and Resource of Hunters and Trappers in all parts of the World.* By Ernest Young. With coloured pictures. (3s. 6d. Seeley.)

A fresh volume in the Daring Deeds Series. The stories are all drawn from well authenticated books of travel.

*My Book of Beautiful Legends.* Retold by Christine Chaundler and Eric Wood. With 12 illustrations in colour by A. C. Michael. (6s. Cassell.)

The authors have collected well known legends from several countries—Pandora, St. George, The Man in the Moon, Narcissus, Ulysses, Arthur, and many others; the story of Deirdre is less commonly found in such collections. The book is handsome in binding, paper, and illustrations; the stories are pleasantly told.

*A Nursery Geography.* By George S. Dickson. Illustrated by George Morrow. (3s. 6d. net. Jack.)

A man with a magic carpet arrives in the schoolroom, and carries the children to Japan, China, Jamaica, Canada, and the Mediterranean. Later an aeroplane is used for the voyages of discovery. The pictures are good, and the descriptive letterpress entertaining.

## DIARIES AND YEARBOOKS.

*Brown's B.-P. Boy Scouts' Diary.* 1917. (6d. net.)

This admirable pocket-book, in its ninth year of publication, contains just the information that Scouts want. It is edited by J. Gibson, and published officially from the Scouts Headquarters. Consequently one may be sure that the information it contains is correct.

*Pitman's Shorthand and Typewriting Yearbook and Diary for 1917.* Edited by A. S. Andrews. (1s. net.)

A well bound book of about 300 pages, containing, in addition to the information usually given in a diary, special articles on all that concerns secretarial work.

*The Cambridge Pocket Diary, 1916-17.* (1s. net. Cambridge University Press.)

A neat and well bound waistcoat-pocket diary for the use of those connected with the University of Cambridge. The year covered is the academic year from October 1916 to May 1917, with added pages to December 1917. All University information and dates are given.

*Paton's List of Schools and Tutors.* Nineteenth Annual Edition, 1916-17. (2s.)

A book of a thousand pages, with illustrations on almost every page, is not, perhaps, overpriced at 2s. To any one interested in schools the volume is as fascinating as *Whitaker's Almanack*. But the special purport of the publication is to act as a guide to parents in search of a school, and the information given is so arranged that at once one can find the class of school and the locality one is seeking. A more useful publication could scarcely be imagined.

CONFERENCE OF EDUCATIONAL ASSOCIATIONS, 1917.—The report of the meetings of the Conference of Educational Associations is in the printer's hands, and it is hoped to publish it by the end of February. The report will contain the Master of Balliol's address and the papers that were read at the meetings—about thirty in all. Copies, if ordered before publication, will be 1s. 9d. post free; if ordered afterwards, 2s. Orders to be sent to the Secretary, 9 Brunswick Square, London, W.C.

# SANITAS

## DISINFECTANTS For SCHOOL USE.

A leaflet on School Disinfection will  
be sent post free on application to—

The "SANITAS" Co., Ltd.,  
Limehouse, London, E.

Disinfectant Manufacturers by  
Appointment to H.M. the King.

# THE COLLEGE OF PRECEPTORS CERTIFICATE AND LOWER FORMS EXAMINATIONS, CHRISTMAS, 1916.

## LIST OF SUCCESSFUL CANDIDATES AT THE HOME CENTRES.

The list of successful candidates at the Colonial Centres will be published in the May number of "The Educational Times."

### CERTIFICATE EXAMINATION.

[Throughout the following Lists, bracketing of names implies equality.]

The Prizes will be awarded as soon as the results of the Examination at the Colonial Centres are known. The awards will be communicated by post to the successful candidates, and a list of the awards will appear in the May number of "The Educational Times." The same number of "The Educational Times" will contain extracts from the Reports of the Examiners on the work in the several subjects of the Examination.

The following is a list of the Candidates at the home Centres who obtained the FIRST and SECOND PLACES in each Subject on SENIOR PAPERS. (Only those who obtained Distinction are included.)

<p style="text-align: center;"><i>Scripture History.</i></p> <p>1. Heslop, Miss Private tuition. C. M.</p> <p>2. Sutton, H. F. ## BOYS.

N.B.—The small italic letters denote Distinction in the following subjects respectively:—

<i>a.</i> = Arithmetic.	<i>do.</i> = Domestic Economy.	<i>gr.</i> = Greek.	<i>ma.</i> = Magnetism & Electricity.	<i>sc.</i> = Elementary Science.
<i>al.</i> = Algebra.	<i>du.</i> = Dutch.	<i>h.</i> = History.	<i>ms.</i> = Mensuration.	<i>sh.</i> = Shorthand.
<i>b.</i> = Botany.	<i>e.</i> = English.	<i>he.</i> = Hebrew.	<i>mu.</i> = Music.	<i>sp.</i> = Spanish.
<i>bk.</i> = Book-keeping.	<i>f.</i> = French.	<i>i.</i> = Irish.	<i>p.</i> = Political Economy.	<i>ta.</i> = Tamil.
<i>ch.</i> = Chemistry.	<i>g.</i> = Geography.	<i>l.</i> = Latin.	<i>ph.</i> = Physiology.	<i>t.</i> = Trigonometry.
<i>d.</i> = Drawing.	<i>ge.</i> = German.	<i>lt.</i> = Light and Heat.	<i>phys.</i> = Elementary Physics.	<i>v.</i> = Welsh.
	<i>gm.</i> = Geometry.	<i>m.</i> = Mechanics.	<i>s.</i> = Scripture.	

The signs \* and † prefixed to names in the Junior and Preliminary Lists denote that the Candidates were entered for the Senior and Junior Grades respectively.

In the addresses, Acad. = Academy, C. or Coll. = College, Coll.S. = Collegiate School, Comm. = Commercial, Conv. = Convent, Elem. = Elementary, End. = Endowed, Found. = Foundation, H. = House, Hr. = Higher, Inst. = Institute, Int. = International, Inter. = Intermediate, Poly. = Polytechnic, Prep. = Preparatory, P.-T. = Pupil-Teachers, S. = School, Sec. = Secondary, Tech. = Technical, Univ. = University.

# "IT IS CLEAR

**that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."**

*The Journal of Education*, June, 1916.

**This is the definition, by a competent judge, of what should constitute a  
USEFUL SCHOLASTIC AGENT.**

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient to claim clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them. At present our advertisements are appearing in nearly 400 papers in this country alone; and, outside of enemy countries, the War has made no difference in the circulation of our List of Schools.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness.

The following extracts are from recent acknowledgments:—

"You will remember advising me to send my daughter to ——— House School. I feel it would be ungrateful not to write and tell you how thankful I am I took your advice. She came home looking the picture of health, and she is as happy as the day is long."

(Dec. 29.)

"I am much obliged to your firm for assisting me to obtain these pupils, who seem all very nice boys."

(Oct. 11.)

"Thanks very much for sending me your 1916 List of Schools. My advertisement looks well, and has already brought me a pupil."

(Nov. 15.)

"I want to let you know that, after one term at ——— School, we are most satisfied with your choice of a school for our daughter, and desire to thank you very much for your advice in the matter. We do not think we could have selected a better place." (Jan. 22.)

"We have quite a contingent from that town (all through one girl whose parents read of the School in 'Paton's List')." (Oct. 29.)

"Relying solely upon your recommendation, I sent my boy last term to ——— School. I think it right to let you know that I am quite satisfied with the choice made." (Nov. 3.)

**If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.**

**J. & J. PATON, Educational Agents,**

**143 CANNON STREET, LONDON, E.C. Telephone: Central 5053.**

NORMAL  
CORRESPONDENCE COLLEGE.

THE MOST EFFICIENT AND MOST SUCCESSFUL CORRESPONDENCE COLLEGE.  
(FOUNDED 1889.)

**RECORD RESULTS.**

THE ONLY CLASS, COLLEGE, OR INSTITUTION

that has obtained FIRST, SECOND, and THIRD class HONOURS at the last THREE OXFORD and CAMBRIDGE LOCALS, and the HIGHEST DISTINCTIONS at the College of Preceptors Examinations is the NORMAL CORRESPONDENCE COLLEGE.

*Send for testimonials—names and addresses given.*

**HIGHER FROEBEL**

The highest percentage of Passes has been gained by the "Normal." Send for Free Guide of 72 pages.

**LLA.**

Not the highest number, but the highest percentage of Passes has been secured by the "Normal." Free Guide of 96 pages sent on application.

**OXFORD LOCAL LIST.**

A pupil of the "Normal" *Heads the List* and gains Five Distinctions. This pupil wins our £50 Prize and Gold Medal. Other pupils, as usual, gain Honours and Distinctions. Previous to this year pupils of the "Normal" have taken the *Second, Fifth, and Sixth* places in the Kingdom.

**CAMBRIDGE SENIOR LOCAL**

As usual, pupils of the "Normal" pass with First, Second, and Third Class Honours and Distinctions, and win Medals and Prizes.

**COLLEGE OF PRECEPTORS.**

The "Normal" is again the most successful at this Examination. As usual, Passes with Five and other Distinctions are gained by the "Normal."

**A.C.P. and L.C.P.**

Passes with Honours obtained. The College of Preceptors *First Prize*—the £10 prize for Education—has been won by a pupil of the "Normal."

**MATRICULATION.**

At each Matriculation examination pupils of the "Normal" are most successful. Many First Class and other Passes were obtained as usual at the last examination.

**CERTIFICATE.**

Most remarkable successes obtained again. The "Normal" has secured the highest percentage in the kingdom. "Normal" Money Prizes and Medals are won as usual.

**PRELIMINARY CERTIFICATE.**

THE ONLY CLASS that has passed pupils with Seven Distinctions at any examination is the "Normal." Pupils of the "Normal" have gained Seven Distinctions at both Preliminary Certificate and the College of Preceptors.

**FREE. THE NORMAL GUIDE.**

**In MURBY'S NEW SCRIPTURE MANUALS.**

Commended by all the Educational papers.

In preparation: SAMUEL II, by Dr. WADE and Rev. J. H. WADE.

THOMAS MURBY & CO., 6 Bouverie Street, London, E.C.4.

Whose 6d. Scripture Manuals have been well known for 50 years.

**CAREY'S "GRADUS AD PARNASSUM,"**

WITH THE ENGLISH MEANINGS.

Revised, Corrected, and Augmented by a Member of the University of Cambridge.

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, STATIONERS' HALL, LONDON.

**PRINTING FOR SCHOOLS**

GEORGE OVER

(Printer to Rugby School),

**THE RUGBY PRESS, RUGBY.**

Telegrams: "OVER, PRINTER, RUGBY."

Nat. Tel.: 126 Rugby.

**OUTLINE MAPS AND DRAWING COPIES.**

As Set at the College of Preceptors Examinations.

**OUTLINE MAPS.**

The World, British Isles, England & Wales, Scotland, Ireland.

Thames Basin, Mersey Basin, North Sea, Mediterranean, Europe.

Asia, Africa, N. America, S. America, Australia.

Price 1½d. per Map, post free; or 10d. per dozen. (alike or assorted).

**DRAWING COPIES** (Freehand). About 100 different subjects. Price 2½d. per copy, post free; or 1/9 per dozen, post free (alike or assorted). State whether Senior, Junior, Preliminary, or Lower required.

**CARPENTER'S DRAWING BOOKS.**

By GEORGE CARPENTER, late Drawing Master, Stationers' School. Pencilled Copies and Easy Examples, interleaved with Tissue Paper.

Curves. Outlines of Familiar Objects. Introduction to Perspective. Trees. The Human Figure. Ornament.

1/2 each Part, post free; or the Six Parts, post free, for 6/6

**FRANCIS HODGSON, 89 Farringdon Street, Ludgate Circus, E.C.4.**

**EDUCATIONAL AGENCY.**

(ESTABLISHED OVER 80 YEARS.)

Proprietors:—

Messrs. Griffiths, Powell & Smith.

Offices:—34 Bedford Street, Strand; and  
22 Henrietta St., Covent Garden, London, W.C.

Telegraphic Address:—

"Scholasque, Westrand, London."

Telephone:—7021 Gerrard.

**Scholastic.**

Head Masters and Principals of Public and Private Schools desirous of engaging qualified and well recommended English or Foreign Resident, Non-resident, or Visiting Assistant Masters, can have eligible Candidates introduced to them (free of charge) by stating their requirements to Messrs. GRIFFITHS, POWELL & SMITH.

A List of Vacancies will be forwarded on application to Graduates and other well qualified Assistant Masters seeking appointments for next term.

Schools Transferred and Valued. Partnerships arranged. No charge unless sale effected. List of Boys' and of Girls' Schools and School Partnerships for Sale, sent Gratis to intending Purchasers, TO WHOM NO COMMISSION IS CHARGED.

**Assistant Mistresses.**

Head Mistresses and Principals of Public and Private Schools requiring English or Foreign Assistant Mistresses can, on application to Messrs. GRIFFITHS, POWELL & SMITH, have suitable Candidates placed in immediate communication with them free of charge.

A List of Vacancies will be forwarded to English and Foreign Assistant Mistresses and other Teachers on application. Liberal Salaries.

**COVENTRY EDUCATION COMMITTEE.**

APPLICATIONS are invited for positions as Organizers of Physical Training in the Public Elementary Schools of the City.

Candidates must possess such training and experience as may be required by the Board of Education under Paragraph 15 of the Medical Grant Regulations. A sound knowledge of the Swedish system is necessary, and personal experience in teaching children of all ages is desirable.

Salary for men is at the rate of £150 per annum, and for women £110, rising to £130 per annum.

Form of application, which should be returned as soon as possible, may be obtained from the undersigned.

FREDK. HORNER, Secretary.

Education Offices, Coventry.  
1st March, 1917.

**ALBERDARE HALL, CARDIFF.**—RESIDENCE FOR WOMEN STUDENTS OF THE UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE.

Principal: Miss KATE HURLBATT, Somerville College, Oxford.

Fees £43. 10s., £38. 10s., and £34 per annum. College tuition fees £12 per annum. Scholarships of £25, awarded on the result of Entrance Scholarship Examination of University College, Cardiff, held annually in the Spring. For Post-graduate Scholarships of £50 for Secondary Training or Research work, or Medical work, awarded without examination, apply before June 1st. Students prepare for the B.A. and B.Sc. Degrees of the University of Wales. Departments for Elementary and Secondary Training, including Kindergarten Training, are attached to the College. Students with recognized academic qualifications can enter in October or January, for one year's Secondary Training Course. In the Medical School the Composition Fee varies from £20 to £28 for the first 3 years of medical study which can at present be taken at Cardiff. The Composition Fee for the Diploma in Public Health is £30. Apply to the PRINCIPAL.

**University Tutorial College.**

LONDON.

**LONDON MATRICULATION.**

SEPTEMBER, 1917.

A Morning Class for the September Examination is just commencing, and works continuously throughout the Summer, excepting the last two weeks of July.

Annually for the last twenty years about 100 Students of University Tutorial College have passed London Matriculation.

**ENTRANCE EXAMINATIONS.**

By a combination of Class Work and Private Tuition, Students are prepared for the Entrance Examinations held by the different Incorporated Societies as well as for Examinations admitting to Universities other than London.

**PRIVATE TUITION.**

Private tuition may be taken up at any time either during Term or in the ordinary School Vacations, in all subjects for London University and other Examinations, or for Independent Study. Fees: Eight hours, £2. 2s.; Twenty-one hours, £5. 6s.

Full particulars may be had from

THE PRINCIPAL,  
UNIVERSITY TUTORIAL COLLEGE,  
RED LION SQUARE, HOLBORN, W.C. 1.

Messrs.

**TRUMAN & KNIGHTLEY,**

LTD.

Educational Agents,

158 to 162 OXFORD STREET,  
LONDON, W. 1.

Directors:

S. A. TRUMAN,  
JAMES HEARD, B.A.  
(Trinity College, Cambridge).

Telegrams—"TUTORESS, OX, LONDON."  
Telephone—No. 1136 Museum.

*This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.*

**A.—EMPLOYMENT DEPARTMENT.**

**(i) ASSISTANT MASTERS & TUTORS.**

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

**(ii) ASSISTANT MISTRESSES.**

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

**(iii) LADY MATRONS AND HOUSE-KEEPERS.**

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

*No charge is made to Purchasers.*

*All communications and inquiries are treated in the strictest confidence.*

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

*Full particulars will be forwarded on application.*

The Educational Times.

Until further notice, "The Educational Times" will be issued four times a year: on the 1st of February, May, August, and November. The next issue will appear on August 1st.

Communications intended for the Editor should be addressed to Ulverscroft, High Wycombe.

THE BEGINNINGS OF A PROFESSION.

MORE than fifty years ago, in 1861 to be precise, the Council of the College of Preceptors felt the necessity for organization within the teaching profession, and urged before Parliament and elsewhere that teachers should be registered, just as medical practitioners are registered. For many years the College stood alone in voicing these claims, but by its insistence it gradually converted teachers to the need for professional registration. It is not without interest to note that the first Official List of Registered Teachers was compiled in the College buildings, though the need for more space has now taken the Registration Council to Bedford Square.

The Official List of Registered Teachers, or the Teachers Register, to give it the name by which it will be generally known, was published on February 21 of this year, and is based on an Order in Council issued in February 1912. The Register has taken five years of unceasing work on the part of the Registration Council. There were many difficulties of detail. In the first place the failure of the previous attempt at registration, with its Column B reserved exclusively for teachers in secondary schools, had tended to make people shy of a second application. Though the guineas previously paid were returned when asked for, teachers hesitated at first to run the risk of sharing in a second *fiasco*. Still greater difficulties were encountered in drawing up schemes for the enrolment of pri-

vate teachers and teachers of arts and crafts. By continuous and patient work on the part of the various Committees of the Registration Council, helped by the advice of experts in the different branches concerned, these difficulties have been surmounted. It was felt, and rightly felt, that a Register of Teachers should include all those who taught, assuming that they were properly qualified for their work. But tradition dies hard: and the tradition in the scholastic world is that a teacher is a man or woman who teaches the knowledge contained in printed books. The publication of this Register, in which the craftsman stands side by side with the University graduate, will do much to eradicate a tradition that has ceased to be useful.

There is nothing in the Register to indicate superiority or inferiority. It appears as a democratic document in which all, as far as the eye can see, are equal. Thus the Hon. and Rev. Canon Lyttelton, D.D., Head Master of Eton (as he was at the time when the Register was compiled) appears simply as "Lyttelton, Edward, Eton College, Windsor. 2062. May 1, 1914." No one could guess Miss Cleghorn's fame from the bald entry: "Cleghorn, Isabel. Heeley Bank Girls' School, Sheffield. 13. Jan. 1, 1914." This simplicity is captivating, and appears to have been rendered necessary by considerations of cost and convenience. In giving details, it is difficult to decide what to insert and what to exclude; and if everything were inserted the result would be a costly and bulky volume. But these considerations cannot have permanent weight. The present Register is by no means satisfying. It is welcome as a first proof of the possibility of an organized and registered profession of teaching. But we consult "Who's Who," "The Schoolmasters Yearbook," or "Debrett" in order to find out all about the name in which we are interested. We do not expect to be balked because one duke's blood is bluer than that of another duke, or because one graduate has taken a first class and another no class at all, or because one man's favourite game is polo and another marbles. We go to such books for information, and information we must have if the book is to serve its purpose. In future editions

of the Teachers Register we confidently expect to see all the information given that has been accepted by the Registration Council as worthy of being inscribed in its books. That is to say, each entry should give a record with dates of the teachers' education, experience, and qualifications. It should be possible for parents to consult the Register in order to be guided in the choice of a school.

The publication of the Register is a step forward, and a very important step. It marks a very definite stage in the history of the efforts of teachers to become a self-governing profession. The step won is likely to be retained. The foundations are firm. We can with some confidence anticipate continued progress. The issue of the list will encourage those who up to the present have held back. But it must be recognized that this list is only a beginning. It contains in all 17,628 names. There are not as many secondary teachers as were enrolled on the old Column B. For, although the list itself gives no evidence of status, we are informed in the preface that a rough analysis of the names gives about nine and a half thousand teachers in public elementary schools, nearly six thousand in secondary schools, and over two thousand specialist teachers. In Column B there were about eleven thousand teachers.

A step forward has been made. It is well to see the goal. In the words of the Registration Council, "the Register itself is but the beginning of a movement towards the promotion of self-government and self-organization such as will place the work of teaching on a truly professional basis."

## NOTES.

MR. FISHER'S speech introducing the Education Estimates delighted his friends and surprised those to whom he was previously unknown. He made an able presentation of the administrative facts as they exist to-day, and of the changes that he proposes to effect by administrative order. More than this, in the eyes of Parliamentarians, he held a large House attentive, interested, and even enthusiastic for two hours. When he sat down he was complimented by one speaker after another. Such a Parliamentary success goes far to justify the modern method of choosing a Minister because he is the best man for the post, in opposition to the former view of looking upon the post as a reward for party services. Without any emotional flights or striving after oratorical effects, Mr. Fisher held the House by the clearness of his explanations, the directness of his appeal, and his occasional humour. He had the House with him: we hope that he will have the country with him also; and that he is right in saying that a wave of real interest in education is arising throughout England.

THE definite proposals contained in Mr. Fisher's

*His Proposals.* speech do not greatly differ from those contained in the notes following, which were written before the speech was delivered. He will establish nursery schools, endeavour to discriminate between town and rural education in the elementary stage, see that every child stays at school till the age of fourteen, and introduce a new grant that will be fairer to the poorer districts and which will encourage the localities to pay better salaries. For he sees clearly that a very much larger supply of teachers—and able teachers—is necessary, and that to bring this about the conditions of service must be improved. He is not in favour of making the teacher a Civil Servant, because this would take from the interest of the Local Authorities. The idea of making secondary education free has been presented to him, but he sees sufficient reason to put this tempting scheme on one side. Continuation education up to the age of eighteen is, of course, foreshadowed, as is also a pension scheme for secondary teachers; but for these changes legislation is necessary. Additional estimates to the amount of nearly four millions were passed.

THE position of schoolmasters in reference to the demand of Mr. Neville Chamberlain for volunteers for National Service is by no means clear. At one time it was suggested that teaching should be recognized as a form of national service, and that schoolmasters should be content to remain in their places and not enrol under the national scheme. Then it was seen that to exempt one class of men from the obligation—a moral obligation only—might cause misunderstandings among other classes. So it is understood that teachers, along with judges, bricklayers, and members of Parliament, are asked to enrol, but that teachers will not be taken away from their schools without an opportunity for appeal. Each man must decide for himself what he considers to be his duty. Most men would prefer to enrol. But it is to be remembered that the schools must be carried on as long as possible. The vagueness of Mr. Neville Chamberlain's scheme is an objection to enrolment that causes a stumbling-block to many. The form once signed, the teacher is in the hands of a junior clerk who may know nothing of the circumstances. Whether he will be called upon to serve, or in what capacity, are matters to which no answer is attempted. If he decides that he can do work more useful to the country than he is doing at present, he had best go to a Labour Bureau and pick the job for which he feels himself to be suited.

THE position of women teachers in reference to the proposals of voluntary enrolment for National Service is quite clear. They are considered to be already performing work of national service of the most valuable kind. In this opinion Mr. Neville Chamberlain and Mrs. Tennant concur. The personal decision is often a hard one

to make. The interest, the glamour, the excitement of undertaking some fresh form of work which stands out in the public eye, or the desire for sacrifice, to give up familiar work for the unknown and possibly arduous task—these considerations may make many teachers hesitate as to their duty. There are no doubt exceptional cases, and, as was said in the preceding note in reference to men, each woman must judge for herself. After the provision of munitions and the necessary food and clothing, there can be little hesitation in feeling that the education of the children is the first duty of the nation. From some points of view it is a tame duty, and in these days of peril there is a natural craving to be doing some actual work that shall help directly to end the war. But, if the children are to suffer as little as possible, teachers must stick to their posts.

It is now becoming fairly clear what form the "reconstruction" of education is likely to take in the immediate future. **Reconstruction.** Legislation will provide compulsory full-time education in school for all children up to the age of at least fourteen years. This age may perhaps rise by successive stages up to sixteen years. From the ages of fourteen (or sixteen) to eighteen there will be compulsory part-time education during the day; and the hours of wage-earning during that period will be limited, so that children may be restrained from working long hours before and after their school lessons. There will be smaller classes, gradually working down to forty and thirty as the maximum. There will be a fuller provision of secondary schools, and the way to them from the elementary schools will be made broader. There will be provision for schools of a new type for very young children. In these changes the Board of Education will have to play a very arduous and important part. The Board will have to do three things:—(1) wring the additional money from a reluctant Treasury and from (sometimes) reluctant localities; (2) attract into the teaching profession the additional men and women required; (3) reconcile parents to the loss of their children's wages.

These changes are likely to be carried out so soon as teachers can be found; but there are other and wider changes in view. **Other Changes.** In some way or other social differentiation in schools will be gradually eliminated. All schools must become so good that exclusive parents need no longer hesitate to send their children to a given school lest they meet with "common" children. All schools must gradually take their place in the national system. This implies that all schools will be under inspection and control. The inspection that is to come will be very different from the existing inspection of the Board of Education, which is on a purely commercial basis and merely certifies to Parliament, the paymaster, that the goods have been delivered according to invoice be-

fore the money has been handed over. The control will extend to Universities: though this control, if we read aright the signs of the times, will leave Universities (and schools as well) freer than they are at present to carry out their real work of education. It is probable, too, that before long education will be free in all its stages, the entire cost being borne by the State. These are, indeed, important changes, and call for organization; but, taught by experience, we shall succeed in establishing an organization without crushing out the life of the institutions organized.

In all these changes, immediate and in the future, the Board of Education will play a **Inspiration.** controlling part. The primary function of the Board is administration.

But, in carrying out the wide scheme of reconstruction indicated, something more than administration is needed. The nation needs a leader to arouse, inspire, and guide. Judging from Mr. Fisher's public utterances, he is likely to prove himself this leader. In England we shall not have, nor does the state of the country require, a revolution such as has recently taken place in Russia, and such as we hope for in Prussia; but one result of the War in this country will undoubtedly be that we shall move a stage further towards pure democracy (in feeling, not necessarily in form of government); sound education will no longer be the preserve of those children whose parents can afford to pay for it. The country is in ferment with regard to education: many advisers and many plans appear; but among them certain indications are taking definite shape. The Workers' Educational Association have crystallized many longings. Mr. Fisher will know how to read the signs, and to steer between conflicting parties. If he reads aright and speaks with confident voice, the nation will follow, trusting in its leader.

THE National Union of Teachers have issued an important statement of their views as to the educational provisions that should be brought into existence at the close of the War. We have space here to indicate the main proposals only; the whole document deserves careful study, as showing the lines of progress laid down by the largest organized group of teachers in the country. Education is viewed as a national obligation, and should therefore be free in all its stages. Compulsory education should extend from the age of five to the age of eighteen, attendance being full-time up to the age of fourteen, and part-time later; but the hours for labour and school attendance shall not exceed forty-eight a week. No certificated teacher should be responsible for more than forty children. Girls shall be trained for the duties of home-life. The need of proper physical education, of hygienic buildings, suitable playgrounds, necessary meals, are fully recognized in a series of resolutions. In order to secure

a supply of qualified teachers, it is recommended that there be great improvement in regard to salaries, pensions, and the general conditions of teachers' service. Under the heading of training, it is urged that every candidate should have an opportunity of obtaining a University degree at the close of the training-college course.

**THE** College of Preceptors have accepted an invitation to send representatives to an important conference organized by the Workers' Educational Association for May 3. The resolutions to be submitted to the Conference demand the establishment of nursery schools for children from the ages of two to six; the abolition of all forms of exemption under the age of fourteen; the raising of the leaving age to fifteen within five years; the immediate reduction of all classes to forty, with a view to a further reduction to thirty; the establishment of a school medical and dental service, to ensure proper treatment for all scholars; and greater facilities for games, swimming, bathing, and open-air teaching. The necessity of establishing a broad highway to the University is urged in another resolution. With regard to part-time education, after the age of fourteen (or fifteen or sixteen), it will be proposed that the hours of labour for young persons under the age of eighteen be limited to twenty-five per week. Free full-time secondary schools are to be provided for all children who are desirous of entering, and an adequate number of scholarships to the Universities are to be granted. The conditions of the teaching profession are to be such as will induce the best men and women to enter and remain in the schools. Finally, as regards finance, the Board of Education should bear 75 per cent. of the cost.

**THE** usual annual service in St. Paul's Cathedral, arranged by a committee representing most associations of teachers, both elementary and secondary, will be held on the evening of Ascension Day, Thursday, May 17, at 6 o'clock. We note the date precisely, because last year there was some confusion between the Eve and the Evening. There are no tickets and no reserved seats. The preacher is the Rev. Canon Newbolt, and the service will take the form of a Service of Intercession in connexion with the War. It is hoped that the whole congregation will take part in the simple music; but it is also proposed to have a special choir, and those who are willing are invited to send their names to Mr. Alan May, 31 Bonham Road, Brixton Hill, S.W.2. The anthem, "Justorum Animae," can be bought from Novello for 3d.

**THE** Board of Education have now issued their Regulations for the payment of grants to Play Centres. For some years these centres have been organized and managed by voluntary workers. They have been a great

boon to the children. The time has come when it is due that official recognition should be granted and financial help given. Especially at the present moment it is needful to continue and multiply these centres. It is common knowledge that the children who have no playing ground except the public street are getting out of hand, possibly, as has been suggested, owing to the absence of so many fathers at the War. The hooliganism is, of course, merely the result of vitality wrongly directed or unhealthily repressed. These play centres, if they can be established in connexion with all the schools, will afford opportunity for interesting games and occupations for children who have nothing to do after school hours except to play in the streets. It is to be hoped that the smaller localities, where the need is just as great, will follow the example of the larger towns.

**THE** permission given by the Board of Education to Clerks in Holy Orders or Regular Ministers of Congregations to offer their services as teachers in public elementary schools has not been warmly welcomed. This is inevitable. The memory of the Vicar's control is too recent. But the proposal is, under the circumstances, quite reasonable. We hope many of the clergy will take advantage of it and that they will meet a friendly spirit in the schools. They will be temporary teachers only, and will have no recognized status under the Code. Some of them will certainly show sufficient knowledge of boy nature and sufficient sympathy with original sin to make fairly effective teachers for a short period. A further provision makes it possible to employ a clergyman or minister only when no qualified teacher can be obtained. Not only, nor especially, in the interest of the school do we welcome this decision of the Board, but more especially in the interest of the clergy who, for the most part, have few opportunities at the present time of sharing in any special emergency work resulting from the War.

**THE** arrangements for the new Commercial Examination of the College of Preceptors are now complete, and specimen papers are ready for distribution. These papers have been very carefully prepared and subjected to expert criticism. It is confidently expected that they will be found to be on the right lines from two points of view: that the schoolmaster will find that they indicate the proper lines of preparation for commercial life, and that the employer will recognize that the subjects thus taught and tested are the right ones to produce the qualities he desires. There is to be one examination, at about the existing Senior standard. Boys and girls who have won the Certificate should be greatly helped in finding suitable posts. The College has done a useful piece of work in establishing this examination.

## EDUCATION IN JAPAN.

By H. B. WATSON.

## I.

A FEW years ago, during a pleasure trip to Japan, I was enabled, by the good offices of friends at the British Embassy and by the kind courtesy of Mr. Nobuaki, then the Minister of Education, to visit some ten or a dozen typical schools of Tokyo and Kyoto, the modern and ancient capitals of the country. It may seem a far cry from England to Japan, but the movements—educational or otherwise—of an ally that has done great service in this deadly war ought to be a concern to us, and I have thought that a few notes, made mostly at first hand, would not be uninteresting.

I am indebted to my friend, the late Lieut.-Colonel E. F. Calthrop, R.F.A., to the writers of several pamphlets and blue books, or books of varying hue, and to the author of "Murray's Guide to Japan," Prof. B. H. Chamberlain, who could make even a time-table interesting; but chiefly to those many courteous Japanese teachers whom it was a privilege to meet and without whose kind assistance this article could never have been written.

## II.

It is hardly fifty years since Japan was in the dark ages of feudalism; in September 1864 a few American warships "cannonaded their way" into the Straits of Shimonoseki, the entrance to the picturesque Inland Sea, and forced the East to open her gates to the West. In May 1904 Admiral Togo inflicted a crushing defeat on one of the proudest of European nations, not far from these same straits. The self-confident efficiency that produced this remarkable change in the destiny of Japan was largely the result of education in which England, France, America, and Germany can claim a share. I do not intend to surmise to what heights Japan may rise in the scale of first-class nations; when the oldest European inhabitants in Japan are bewildered by the rapid advances she has made, it would be foolish for a casual observer like myself to hazard an opinion. I shall content myself with merely giving a plain, uncritical—and, I hope, fairly accurate—account of what I saw of the system that is producing these results.

To England, Japan owes her naval efficiency; to France, she owes greatly in medicine; to Germany, something in medicine and much in military organization; to America, however, is almost entirely due, for better or worse, the establishment of a system of education.

## III.

The warrior-nobles of Satsuma and Chu-shu who, in 1869, had been largely responsible for the overthrow of the Shogunate, or military despotism of Japan, and for the restoration of the power of the Mikado, were clever enough to see\* that no eastern country that "retains exclusively Oriental institutions could hope to keep its country free from Western aggression." These Samurai, or nobles, once recognizing this, threw themselves heart and soul into the task of Europeanizing their country. The Marquis Ito, perhaps the most important statesman of modern Japan, ran away in a French ship to Europe in order to imbibe at first hand the new learning. It must not be thought that here was a race, such as the Maori or the Fijian, forced by circumstances to take on the civilization of its conquerors; "rather was it the case of a people, civilized, but different from ourselves, acknowledging that they had found a more excellent way, deliberately cutting adrift, whether for good or for ill, from the ties of the past, and attaching themselves to the new ways of the hitherto hated barbarian." Never has history seen such a change of front! The chief practical points to note are the disestablishment of the State religion, Buddhism, the consequent crumbling away of the old priestly education, and the substitution in essentials of a system similar to that of the leading countries of the world. Even before the overthrow of the Shogunate, leading nobles had established schools under foreign advisers; but it was not until 1871 that a department of education was set up; the next year saw the promulgation of the code that is to-day in vogue. It will thus be seen that the establishment of systematic education was almost synchronous in Japan and England.

\* Prof. B. H. Chamberlain's "Things Japanese," from which I have borrowed freely.

"It is designed," runs their Code, "that henceforth education shall not be confined to the few, but shall be so diffused that there shall not be a village with an ignorant family, nor a family with an ignorant member." When the Mikado became Emperor *de facto*, many of the knightly families, the Samurai, were deprived of their livelihood, and exchanged the soldier's sword for the scholar's book. In this way education had the advantage, in its earliest teachers, of men who were inspired with those ideas of

"Truth and honour, freedom and courtesy,"

that in Japan are sometimes known under the name of Bushido.

## IV.

The chief schools of Japan fall under five heads: (1) Primary schools; (2) higher primary schools; (3) secondary or high schools, called in Japan middle schools; (4) higher colleges or schools for advanced students; (5) Imperial Universities. Besides these, there are normal schools for the training of teachers, agricultural, technical, commercial, military and nautical schools, not to mention the many missionary institutions supported by the forty-five Christian sects established in Japan, one of which—the Doshisha Congregational school—I visited. The work done here under American instructors was about equal to that of one of our good secondary schools; its aim, as is that of Count Okuma's private foundation at Waseda, is to grow to the importance of University teaching.

With regard to agricultural schools, it may be remarked that, probably owing to the close settlement of the soil, Japan established scientific instruction long before England had anything of the sort. Primary education is practically free. In the rare cases where a charge is made, the fee is rather under 2d. a month; in the higher primary schools it is as high as 2d., the middle schools leap to 4s., while the colleges exact a lump sum of about £2. 10s. for the whole year. Fees then can only very partially defray the cost of education—the bulk of it is defrayed by local taxation.

The majority of school buildings in Japan are unsightly structures, as a rule mere huge packing cases. Built of wood and unpainted, they are clear evidence of the poverty of the country. In most cases no provision is made for the warming of rooms, and this in a land far colder in winter than our own country. The populace generally seemed to me to suffer from cold, and though the poorer people do have *hibachi* or charcoal braziers, round which they miserably crouch, how the poor school children, nearly always thinly clad, manage to endure the winter is puzzling, unless the ten-minute spell between each lesson enables them to get up some animal heat by rushing about. Most of them, however, take their pleasures so sadly that it is doubtful whether they can be anything but wretchedly cold throughout the winter months. Some of the higher schools are better served, and the pupils better clad; both the Tokyo and Kyoto Universities are fine brick piles, modern in design, and well equipped in every way. Everywhere the apparatus seemed adequate; the imitative Japanese produce all their maps, charts, and scientific requisites in the country. I should imagine the equipment of the Tokyo University and of the Higher Technological College in the same city to be equal to that of similar institutions anywhere, except perhaps some few wealthy and well endowed ones I can think of in America and the old world.

In this Technological College every kind of industrial training is given with a view to fitting the young mechanic for the stress of modern competition. Good as the work was, it was somewhat lamentable to notice a complete jettisoning of all those ancient practices that hitherto have made genuine Japanese ware of national inspiration such delights to behold and such treasures to possess. In the designing rooms, where there happened to be a sort of exhibition of students' work, the chief prizes fell to those productions that in my eyes most nearly approximated to the most tawdry European models—the bold impressionist imaginative style of this naturally artistic and æsthetic people found no favour with the judges, who were no doubt educational reformers and keen business men. With obvious pride some student had shown some hideous coloured post cards, without character, drawing, or any artistic merit. As similar work filled shop windows, and evidently commanded a large sale, it is not surprising that he secured a first prize. The pottery rooms contained for exhibition fine collections of Sèvres and other well known makes. Such work is, of course,

above imitation, and, if it were not, there would be little demand for it in Japan; but it was distressing to see that all the work turned out was poor in design and quality. The reason is obvious. There is a demand for this poor quality stuff among the millions of workers between Peking and Singapore, and Japan is as alive to her material and commercial interests as are the countries of the older world to the importance of capturing these lucrative markets.

Is this but a passing phase, or has the production of delicate *cloisonné*, shapely metal work, and artistic china become an entirely lost art in this race for commercial supremacy? Returning for a moment to school equipment, there is in Tokyo a large educational museum where may be seen an exhibition of the apparatus used, and specimens of the work done, in all the elementary schools of the world. It was not inspiring to find that, especially in writing, drawing, and sewing, the work shown from English schools was noticeably inferior. Such work could hardly be typical, but the critical and rather head-inflated Japanese—and they thronged this museum—were not impressed by it. Have we a similar exhibition? Such an establishment might be of good value if nothing but the best were exhibited.

With regard to salaries, these at first sight will seem ridiculously inadequate, but it must be remembered that the cost of living, though, as in all progressive countries, constantly rising, is still extremely low. An ordinary Japanese can live well on 20 sen, or twopence a day! Hence the average salaries of £21 and £48 per annum in primary and middle schools are, if not princely, not particularly small. The colleges and Universities rarely pay a salary of over £250 a year; the average of the Tokyo professors is less than £200; the President, who controls the destinies of more than 3,500 students, receives but £400 per annum! The social status, however, even of the lowest teacher is high; his position is reasonably secure; he has a pension to look forward to, and a definite rank in this country of social distinctions. For instance, the primary teacher, by virtue of his office, is a *Hannin*, and to belong to this lowest of four official grades is considered a high honour. Professors and the Principals of Departments in the secondary schools are in the second grade of *Chokunin*, to which Cabinet Ministers belong. With us eminent scientists are reluctantly honoured by the State; clerical head masters are occasionally elevated to the *Episcopate*; one public-school master has been knighted, and I believe the head of a colonial school was once accorded the dignity of *C.M.G.*

To continue. If primary education is practically free, it is also practically compulsory. There are no truant inspectors or prosecutions of parents for not sending their children to school, but public opinion, working in conjunction with the school authorities, secures that 95 per cent. of the children of Japan are enrolled on the school lists, and that, of these, 90 per cent. is the average attendance. If these figures are correct (and they are taken from official reports), they show very effective organization. The numbers in classes, the subjects taught, and the length of the school day, call for no special mention; school begins early in the morning, and is generally over by two o'clock in the afternoon, ostensibly to leave time for recreation and amusement, but too often for the young people to be employed in some way that will add a few sen to the family purse; drill and physical exercises occupy more than four hours a week in school hours; the syllabus is simple and sensible, confined to the three R's and to sewing and elementary manual work.

There is an organized system of medical inspection of all schools. One noteworthy feature of elementary education is the retention of the abacus, or counting board. The merchant or the banker, however Europeanized, will produce his counting board—framed, of course, to suit the decimal system—and, even if capable of computing by Western methods, prefers to keep to his old way, as quicker and more accurate. The difficulties of mastering the abacus, and of learning to read and write Japanese, account for the smaller number of subjects on the syllabus, which would look unimposing if put alongside our more pretentious array of subjects.

In all schools definite instruction is given in morals, so that the system cannot be considered entirely secular. The basis of instruction is an Imperial Edict of 1890, with which many may be familiar, but which is sufficiently striking to repro-

duce. Textbooks based on it are used throughout schools of all grades, and it is formally read with almost religious ceremony on anniversaries and other important occasions.

The following translation, issued by the Japanese Board of Education, is claimed to be an improvement on all previous versions, but no doubt it suffers from the defects of all translations:—

Know ye, Our subjects:

Our Imperial Ancestors have founded Our Empire on a basis broad and everlasting, and have deeply and firmly implanted virtue; Our subjects, ever united in loyalty and filial piety, have from generation to generation illustrated the beauty thereof. This is the glory of the fundamental character of Our Empire, and herein also lies the source of Our education. Ye, Our subjects, be filial to your parents, affectionate to your brothers and sisters; as husbands and wives be harmonious, as friends true; bear yourselves in modesty and moderation; extend your benevolence to all; pursue learning and cultivate arts, and thereby develop intellectual faculties and perfect moral powers; furthermore, advance public good and promote common interests; always respect the constitution and observe the laws; should emergency arise, offer yourselves courageously to the State, and thus guard and maintain the prosperity of Our Imperial Throne coeval with heaven and earth. So shall ye be not only Our good and faithful subjects, but render illustrious the best traditions of your forefathers.

The way here set forth is indeed the teaching bequeathed by Our Imperial Ancestors, to be observed alike by Their Descendants and the subjects, infallible for all ages and true in all places. It is Our wish to lay it to heart in all reverence in common with you, Our subjects, that we may all thus attain to the same virtue.\*

This is a veritable counsel of perfection; but, except in Yokohama and other treaty ports, where the people have been not a little demoralized by contact with not too scrupulous traders and with the scum of all nations, the honesty, kindness, and politeness of the Japanese were conspicuous.

## V.

Coming more particularly to what we should call secondary education—that of the middle and higher schools—it is regrettable to find that about 40 per cent. of those qualified and anxious to go on to more advanced work are debarred by lack of accommodation. As things are, about one in every 300 of the population passes through these higher schools. In all schools of this stamp the study of English is compulsory, and as much time (six hours a week) is devoted to it as to Chinese and Japanese combined. In the still higher schools, either French or German is also learnt. Reckoning Chinese as equivalent to Latin or Greek, the subjects otherwise are precisely the same as with us, mathematics being taught in the usual branches.

The teaching of morals is still persevered with, though apparently definite instruction is omitted in the girls' schools. A prized privilege of boys passing prescribed examinations from the secondary schools is that only one year of military service is further required, and such boys are regarded, not as conscripts, but as volunteers. This exemption is reasonable, for right through his school career a boy is a member of a cadet corps; on inquiry, however, I was surprised to learn that shooting was practised only once a year, and then more as a holiday recreation than as a serious business; my information here was probably incorrect.

In all schools above the primary grade, the boys wear a neat uniform of dark blue, with heavy military overcoat, in which they delight to disport themselves even on the warmest days; in private life they doubtless quickly get into the more becoming and more comfortable kimono. At my interview with the Minister of Education—who, by the way, spoke perfect English—I found him dressed in the ordinary grey or brown silk kimono of the Japanese gentleman; his carriage was waiting at the door, and on my departure he would have to don the top hat and frock coat that is obligatory on all the higher officials.

A word or two with regard to physical training. Gymnastics are carefully taught, and in the first middle school in Tokyo, systematic breathing exercises are enforced at the beginning of every school day. Large numbers of the young Japanese, like the Germans, are shortsighted; this is partly

\* This from *School*, a now defunct magazine.

due to the intricacy of their ideographs, but I noticed that those who study German are much more often shortsighted than those who study French—no doubt owing to the strain of reading the German characters.

The Japanese are sensitive, too, on the subject of their small stature, and many schools are doing much to improve their national physique. The statistics furnished me by the head master of the admirable middle school mentioned above, show that, despite much curvature of the spine induced by squatting on the floor, and over *hibachi*, it may be that, by taking further thought, the Japanese may in time "add one cubit to his stature." Tennis and baseball are played everywhere, and *ju-jitsu* and the old-time fencing are favourite pastimes among the older boys. Adequate playgrounds, as unfortunately too often here, are almost non-existent. The endowed Peers' school, the Eton of Japan, and some of the military colleges, have good playing fields, but the scanty acres about the fine University buildings at Tokyo and Kyoto show that the undergraduate has little scope, even if he has the taste, for athletic pursuits. At one primary school I visited, the physical drill for girls consisted of a set of quadrilles, nicely danced in a concreted quadrangle, to the strains of a villainous American organ.

## VI.

One great obstacle in the path of the Japanese in their attempts to assimilate Western knowledge lies in the necessity of learning Chinese, as well as their own language. One must remember that they still use Chinese ideographs, or word-pictures, and have to learn by rote at least 4,000 arbitrary symbols. These symbols both a Chinaman and a Japanese can read, but each interprets them by different words, and neither understands a word of the other's language. Then, too, the grammar and style of conversational Japanese differ from that used in correspondence and in literature. There is an influential movement in the direction of Romanizing the writing of the language on phonetic principles that may prevail, but, though most of the teachers with whom I came in contact were in favour of the change, old prejudices die hard, and, owing to practical difficulties, a reform is probably as far distant with them as, with us, is the adoption of a decimal system of counting or a rational method of spelling.

It was particularly interesting to me to notice the teaching of English; the desire to know our language is pathetic; you will find shopkeepers and errand boys in odd moments, instead of snowballing one another, or passers-by, pulling out an English-Japanese dictionary from the sleeves of their kimonos, with a view to firing off a phrase at the next foreigner. In any good secondary school you will find English taught by the natural method, and it would have delighted the heart of any keen inspector of schools to hear the instruction of the lowest class of one school by a painstaking Japanese:—

"It ees a—a bird," said he, pointing to a picture of an ostrich. "Eet has wings; but eet cannot fly. Eet can run very fast. Is eet a fow-ell? No! Eet is an orstreecher!"

A higher class, evidently excellently taught by an American lady, was able to repeat with correctness and fair understanding a piece of repetition of the "Lochinvar" order. I was amused to meet this class afterwards cleaning their rifles, and ragging their old sergeant-major with all the cheerfulness of irresponsible boyhood. The master who was accompanying me explained to two boys that I had just come from Australia and New Zealand, when one of them instantly responded, with a grin, "Good day, kapai Nihon" (Japan very good). The "kapai," a common Maori word for "very good," must have been a reminiscence of a well taught geography lesson. In a higher school the standard of reading was equal to that of our University pass classes. One class was following with zeet a passage from Carlyle's "Heroes and Hero Worship." On my asking a few questions, though too shy to answer very correctly, the students showed that they understood what they were reading. Abstract and philosophical writing seems like mother's milk to the Oriental mind. While going through the chief training college for teachers, I came across two students in the library chuckling over the "Pickwick Papers." I could hardly believe that their knowledge of

English was sufficient for them to appreciate the vulgarisms of the immortal Sam Weller, and asked one of them the meaning of a phrase; this he gave quite correctly, and he was evidently prepared to reel me off a résumé of a lecture, lately delivered, I suppose, on Cockney English. Perhaps I was sent to exceptional schools, and perhaps I encountered exceptional students, but one could not fail to be struck with their intelligence and their industry. Spoken English was another pair of shoes, but certainly not worse than the attempts of most of us to express ourselves in French and German.

The ignorance or diffidence of the Japanese instructors in English is doubtless responsible for great weakness in wrestling with our spoken language. In these higher schools the ability to write English fluently and correctly was marked, but, despite six or eight years' study, the efforts at idiomatic speech were too often lamentable. In walking down one of the less important streets of Tokyo, I was surprised to find that nearly all the shops had a few words of English painted on their signboards. The idea of the Japanese shopkeeper may have been to try to impress his neighbour with his own superior education, but I must confess that much of the English was quite unintelligible to me. "Dealer in Pest Milk," "Extract of Fowl" (meaning "eggs") were two, while a barber described himself as a "head cutter." "Milliners and Ladies' Outfitters" are common. Prof. Chamberlain, who probably knows more of the Japanese language than the Japanese themselves, and who for many years was professor of Japanese literature in the Imperial Tokyo University, records a poetical effusion of one of his students who, having heard women described as the cement of society, apostrophized them as "Social glue"! In his "Things Japanese" to which I am indebted for my historical statements, he gives an extract from an essay on the character of an Englishman, that is quaintly expressed, and hits off shrewdly some of our supposed characteristics: "The England which is occupied of the largest and greatest dominion which rarely may be. The Englishman works with a very powerful hands, and the long legs, and even the eminent mind; his chin is so strong as decerved iron. He are not allowed it to escape, if he did seized something. Being spread, his dominion is dreadfully extensive, so that his countrymen boastfully say, 'the sun never sets on my dominion.' The testamony of England say that he that lost the common sense, he never any benefit, though he had gained the whole world. The Englishman always said, 'Give me your land, and I will give you my Testamony.' So it is not a robbed but an exchanged."

But this is hardly fair. Reflecting on my own feeble efforts to express myself in Japanese, I can only admire the determination of these clever people to acquire English. And many of them succeed; the best teachers and professors, educated as many of them have been in England and America, spoke and wrote admirable English. The principal of the first higher school, as he sat in cap and gown before a desk on which lay the latest scientific and philosophical works of England and Germany, was, for all his brown skin, a typical head master as we know him. In Japan, as in America, education is taken seriously; great zeal on the part of the teacher is rewarded by corresponding earnestness on the part of the scholars. There is perhaps an excess of earnestness. After a school or University examination it is no uncommon thing to hear of suicides, a favourite spot chosen being that romantic waterfall on the way to Chusenji, near the famous temples of Nikko.

Some may ask: "What does it matter to us here in England what the Japanese teach in their primary and secondary schools?" To this I can only reply that their system, even if less ambitious than our own, leads to efficiency in all directions, especially from the national point of view. Their patriotism is no mere lip service; to fit themselves to live for their country, and, if need be, to die for it, is with them a real passion. Can any one doubt this who has followed the record of their deeds in the Russo-Japanese War, or who has realized the intensity of performance revealed in such a book as "Human Bullets"? Nowadays the East is not so far sun-dered from the West as some imagine, and we can all afford a sympathetic thought to a valiant ally that not long ago threw in its lot with ourselves in the cause of civilization and in a struggle for ideals which we are now striving to maintain with the best blood of our race.

## THE COLLEGE OF PRECEPTORS

### PROFESSIONAL PRELIMINARY EXAMINATION.—MARCH, 1917.

## CLASS LISTS.

THE Professional Preliminary Examination was held on the 6th, 7th, and 8th of March in London, Birmingham, Blackburn, Bristol, Cardiff, Edinburgh, Glasgow, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, and Nottingham. The following candidates obtained Certificates:—

## SENIOR.

## Pass Division.

Dale, H. W. L. <i>l.</i>	Sykes, C. E.
Dodd, R. W. <i>ma.</i>	Turner, E. S.

## JUNIOR.

## Honours Division.

Allen, J. V. D. <i>l.</i>	Jenkins, T. L. <i>a.l.l.</i>	Smith, H. A. <i>e.</i>
Fripp, G. H. S. <i>a.a.l.l.</i>	Sage, H. W. <i>e.a.al.</i>	Wolfendale, R. E. <i>al.</i>

## Pass Division.

Annis, E. N. C.	Evans, A. E.	Houlton, J. V. <i>a.al.</i>	Richman, H.
Anthony, F. L.	Evans, G. I. <i>al.</i>	Howe, W. F. <i>a.l.l.</i>	Robertson, Mrs. M. C. <i>e.</i>
Bailey, W. E.	Evans, Miss M. <i>g.al.</i>	Hughes, T. W.	Satchwell, R. E.
Barlow, T. F. <i>l.</i>	Field, E. V.	Jeffers, Miss A.	Shaw, J. K.
Bechal, I.	Fletcher, C. <i>e.</i>	Lakin, H. H. <i>al.</i>	Snook, A. J. <i>a.</i>
Bishop, H. <i>a.al.</i>	Folwell, W. E.	Lambert, Miss M.	Strickland, J. N. <i>l.</i>
Blaik, W. M.	Fox, Miss B. M.	Lys, W. F.	Summers, R. D.
Brettell, H. MacD.	Frazer, Miss L. <i>h.</i>	MacWilliam, D. T.	Taylor, C. G. <i>a.al.</i>
Budgen, N. F.	Gandil, S. S.	Nutt, T. D.	Thomson, C. D.
Caldwell, A. J.	Gifford, R. C. D. <i>al.</i>	Oliver, L. M.	Thornton, Miss M. O.
Corfield, R. H. <i>a.al.</i>	Greenwood, A. W. <i>e.</i>	Pereira, G. H.	Whiting, Miss M. E. <i>a.</i>
Curtis, E. J. B.	Hamilton, J. E. S.	Popham, I. H. B.	Wickenden, H. W. <i>l.</i>
Douglas, F. <i>ch.</i>	Hamilton-Jones, L. M.	Rankin, D. R.	Wilkinson, F. E. <i>a.</i>
Elliott, B. <i>a.</i>	Haynes, G. G. T.	Richardson, R. W. <i>a.</i>	Wootton, Miss P. R. <i>a.al.</i>

N.B.—The small italic letters denote distinction in the following subjects respectively:—

*a.* = Arithmetic.  
*al.* = Algebra.  
*ch.* = Chemistry.

*e.* = English.  
*g.* = Geography.  
*h.* = History.

*l.* = Latin.  
*ma.* = Magnetism and Electricity.

# THE COLLEGE OF PRECEPTORS. CERTIFICATE AND LOWER FORMS EXAMINATIONS. CHRISTMAS, 1916.

## PRIZES.

- SENIOR.**  
**General Proficiency.**
1. Aufenast, F. (Ishier Prize.) Tollington School, Muswell Hill, N.
  2. Lloyd, T. E. (Pinches Prize.) The Palace School, Bewdley.
  3. Arnold, H. G. (Hodgson Memorial Prize.) Norwich High School for Boys.
  4. Goolding, M. B. Tollington School, Muswell Hill, N.
- JUNIOR.**  
**General Proficiency.**
1. Chitty, F. S. C. Mercers' School, Holborn, E.C.
  2. Allen, A. T. L. The Jersey Modern School, St. Helier's, Jersey.
  3. Meat, S. Shoreham Grammar School.
  4. Inch, J. V. Shoreham Grammar School.
  1. Patterson, A. T. Newcastle Modern School, Newcastle-on-Tyne.
- PRELIMINARY.**  
**General Proficiency.**
1. Tonkin, G. R. Newquay College, Cornwall.
  2. Davis, E. St. John's College, Finsbury Park, N.
  3. D'Authreau, F. J. The Jersey Modern School, St. Helier's, Jersey.
- English Subjects.**
1. Jarnet, R. C. Harleston House School, St. Lawrence, Jersey.
  2. Lloyd, T. E. The Palace School, Bewdley.

- Mathematics.**  
Norwich High School for Boys.  
The High School for Boys, Croydon.
- Modern Foreign Languages.**  
Tollington School, Muswell Hill, N.
- Classics.**  
Not awarded.
- Natural Sciences.**  
Tollington School, Muswell Hill, N.  
Tollington School, Muswell Hill, N.
- "Taylor-Jones" Prize for Scripture History.**  
Sutton, H. F. Private tuition.
- Soames' Prize for Scripture History.**  
Everett, L. W. Norwich High School for Boys.
- "Eve Silver Medal" for Proficiency in German.**  
Aufenast, F. Tollington School, Muswell Hill, N.
- Miss Mears Prize for Domestic Economy.**  
Stennett, Miss D. E. Ladies' College, Nantwich.

### Errata in list of successful candidates at the Home Centres.

#### BOYS.

##### Senior—Pass Division.

For "H. C. Walters" read "H. C. Waters."

##### Preliminary—Pass Division.

In the case of B. F. Besemer and H. W. Pack, for "Clapham College, Clapham Common" read "Clapton College, Clapton Common."

##### Lower Forms.

For "J. Seares" read "J. Scares."

## LIST OF SUCCESSFUL CANDIDATES AT COLONIAL CENTRES.

N.B.—The small italic letters denote Distinction in the following subjects respectively:—

<p><i>a.</i> = Arithmetic. <i>al.</i> = Algebra. <i>b.</i> = Botany. <i>bk.</i> = Book-keeping. <i>ch.</i> = Chemistry. <i>d.</i> = Drawing.</p>	<p><i>do.</i> = Domestic Economy. <i>du.</i> = Dutch. <i>e.</i> = English. <i>f.</i> = French. <i>g.</i> = Geography. <i>ge.</i> = German. <i>gm.</i> = Geometry.</p>	<p><i>gr.</i> = Greek. <i>h.</i> = History. <i>he.</i> = Hebrew. <i>i.</i> = Irish. <i>l.</i> = Latin. <i>lt.</i> = Light and Heat. <i>m.</i> = Mechanics.</p>	<p><i>ma.</i> = Magnetism &amp; Electricity. <i>ms.</i> = Mensuration. <i>mu.</i> = Music. <i>p.</i> = Political Economy. <i>ph.</i> = Physiology. <i>phys.</i> = Elementary Physics. <i>s.</i> = Scripture.</p>	<p><i>sc.</i> = Elementary Science. <i>sh.</i> = Shorthand. <i>sp.</i> = Spanish. <i>ta.</i> = Tamil. <i>t.</i> = Trigonometry. <i>w.</i> = Welsh.</p>
--	---	--	--	--

The signs \* and † prefixed to names in the Junior and Preliminary Lists denote that the Candidates were entered for the Senior and Junior Grades respectively. In the addresses, Acad. = Academy, C. or Coll. = College, Coll.S. = Collegiate School, Comm. = Commercial, Conv. = Convent, Elem. = Elementary, End. = Endowed, Found. = Foundation, H. = House, Hr. = Higher, Inst. = Institute, Int. = International, Inter. = Intermediate, Poly. = Polytechnic, Prep. = Preparatory, P.-T. = Pupil-Teachers, S. = School, Sec. = Secondary, Tech. = Technical, Univ. = University.

## THE COLLEGE OF PRECEPTORS.

## MEETINGS OF COUNCIL.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 28th of February, 1917. Present: Mr. R. F. Charles, Vice-President, in the chair; Prof. Adams, Mr. Barlet, the Rev. J. O. Bevan, Mr. Brown, Mr. Butler, Mr. F. Charles, Miss Dawes, Mr. Eagles, Mrs. Felkin, Miss Frodsham, Miss Lawford, the Rev. R. Lee, Mr. Longsdon, Mr. Morgan, Mr. Ritchie, Mr. Rushbrooke, the Rev. C. J. Smith, Mr. Starbuck, Mr. Thornton, Mr. Vincent, Mr. Whitbread, Mr. White, and Mr. Wilson.

Diplomas were awarded to the successful candidates at the last Christmas Examination (for list see page 54). The Diploma of Associate was granted to John Sidney Hawkes, who had completed his qualification at a previous examination.

Mr. R. F. Charles was appointed to attend as the representative of the College the Conference at the Board of Education on the 15th of March, for the purpose of considering a request by the War Office that the Committee of the British Prisoners of War Book Scheme should arrange with examining bodies in this country for the acceptance of the Records of Study of British Prisoners of War in enemy or neutral countries as part of a course of study or even of an examination.

The following persons were elected members of the College:—

Miss K. Browne, A.C.P., 23 Charlotte Street, Ballymoney, co. Antrim.

Miss E. A. Bull, Trevelyan, Hayward's Heath.

Mr. C. V. Coates, M.A. Camb., 93 Lechfield Grove, Church End, Finchley, N.

The following books had been presented to the College since the last meeting of the Council:—

By JOHN MURRAY.—Thomson's Study of Animal Life.  
By the OXFORD UNIVERSITY PRESS.—Forbes's Second Russian Book; Herbertson's Preliminary Geography; Holmes's Caesar's Campaigns in Britain; Lamborn's Rudiments of Criticism; Robeson's Historical Passages for Precise Writing; Scott's Short History of Australia.  
By RIVINGTONS.—Borchardt's Revision Papers in Arithmetic.  
By W. RICE, JUN.—The Journal of Education, 1916.  
Calendar of the Pharmaceutical Society of Great Britain.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 31st of March, 1917. Present: Sir Philip Magnus, President, in the chair; Prof. Adams, Dr. Armitage-Smith, Mr. Bain, Mr. Barlet, Mr. R. F. Charles, Mr. Cholmeley, Miss Crookshank, Miss Dawes, Mr. Eagles, Mrs. Felkin, Mr. Hawe, Mr. Maxwell, Mr. Millar Inglis, Mr. Pendlebury, Mr. Ritchie, Mr. Roscoe, Mr. Rushbrooke, Mr. Starbuck, Mr. Thornton, Mr. Vincent, Mr. Whitbread, and Mr. White.

The Secretary reported that the total number of entries for the approaching Newfoundland Examination was 4,200.

He submitted a letter from a member of the College drawing attention to the hardships to which schools situated on the East Coast were subjected through the War, and suggesting that schools more fortunately situated might render assistance.

The Rev. J. O. Bevan, Mrs. Felkin, Mr. A. Millar Inglis, and Mr. W. G. Rushbrooke were appointed the representatives of the College to attend the meetings of the Imperial Union of Teachers in July 1917.

The following persons were elected members of the College:—

Mr. J. S. Hawkes, B.A. Lond., A.C.P., H.M.M.S. "Gallinule."

Captain H. J. P. McAllen, A.C.P., 98 Herbert Road, Plumstead, S.E. 18.

A grant of £10 from the College Benevolent Fund was made to the widow of a former life member of the College.

A contribution of £5 was made towards the funds of the Federal Council of Secondary School Associations.

The following books had been presented to the College since the last Meeting of the Council:—

By the TEACHERS REGISTRATION COUNCIL.—Official List of Registered Teachers, 1917.  
By METHUEN & Co.—Oxenham's The Vision Splendid.  
By the UNIVERSITY TUTORIAL PRESS.—The University Correspondent 1916; Finch and Gardiner's Hugo's Hernani.

## WOLF CUBS.

THE eagerness and intelligence with which the modern small boy takes up any new activities or studies that appeal to him gives promise of his ultimately being the man we want for our future citizens, if he is properly encouraged. Our present standard of efficiency is not high enough to ensure our existence as a first-class nation in the competition which lies before us in the twenty years following on the War. So far the youngster between eight and eleven has not been taken very seriously, but there is no doubt that in this stage of his psychology his character can most easily be moulded were it only taken in hand as it should be.

In the Wolf Cub Movement, which is the junior branch of the Boy Scouts, the attempt is made to provide a means to this end, of which parents and teachers have not been slow to avail themselves. The small boys are organized in companies known as "Packs." These consist of anything from a dozen to fifty boys, or more, and are divided again into groups of six, under boy leaders. The Packs are organized by men (or more often women), whose aim is not so much to be the officer as the big brother or sister, ready to play with the "little brother"—sympathize with him, teach him all sorts of fascinating hobbies and accomplishments. The Cubmaster—or, as the Cubs call him, the "Old Wolf"—without either preaching or acting schoolmaster, finds himself able to wield a tremendous influence over the small boys. The youngster is, at this age, eager to imitate somebody or something; to pick up tips from anybody and everybody; to do something, and "pretend" at something, and make something. But as to whether his pattern is good or bad, the "tips" clean and wholesome or not, the occupations useful or merely mischievous, he is, perhaps, not over particular. In the Wolf Cub Pack he finds a big brother whose chief aim is to raise the boy's ideals to a high level; to develop his character along straight and healthy lines; to teach him to interest and amuse himself, and at the same time serve his fellow men.

But how does this busy man, with just an occasional free evening and Saturday afternoon, manage to keep some forty little boys at the highest pitch of enthusiasm, not merely over games, but over becoming useful and efficient citizens and loyal subjects of God and the King? He does it by following out a certain scheme of training and by expounding a certain set of ideals. This training is the Scout training (modified to suit the younger boys). These ideals are the Scout ideals. At the evening meetings and the Saturday afternoon parades there is a definite course of instruction and games to be followed out, with simple tests to be passed in various grades, and stars and badges to be gained. The ideals do not consist in what the boys would term "pie talk"; they are summed up in a few straight and simple ideas concerning the boys' honour and chivalry and trustworthiness, his duty to his God and his King and to those in authority. When the Cub understands the solemnity of a promise and the responsibility of membership in a brotherhood, he makes the following promise, in the presence of the Pack:—

"I promise to do my best to be loyal to God, the King, and the Law of the Wolf Cub Pack; and to do a good turn to somebody every day."

The Cub motto is "Do your Best." There are already in Great Britain many thousands of bare-kneed youngsters, clad in green jerseys and coloured neckerchiefs, all "doing their best." Daily their ranks are being swelled with eager recruits. Scarcely a day passes without letters being received at Head Quarters from boys wanting to be Wolf Cubs. But half of these little chaps have to be disappointed, and their enthusiasm nipped in the bud, as no officer is forthcoming in the district. If any one would like to know details of our work, I shall be delighted to hear from him. The Wolf Cub system has been equally successful in the country and in the city: in schools and out of them.

As an additional step we have issued for these boys a newspaper of their own—*The Wolf Cub*—such as will, we hope, appeal to them through its attractive yarns, &c., and will at the same time provide them with clean and wholesome matter that will tend to develop their minds and lead them to study for themselves.

ROBERT BADEN-POWELL.

# J. M. DENT & SONS, LTD.

FOR EVENING SCHOOLS.

**A Rapid French Course.** By RANDAL WILLIAMS and WALTER RIPPMMANN, M.A. [*In preparation.*]

This book has been written for the use of students of seventeen years and upwards, whether working in evening classes or privately. It deals with French life in an interesting way, contains a useful and extensive vocabulary, with many dialogues, and is well illustrated.

By WALTER RIPPMMANN, M.A.

**First Steps in French.** Crown 8vo, Cloth, 2s.

An alternative to "Dent's First French Book," containing many new and improved features, and based upon **Four New Wall Pictures** (price 4s. net). The first part of the book is also issued separately in **Phonetic Transcription** (price 6d. net), and a **Teacher's Handbook, The Early Teaching of French**, is also published (price 1s. 6d. net).

**Further Steps in French.** Crown 8vo, Cloth, 2s.

**Première Grammaire Française.** By H. E. BERTHON, M.A., Taylorian Lecturer in French in the University of Oxford. Fcap. 8vo. Cloth. 2s.

**First Exercises in French Grammar.**

**Further Exercises in French Grammar.**

By Miss F. M. S. BATCHELOR. Each 1s. 4d.  
These books are intended for use with "Première Grammaire Française."

**A French Notebook.** By C. E. HODGES, M.A. Fcap. 4to. 1s. 9d.

A skeleton notebook designed for a four years' course, and specially arranged for use in connexion with Berthon's "Première Grammaire Française."

**La France.** By G. GUIBILLON, Professeur au Lycée de Bordeaux. [*In Preparation.*]

An attractive series of pen pictures, with many drawings, of the varied aspects of French life, in town and country. It is a treasure house of valuable information presented in a scholarly form.

**French Songs.** With Airs and Tonic Sol-fa. Compiled by VIOLET PARTINGTON. Crown 8vo. Limp Cloth, 6d. net.

**Dent's First Spanish Book.** By F. R. ROBERT. Extra fcap. 8vo. Pp. viii + 184. 2s. net.  
[*New and Revised Edition.*]

**Composition Through Reading.** The Direct Method of Teaching English. By F. PICKLES, M.A., Head Master of St. George's Secondary School, Bristol.

**Introductory Book, 1s. 3d. net.**  
Book I, 1s. 4d. net; Book II, 1s. 9d. net.

By Dr. RICHARD WILSON,  
Editor of "Laureata," "In Golden Realms," &c.  
Crown 8vo. 1s. 6d. each.

**Coronata.** A Book of Poems in Rhyme and Rhythm from Shakespeare to the present day.

**Storytellers' Hall.** A Reading Book for Lower and Junior Middle Forms.

**Treasure Trove.** A Reading Book for Middle Forms.  
Each book contains eight illustrations in colour.

**The Old Testament for Schools.** Arranged and Edited by Canon MORLEY STEVENSON, M.A., and C. W. BAILEY, M.A. Crown 8vo. 512 pages. 2s. 6d.  
Contains the Bible narrative in historical sequence. All incidents and terms unsuitable for children's reading have been deleted.

**English Literature for Schools.** Edited by ARTHUR BURRELL, M.A. Fcap. 8vo, Cloth. Price 6d. each.  
"Eminently suited for school reading. They are well edited, well printed, and well bound; and they are cheap."—*School World.*

Messrs. J. M. DENT & SONS will be pleased to send Catalogues and Lists on application. Unless you apply they cannot be sent.

10-13 BEDFORD STREET, W.C.2.

# G. BELL & SONS, Ltd.

Just published.

**A Modern Spanish Grammar.** By E. ALEC WOLF, B.A., D.Lit., Modern Language Master, Hackney Downs School, London. 3s. net. Among the special features are:—(1) The abundance of material for oral work and verb drill; (2) the progressive vocabulary and use of colloquial idiom; (3) the complete verb lists and appendixes on the Irregular and Radica changing verbs; (4) the practical order of development; (5) the translation exercises.

**Recent Books by Marc Ceppl.**

**SURSUM CORDA.**

**TO MY FELLOW TEACHERS.**

WE are now in the third year of a war unprecedented in its demands upon the endurance, the courage, and the devotion of our people. But our end is not yet accomplished, and the great cause which inspires the national effort is about to make still further demands upon us. We believe that we are now approaching the decisive hour of the War, and though this means more sacrifice it means also sacrifice tempered by confidence and vision of an end which is not remote.

Under arrangements made between the Army Council and the Board of Education it has hitherto been possible to reserve for the service of the schools a certain number of men teachers of military age. The enemy have now brought the whole population of the German Empire under a scheme of National Service, and have impressed the inhabitants of occupied territory for forced labour. In order to do our part in countering his efforts and to secure at once the fullest measure of man power which, in expert opinion, is required to bring the War to a successful conclusion, we now have to give up more of the men remaining in our educational reserve. I am fully alive to the effect of this withdrawal on educational organization, and I do not blind myself to the fact that, for the time being, the school life of the country will suffer; but the call of the nation at this critical moment of its history cannot be denied, and I know that the teaching profession will meet this call in the spirit in which it has responded to every other call of duty since the beginning of the War.

In no age of our history has the character of the British people displayed itself to such advantage as in the present struggle. The Napoleonic Wars gave evidence of the tenacity and courage of our aristocracy and of that comparatively small proportion of the population which was then dedicated to the service of arms; but the land was full of division, of bitterness, and of misery; the voice of Party spirit was never silent, so that the impartial student, comparing the annals of those times with the story of our country during the present War, must feel how great has been the improvement in public magnanimity, in civic cohesion, and in that living and educated sense of ethical issues which is the governing condition of human progress.

In this War which, in a degree far higher than any war known to history, has enlisted the total energy of the nation, the teaching profession has borne an honourable part. When

war broke out the teachers did not hesitate to volunteer. Our returns last October showed that some 19,000 teachers from State-aided elementary and secondary schools had joined the colours, and of these many had laid down their lives or had been so gravely incapacitated by wounds or disease as to be unable to resume their former occupation. Those who remained behind have cheerfully grappled with the problems caused by depleted school staffs and the occupation of school buildings for military purposes, and wherever any form of suitable civic service has offered itself they have stepped forward to undertake it. In the schools themselves they have been active in spreading abroad among the young those elementary notions of simple duty and self-sacrifice, the better appreciation of which often grows out of great public calamities.

But every sound system of education assumes as its fundamental principle that society is organized for peace, and that in the cultivation of the arts of peace man obtains his highest development. It is not premature that we teachers should fix our eyes mainly on the greater future which lies beyond the end of the War. The proclamation of peace and victory in the field will summon us, not to complacent repose, but to greater efforts for a more enduring victory. The future welfare of the nation depends upon its schools. This is a truism, but it is a truism upon which it is wise to insist. Schools depend on teachers, and this means two things. First of all we must secure the teachers, and in this connexion we cannot disregard the many new forms of attractive activity which modern life is unfolding on every side. I regard the establishment on a sound basis of an efficient and devoted corps of teachers as a public necessity, less obvious, perhaps, but no less imperious than the maintenance of the Fighting Forces of the Crown. Secondly, the teachers must give of their best. Never will the effort of teachers be more needed than in the period of reconstruction which will ensue upon this War. I do not doubt that you will meet this need in a spirit which leaves no room for the perfunctory or niggardly performance of duty. Those who have borne the burden of these troublous times at home will join in the great work of education with their comrades who return from the field, having learnt once more the lesson that no experience in life is alien to him who aspires to teach.

The War has confirmed the conviction that the moral and material strength of the realm is founded upon qualities of character and intelligence which education forms and cultivates. The national system of education has indeed proved its worth in the War, but the future welfare and security of the Empire require that its influence should be deepened and widened.

I know that for this task the united efforts of many men and women, and of many agencies, both official and voluntary, are needed. The Board of Education, the Local Education Authorities and their officers, the Universities, the governors and managers of schools, must all do their part, endeavouring to enlist the sympathy and support of the parents and the active interest of industry and commerce. But I speak now as a teacher to teachers. The career of a teacher is an honourable and liberal profession; at its highest it is a vocation—a vocation which in every age has claimed the cheerful dedication of many noble lives. Let us rise to the height of our calling.

Board of Education,  
February 19, 1917.

### SIMPLIFIED SPELLING.\*

THE Simplified Spelling Society has for the past eight years urged the importance of a reform of the English spelling. Two years ago it was decided to promote a petition for a Royal Commission to deal with this subject, but, by establishing the Reconstruction Committee, the Government has provided other means of considering suggestions for reform, and this Society claims that the reform of English

\* A letter addressed to the Secretary of the Reconstruction Committee and signed by Gilbert Murray, William Archer, and Walter Rippmann.

spelling is eminently one that merits the practical consideration of the Committee.

If we adopted a rational spelling—that is, a reasonably consistent representation of good spoken English—(1) we should save at least a year in the education time of our children—a year that is much needed for the teaching of intrinsically valuable subjects; (2) we should be able to teach this essential subject in a reasonable and educative way, which would not necessitate the memorizing of inconsistently spelled words nor inculcate wrong ideas; (3) we should secure clearer, better speech, for good speech would be the best preparation for correct spelling, and the spelling would be a constant reminder of good speech; (4) the speech training involved would facilitate the acquisition of foreign languages; (5) the difficult work of teaching defective children would be appreciably lightened.

It is particularly in the elementary schools that the grave drawbacks of the present spelling are felt, and teachers in these schools are eager for the reform. There is reason to believe that the rapid acquisition of the spelling by Italian children is due not to superior skill on the part of the teachers or to superior intelligence on the part of the children, but rather to the rational character of the Italian spelling.

The advantages to be derived from adopting a rational spelling would, however, not be confined to our own children. Many of our fellow-subjects are of alien race, and it is of great importance that they should learn our language. The task of bringing education to India, for instance, is much complicated by the difficulties presented by our spelling, which are all the greater for those who do not start with a knowledge of the spoken language. The movement for spelling reform has received support from all parts of the Empire where English is taught as a foreign language.

That English should be known to every member of the Empire is a justifiable ambition, and we may also look forward to its increasing use in the rest of the world. There is evidence to show that the desire to study English is becoming more common in almost all foreign countries. Its commercial value and the richness of its literature, together with the simplicity of its grammar, explain its popularity, which, as all teachers abroad are agreed, would be vastly increased if the spelling gave real guidance to the pronunciation instead of presenting countless irregularities that have no relation to the spoken language. At a recent educational conference Lord Bryce said: "If English were simplified it would in a generation become the language of commerce all over the East, with enormous benefit to British trade."

The above considerations have convinced the members of the Simplified Spelling Society and many others who have signed the petition that, to quote a resolution passed at the last Imperial Educational Conference, "the simplification of English spelling is a matter of urgent importance in all parts of the Empire, calling for such practical steps in every country as may appear most conducive to the ultimate end in view—the creation, in connexion with the subject, of an enlightened public opinion and the direction of it to the maintenance, in its purity and simplicity among all English-speaking people, of the common English tongue." If this was true before the War, we submit that the arguments for an inquiry into the question of spelling reform have now gained in force and urgency.

The Simplified Spelling Society invites the Reconstruction Committee fully to consider this important reform, and the Society will gladly place at the disposal of the Committee evidence as to the progress which the movement has made in the Empire and in the United States of America.

RESEARCH SCHOLARSHIPS FOR WOMEN.—Two scholarships of £75 each are offered by *The Common Cause* (the organ of the National Union of Women's Suffrage Societies), to women who wish to qualify for positions as industrial chemists. Preference will be given to students willing to study at the Imperial College of Science and Technology, South Kensington, or the School of Technology, Manchester. Applicants, who must have a Science degree or its equivalent, should send in their names to the Scholarship Secretary, *The Common Cause*, 14 Great Smith Street, London, S.W. 1, giving full particulars of their qualifications and of the course of research which they wish to pursue.

## THE COLLEGE OF PRECEPTORS. HALF-YEARLY GENERAL MEETING.

THE Ordinary Half-yearly General Meeting of the members of the Corporation was held at the College of Preceptors, Bloomsbury Square, W.C., on Saturday, March 31st.

Sir PHILIP MAGNUS was appointed Chairman.

The minutes of the last meeting were confirmed.

The CHAIRMAN having appointed Mr. Walters and Mr. Whitbread to act as Scrutators, the meeting elected twelve members of the Council and three Auditors as follows:—

### AS MEMBERS OF COUNCIL.

Rev. F. W. Aveling, M.A., B.Sc., Glen Turk, Wimbledon Park Road South, Wimbledon, S.W.19.

A. W. Bain, B.A., B.Sc., F.I.C., Fairlight, Muswell Rise, Muswell Hill, N.10.

J. L. Butler, B.A., The Douglas School, Vittoria Walk, Cheltenham.

E. M. Eagles, M.A., The Grammar School, Enfield.

Mrs. Felkin, 119 Grosvenor Road, S.W.1.

Rev. R. Lee, M.A., Ealing Common, W.5.

Sir Philip Magnus, M.P., 16 Gloucester Terrace, W.2.

C. Pendlebury, M.A., Arlington House, Brandenburg Road, Gunnersbury, W.6.

W. G. Rushbrooke, LL.M., B.A., 13 Cathcart Hill, N.7.

A. P. Starbuck, B.A., St. John's College, Green Lanes, N.

Rev. Canon Swallow, M.A., The Mall House, Wanstead, Essex.

W. Vincent, Loughton School, Loughton, Essex.

### AS AUDITORS.

H. Chettle, M.A., 76 Ridge Road Hornsey, N.8.

A. E. C. Dickinson, M.A., LL.D., L.C.P., Grove House, Highgate, N.6.

J. Blake Harrold, F.C.R.A., A.C.I.S., 61 Streatham Hill, S.W.16.

The Report of the Council was laid before the Meeting, and was taken as read, a copy having been previously sent to every member of the College. It was as follows:—

### REPORT OF THE COUNCIL.

THE Council beg leave to lay before the members of the College the following Report of their proceedings since the issue of their last Report:—

1. A Course of Twelve Lectures to Teachers on "Aspects of School Practice" has been delivered by Prof. John Adams, and a Course of Twelve Lectures on "The Essentials of Educational Psychology" was begun on February 10. The Council hope to be able shortly to arrange, in connexion with these lectures, for the adoption of a scheme of training.

2. The Christmas Examination of Teachers for the College Diplomas began on the 1st of January and ended on the 6th. It was attended by 116 candidates—2 for the Fellowship, 26 for the Licentiate, and 88 for the Associateship. Since the issue of the last Report the Diploma of Licentiate has been conferred on 21 candidates, and that of Associate on 61, who had satisfied the prescribed conditions. The Council have decided to discontinue the Summer Diploma Examination. A Practical Examination for Certificates of Ability to Teach was held in October; two candidates were examined.

3. (a) The Christmas Certificate and Lower Forms Examinations were held on the 4th–9th December, and were attended by 3,689 candidates.

(b) For the Professional Preliminary Examination, which is to be held on the 6th, 7th, and 8th March, the number of entries is 260.

4. The Council have instituted an Examination for Certificates of Proficiency in Commercial subjects. The first Examination will be held in December 1917.

5. Since the issue of the last Report seven members have been elected, and six have withdrawn from membership. The Council regret to have to report the death of the following members:—Mr. W. N. Barker, Miss F. E. Bull, Mr. C. Clough, Rev. C. W. Ganly, Miss P. C. Hehl, Lieut. J. A. Monkhouse, L.C.P., Mr. D. Murray, Mr. G. A. Reinicke, Mr. J. R. Sieling, and Mr. G. Tweedy, L.C.P.

6. At a meeting of members of the College, held on the 11th October, Mr. Norman MacMunn delivered a lecture on "The New Discipline." A joint meeting of the Private Schools Section of the College and the Private Schools Association was held at the College on the 1st of March, to consider "The Orders of the Food Controller as they affect Boarding Schools."

7. (a) Representatives of the Council have taken part in the work of the Teachers Registration Council, the Federal Council of Secondary School Associations, the Teachers' Training Committee, the Joint Scholarships Board, the Committee of the Conference of Educational Associations, the Secondary School Teachers' War Relief Association, the League of the Empire, the Joint Scholastic Agency, and the Joint Agency for Women Teachers.

(b) *Teachers Registration Council.*—The Teachers Registration Council issued, on the 16th February, the first Official List of Registered Teachers, which contains in alphabetical order the names of 17,628 teachers who have been admitted to the Register. It is expected that the List will be brought up to date and published at regular intervals.

The Registration Council has also devoted much attention to the position brought about by the suspension of the proposals contained in the Board of Education Circular 849. An effort is being made to carry out such of the proposals as are possible during the continuance of the War, and in particular to institute an Advisory Committee or School Examinations Council which shall be able to advise the Board of Education on the best method of bringing about some reduction in the present diversity of examination standards without necessarily abolishing existing examinations.

The Council has recently issued a statement in support of a substantial improvement in the conditions of teaching, especially in regard to salaries, pensions, and retiring allowances, and has approached the Director-General of National Service with a suggestion that teachers who are unfit for Military Service should be permitted to remain in the schools and not be withdrawn for other work, since teaching is a most important form of National Service.

The Council is now engaged in drafting a short statement concerning Reconstruction in Education, and this will be issued in due course.

(c) *Federal Council.*—The College of Preceptors was represented at the forty-first meeting of the Federal Council of Secondary School Associations, on Wednesday, November 29th, held at the University of London Club. The question of War Bonuses was discussed at considerable length, and the following resolutions, among others, were passed:—

(I) That this Council considers it desirable and necessary that War Bonuses should be granted to Secondary School Teachers.

(II) That the above Resolution be communicated to the Executives of the several Bodies represented on the Federal Council, and that their consent be requested to the approaching by the Federal Council of the Board of Education with a view to pressing for a Special Grant from the Treasury to meet this urgent need.

(d) *League of the Empire.*—During the last six months the energies of the League of the Empire have been mainly concerned with War work. The League's depot at 28 Buckingham Gate has now sent out nearly three quarters of a million gifts to the hospitals, prisoners of war, to men in the trenches, and those in distress through the War. Gifts of colours and shields have been made to the Overseas contingents, Queen Alexandra and other members of the Royal Family having made the presentations. Souvenirs consisting of a specially bound volume of Shakespeare are being given to all soldiers disabled in the present War. Two general presentations have taken place, one at St. Dunstan's, where H.R.H. Princess Louise presented the books, and the other at the Star and Garter, where H.R.H. Princess Christian gave the Souvenirs. The Correspondence Branch of the League numbers now over 36,000 members. Preparations are being made for an Empire Day Service in St. Paul's Cathedral on June 2nd, and for the Annual Meeting of the Imperial Union of Teachers in July. To this Conference representatives have been invited from Teachers' Associations in the United States as well as representatives of those Nations now allied to the British Empire.

(e) *Secondary School Teachers' War Relief Association.*—This Association is permitted to make use of the excellent organization of the Assistant Masters' Association, and is thus enabled to effect considerable economies of time and money in making inquiries and in the distribution of relief.

(f) *The Joint Scholastic Agency.*—The effect of the War on the Agency during the year 1915–16 was necessarily to diminish somewhat its normal success. Many vacancies had to be filled at short notice and during term-time when suitable candidates were unable to apply, and many appointments were temporary—while the present occupant was with the forces—a condition that did not attract the best men. Many posts also were filled by Assistant Mistresses. At the present time the Committee have under consideration a scheme for incorporating the Agency. If this should take effect it would involve an abandonment of the existing contract of guarantee, and the promotion of a company to continue and enlarge the work hitherto carried on. The Council of the College have approved the principle of the scheme, and have given authority to their representatives on the Committee to carry out the scheme under certain conditions.

(g) *Joint Agency for Women Teachers.*—In this Agency the influence of the War was felt in two ways. The actual number of posts filled last quarter was rather higher than usual, about one-third being in Mixed and Boys' schools; on the other hand, many teachers have left the profession for work more definitely connected with the War. There was especially great dearth of Science and Mathematical teachers.

March 7, 1917.

PHILIP MAGNUS,  
President of the Council.

The Report of the Council was adopted.

The accounts were approved and were signed by the Chairman.

The Report of the Auditors was adopted.

The Report of the Dean, which was adopted, was as follows:—

#### THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you some details concerning the Christmas Certificate and Lower Forms Examinations, together with extracts from the reports of the Examiners.

The examinations were held on the 4th-9th of December at the following places in the United Kingdom:—Aberdeen, Bewdley, Birmingham, Blackburn, Blackpool, Brighton, Bristol, Cardiff, Carlisle, Carmarthen, Cheltenham, Chulmleigh, Colwyn Bay, Croydon, Ealing, Edinburgh, Exeter, Glasgow, Goudhurst, Harrogate, Hastings, Herne Bay, Holsworthy, Horsham, Jersey, Knowle, Leeds, Leicester, Liverpool, London, Manchester, Margate, Muswell Hill, Nantwich, Newcastle-on-Tyne, Newquay (Cornwall), Norwich, Nottingham, Ongar, Penketh, Plymouth, Portsmouth, Preston, Richmond, Sheffield, Shirley, Shoreham, Southampton, Southend, Southport, St. Leonards, Sunderland, Swindon, Taunton, Torquay, Totland Bay, Weston-super-Mare, Wisbech, Woodford, Worthing, York.

The Examinations were also held at the following Colonial Centres:—Abeokuta, Accra, Cape Coast Castle, Ibadan, Lagos (West Africa); Nairobi (East Africa); Cape Town, Johannesburg, Kimberley, Lydenburg, Oakford, Pietermaritzburg, Potchefstroom, Uitenhage, Umzinto (South Africa); Batticaloa, Colombo, Manepay, Wadduwa (Ceylon); Grenada, St. Vincent (West Indies); Malta.

The total number of candidates who sat for the Certificate Examination was 2,749—2,144 boys and 605 girls.

The following table shows the proportion of candidates who passed in the grade for which they were entered:—

		Examined.	Passed.	Percentage.
BOYS.	Senior .....	261 .....	146 .....	56
	Junior .....	798 .....	439 .....	55
	Preliminary .....	805 .....	597 .....	74
GIRLS.	Senior .....	91 .....	38 .....	42
	Junior .....	182 .....	116 .....	64
	Preliminary .....	254 .....	206 .....	81

The above table does not take account of those candidates who obtained Certificates of a lower grade than that for which they were entered, nor of those (358 in number) who entered for certain subjects required for professional preliminary purposes.

The number of candidates who sat for the Lower Forms Examination was 940—612 boys and 328 girls. Of these 458 boys and 261 girls passed, or 75 and 80 per cent. respectively.

W. G. RUSHBROOKE.

### EXTRACTS FROM EXAMINERS' REPORTS.

#### Scripture History.

**Senior.**—The work had been well prepared: there were but few bad mistakes, most candidates wrote as if interested in the subject, and the average standard was good. The faults were an occasional tendency to write off the point, and sometimes a want of proper assimilation of imparted knowledge. In the Old Testament sections there were a few papers of exceptional excellence. In the New Testament there were a few excellent papers on the Epistle to the Galatians; otherwise the work, though good, was not remarkable. Most of the papers were well written and well arranged.

**Junior.**—This was a very uneven set of papers, ranging from excellent to very poor, but, considering the many difficulties of the time, it may be said that the average standard was satisfactory. The best answering was on the Book of Joshua and on the Acts of the Apostles. Much of the work here was excellent, careful, intelligent, conscientious. So, too, was much of the work in the section dealing with the Gospel of St. Mark; but in this section many candidates did only just enough to secure a pass—no real interest seemed to be felt in the subject. A cheering note of the work was the growing intelligence in the treatment of the Old Testament.

**Preliminary.**—The work was very good. More attention should have been given to the abrupt ending at St. Mark xvi, 8; but on the whole, the Gospel was well known throughout. Answers on the Old Testament generally require more thought in the framing, and therefore are apt to be less complete; but the periods from the Judges to Ahab appear to have been studied very thoroughly.

**Lower Forms.**—On St. Mark many excellent papers were written. Some missed the point of the healing of the paralytic as a proof of Divine power, and there was confusion in some minds between the

Chief Priests, the High Priest, and Pilate the Governor. In the Old Testament sections the answers were generally incomplete, though a few were remarkably good. The story of Ruth seemed to have received but little attention, and the life of Moses was not well known, but more acquaintance was shown with the lives of the Kings and the religious influence of the Prophets. These young people evidently take their work in a serious and earnest spirit.

#### English.

**Senior.**—The Senior candidates acquitted themselves better than usual. They had worked at their Literature subjects more thoroughly, and their Essays were on a higher level.

Part I: (a) The answers to both the "Tempest" and "Julius Caesar" were satisfactory, often showing independence of thought, but many answers would have been more effective had they been more concise. (b) Chaucer had been studied carefully by nearly everyone who chose that subject, with the result that frequently more marks were obtained on the Chaucer than on the Shakespeare paper. (c) The answers on "Bacon's Essays" were of scarcely any value—few of the writers had understood their author.

Part II: The Grammar paper was on the whole done well. The candidates, however, showed little exact knowledge of the meaning of various selected pairs of words, and very few could give instances of metaphor occurring in common daily talk. The Essays were generally earnest and clear in expression, yet disfigured by spelling that often made serious subject-matter appear ludicrous.

**Junior.**—Literature: The answers on Shakespeare were good and usually intelligent. Many answers, however, were too curt, and therefore inadequate. The two plays seemed to have been read with real interest, and not as a task. Scott and Dickens were selected by a small percentage of candidates, but these were well acquainted with their respective books.

Essay: The Essays were only moderately good as a rule, though the writers were equally at home in each of the topics provided, but it seemed as though they had reserved their force and enthusiasm for Shakespeare, and had little left to inspire a convincing essay. There were, however, some striking exceptions to this general statement.

Grammar: Analysis was generally good. Parsing was poor, because it shirked the important points, and dilated on what was obvious. There were also on the average good answers to the question on Pronouns, as well as to the one on various meanings of the word "or." The question asking for a single word to express the sense of a phrase was answered well by a few, and badly by most. And there was once more displayed the usual inability to distinguish between a Transitive and an Intransitive verb. On the whole this paper was answered with considerable credit to the candidates.

**Preliminary.**—Literature: The books had all been read carefully, and the average mark gained was quite satisfactory. "Hiawatha" was well known, and the reproduction of the stories contained in it were generally speaking, meritorious. The poems of Macaulay were well remembered, but the proper names were too often misspelled. The least satisfactory question in this paper was that relating to the spread of the news of the Armada's approach; very few gave more than a small proportion of the places mentioned. The papers on "Ivanhoe" were hardly so good; from the fragmentary nature of some of the answers it seems possible that certain classes had only read "selections" of the novel.

Composition: The general result was quite good; very few candidates failed to obtain the qualifying mark. Most of them wrote a very fair Christmas letter, though some few forgot to insert address, date, and signature. The writing and spelling were almost universally satisfactory; there was very little careless or untidy work.

Grammar: The straightforward questions dealing with the grammatical points usually included in this paper were well done, but some of the weaker candidates failed to cope successfully with those which were off the normal lines. This was noticeable in two instances especially. The present tense *only* of the verbs used in the poem was asked for, in order to see if the candidates knew the simple form of the verbs, "stole, set, rose," &c.; the majority either gave two lists (of past and present) or omitted the present altogether. Again, as no names were mentioned in the poem, its meaning could only be properly understood by knowing who the people were to whom the pronouns referred. The simple way to show this was to write a line or two describing the incident; but nearly everybody drew up a long list of the pronouns, giving much irrelevant information about each in turn. Some missed the point of the story by misapplying the last two lines to the nurse instead of to the mother; others thought that "Rose" was the nurse's name. The parsing might have been better. The words which gave most trouble were "like," "must," and "watching." One of the commonest faults was to insert unnecessary and incorrect details—*e.g.* to give gender, number, case (and even person) to the present participle, and to assign gender and case to verbs.

**Lower Forms.**—Grammar: The Analysis was satisfactory, and the Parts of Speech were recognized well, but there was a sin-

gular ignorance of possessive cases, and the past participles were not often correctly given. Candidates should be trained, when they are exercised in questions on different meanings belonging to the same word, to construct sentences that clearly indicate their knowledge, instead of sentences like "He has a profession," or "The rail is there." The question on formations of verbs, &c., was well answered. But the question on punctuation clearly penetrated an area to which the candidates were absolute strangers. With the exception of a few uninviting scrawls, the presentation and handwriting of the papers were good.

Dictation, &c.: Generally, the spelling was satisfactory. The weakness in this paper is nearly always in the composition of the reproduced matter. Candidates do not construct sentences properly; sometimes they spell badly; and they have no idea of punctuation. Very few present a composition which, as a simple independent essay would be faultless. But the matter of the Reproduction was well known; and some candidates gave a more explicit presentation of its point than the original had provided. Some handwriting was excellent; most very good; the execrable exhibitions were very few indeed.

Literature: There was a preponderance of candidates in favour of the paper on "Macaulay." In the answers to this paper especially there were sometimes welcome evidences of very careful preparation. The general standard attained, however, was not high. Questions A 5 and B 6 were very poorly done; scarcely any one noticed the alliteration in Question A 5. Such statements as that Horatius was "bored by the joyous crowd," and that "Bohemia's plume" was "three oyster's feathers," indicate too great a dependence on oral teaching, and suggest the need of more practice in writing answers.

### English History.

Senior.—The candidates, as usual, fall into two markedly distinct groups—those who passed generally well and those who failed, generally completely. Among the latter candidates such answers as the following were not infrequent:—(1) "William Wilberforce instituted the slave trade. He used to go to Africa and carry off black men and women with every form of cruelty. In his latter days he saw the error of his ways and tried to abolish the trade." (2) "*Habeas Corpus* stated that no Catholic was to be allowed to preach in public." (3) "The Act of Settlement (1701) said that the sons of William III were never to have the Crown." (4) "Dean Colet was a Greek." (5) "Maria Theresa attacked Salonica." (6) "Tippoo Sahib shut up people in the Black Hole." It is difficult to see why candidates prepared like this should be sent up for the Senior Examination. Many candidates, even good ones, lost marks by not attending to the limitations of a question. For instance, in a question about the *Protectorship* of Cromwell, candidates wrote at length about every part of his career except the years when he was Protector. When asked to compare the political condition of the working classes to-day with what it was in 1760, they wrote about the social or industrial condition—seldom a word about the political.

Junior.—Candidates mostly satisfactory, but many very weak. Some of these lost marks through insufficient practice in writing answers to questions. Thus, when asked "Where are the following places and for what are they famous?" they would say: "Dunbar, Scotland, a battle," or "Shrewsbury, England, a battle." To such answers, obviously, few marks could be assigned. Some questions to which good answers might have been expected, even from Junior students, were answered badly by almost all who attempted them—e.g. those on Canute, Edward II, William III. The most encouraging features of the examination were greater accuracy and better composition on the part of the majority of the candidates.

Preliminary.—The work, as usual, varied greatly, but there were one or two sets of papers which reflected much credit on the teaching. Questions on war, especially those relating to the Navy, produced, perhaps, the best answers; but Colonial history was little known. On Canada, for example, every boy and girl seems to know about Wolfe, but many placed his capture of Quebec in Victoria's reign. The number who could write intelligently on the points in dispute between Charles I and Parliament was very small, and the Bill of Rights was very often confused with the Petition of Right.

Lower Forms.—The work was above the average. The dates of certain kings were better known than formerly, but many who knew the dates assigned events within those years to other reigns. Practically no one knew the number of members in the House of Commons, while many guessed "23"! This showed the influence of newspaper placards, on which "the 23" often figured in the month before the examination. It might be worth while to explain the elements of Parliamentary history backwards—to describe Parliament as it is, and then proceed "from the known to the unknown." The history of Parliament seems to have received astonishingly little attention.

### Geography.

Senior.—The following passages in the Report on the last Midsummer Examination apply equally to the recent Examination:—

"These papers on the whole are weak, and quite below a 'Senior' standard. Many candidates appear to have read nothing but what was contained in inferior or antiquated textbooks." "There was much carelessness in reading questions." To the question "Why is Australia so dry?" such answers as the following were given:—(a) It has no mountains, (b) it is surrounded by a ring of mountains, (c) it is desert, (d) it is sandy, (e) it has no (or few) rivers. To the question "Why are the lowlands of Scotland more wealthy, &c.?" there were the following answers:—(a) They have more rivers, (b) they are protected from cold winds; and in most cases there was no mention of coal and iron. Few could give the boundaries of Russia correctly on a sketch-map, and few—about ten—could draw a contour map respectably, though the question has been asked recently in every paper.

Junior.—A very uneven set of papers. The map (Question A 1) was fairly well filled in, though in many cases the towns and rivers in the New World were omitted. Question A 2 was selected by most candidates, and was on the whole unsatisfactory. The choice of wet regions was often unfortunate. Some chose regions that are generally regarded as dry, others selected regions that were too extensive, e.g. "West side of America" or "India," while others singled out regions that are famous neither for rain nor for the want of it. Naturally the reasons advanced were unsatisfactory. A 3 was astonishingly weak; A 4 produced some thought, though few of the reasons given were sound.

Section B. Europe: The map was satisfactory, but few candidates had a clear idea of the position of Kola peninsula. Question B 6 was fairly well done, but few candidates were able to indicate satisfactorily the advantages or disadvantages derived from the position of the town. The same can be said of such candidates as selected Question C 6. In answer to Question B 8 many candidates selected the Suez Canal, some even the Panama, as canals of Europe. Answers to Question B 10 and C 10 showed in most cases a certain amount of original thought, though they were not always convincing.

Section C. Africa South of the Sahara: This section was the most popular. The map was very fairly filled in. The maps drawn in answer to Question C 7 were singularly poor.

Section D. Was selected by only a few candidates. The results, with the noteworthy exception of a certain group of papers, were exceedingly poor, and gave the impression that most candidates had had no previous preparation in the subject.

Preliminary.—The general impression is that the papers this year were rather better than usual; but, notwithstanding this improvement, most of the old defects were apparent, especially (a) the usual muddling-up of sections in spite of the italicized instructions both at the head of the paper and at the head of each section; and (b) the lack of diagrams and illustrations and sketch-maps. The filling in of the map was, as a rule, satisfactorily done. The other questions, both physical and regional, were also satisfactorily attacked. Of mistakes common to a large number of papers the most striking were: (a) the ascription of coal-mining to the special industries of Malta ("a coaling station," evidently); and (b) the ever-recurring description of a volcano as a "burning mountain."

Lower Forms.—These papers were very varied: some were very good indeed, others very much the reverse. A weak point was the physical geography and its application, especially noticeable in the attempts to answer Question 4, which asked for the "chief physical features" of a district, and the "effect" of these features on occupations. On the other hand, there was much good work—evident particularly in the answers to the questions asking why such and such a town has gained importance (Question 5), and why population is denser (Question 8) in one part of a country than in another. Put in this form, the question elicited plenty of signs that the candidates' ideas of physical geography, if latent, were nevertheless in existence, and only needed drawing out. For the rest, there was an intermittent recurrence of all the old mistakes—no location dots in the maps, rivers running across mountain ranges, mountains "bursting" clouds and so making rain, volcanoes described as "burning mountains," linen made from cotton (or wool)—but in distinctly less numbers.

Lower Forms.—South Africa: A very creditable and remarkably even set of papers, with few poor results and none of exceptional merit. The chief fault was want of explicitness in giving localities, especially in answer to Question 3, where most candidates were content to describe Paarl, &c., as "in the Cape Province." The map, Question 1, was fairly well filled in. The answers to Question 7 were astonishingly poor. Section (b) in Question 8 was satisfactorily answered, but the answers to Sections (a) and (c) showed that conditions affecting climate are imperfectly known.

### Arithmetic.

Senior.—The easier questions were usually done well, but the decimal work was frequently incorrect owing to over-contraction. Comparatively few candidates knew the number of square chains in an acre, and of these the majority worked the "cost" sum, involving

them in decimals, instead of by the much easier and more direct method of "practice." The work on percentages and profit was very poor, and seemed to show an unintelligent reliance on formulae. The use of factors as a means of lightening arithmetical calculations was not sufficiently appreciated, e.g. in finding the square root of a perfect square already expressed in factors, fully 75 per cent. of the candidates multiplied the number out and then found the square root. The method of setting out and working a compound interest question still leaves much to be desired. Formulae should not be used at this stage, and the working should not be carried beyond four decimal places of a £.

**Junior.**—The work sent up was, on the whole, very satisfactory. A large proportion of the candidates gave correct answers to the first four questions, which involved simple, practical, and straightforward work, excepting, however, a certain number who were weak in fractions. A frequent error needs notice—many candidates wrote

$$\frac{5\frac{1}{2} + 6\frac{1}{2} + 7\frac{1}{2}}{\frac{1}{2} + \frac{1}{2} + \frac{1}{2}} = \frac{18\frac{3}{2}}{\frac{3}{2}} = 18.$$

Such a mistake should not occur. A question on income-tax was not answered with sufficient frequency, though, on the other hand, a fairly hard question on interest was, as a rule, well done; so, too, was a question on square root. Generally the papers were well written, but certain candidates so muddled up their calculations as to be quite unintelligible. Masters should insist on clear and intelligible exhibition of work.

**Preliminary.**—The easier questions on the more elementary section of the course, except No. 2, were answered fairly well. The harder questions (7-10), although presenting no special difficulties to candidates adequately prepared, were not successfully solved by so high a percentage as one might expect. A too common fault of the weaker work was the use of lengthy roundabout processes where short direct ones were fairly obvious. In some cases the "rough" work was intermixed with the normal work, which should have been kept apart and set out consecutively in order. There were some instances of results sent in without any work showing how they were obtained.

**Lower Forms.**—While the number of failures was not large, and several candidates obtained full marks, there was a larger proportion of mediocrity than usual. A very common mistake was the omission of a "0" in the quotient of a division sum. Slovenly marginal work frequently caused inaccuracy, and in fact the practice of working out the details of a sum in one place and putting a summary of the results in another (which is sometimes a different sheet of paper) might with advantage be discouraged.

### Algebra.

**Senior.**—There were many weak papers, but the better papers showed much promise and some were excellent. Factorization was generally weak, and simplification often spoilt by inaccuracies. The problem of Question 3 was generally correctly answered, except in the weakest papers. The equations were fairly well done, but a good many could not interpret  $21(x+1)^{-1}$  correctly, although a knowledge of indices is required by the syllabus. The question in proportion was often begun rightly, but in many cases  $\sqrt{a} + \sqrt{b}$  was treated as equal to  $\sqrt{a+b}$ . There were some, but not many, good answers to Question 7. The better candidates gave excellent answers to both questions on Progressions. In the Graphs A was generally well done, but only a few good answers were given to B and C, the equations of the latter being not infrequently calculated as  $x+y=24$ .

**Junior.**—The paper was easier than it seemed at first sight. The first question needed but mechanical work, and was correctly done by the majority of the candidates. The most disappointing results of the paper fell to Question 2. The majority of the candidates gave no continuous answers—nothing but a series of terms. Questions 3 and 4 were satisfactorily answered, as also were Questions 5 (i) and (ii); but Question 5 (iii), though often worked out at great length, and (almost as a natural consequence) wrongly, from inability to see its easy resolution into two simple equations, gave very imperfect results. The Quadratic Question 8 (A) was frequently muddled. Not many candidates attempted Question 8 (B).

**Preliminary.**—The papers showed a distinct improvement on those of a twelvemonth ago. Insufficient attention is still given to brackets, substitution, division, and multiplication. In fractions, adding numerators and denominators and cancelling terms instead of factors are still far too common. Problems were better.

**Lower Forms.**—There was a marked recovery of standard. Grounding is still not good enough, and the answers to Questions 1 and 2 showed far too many errors in principle.

$$\frac{1}{2} - \frac{1}{3} = \frac{1}{6}, \quad 6pa^3 + pa^3 = 7p^2a^3,$$

and like errors occurred too often, and brackets and division need attention. Factors and problems were good.

### Geometry.

**Senior.**—A fair proportion of the candidates, especially of those who took the A Paper, knew their bookwork; but the performance on the riders was poor on the whole. Those who took the B Paper were very varied in quality; some did the drawing very neatly and correctly, knew ordinary constructions, and at the same time showed good knowledge of theory; others were thoroughly bad in both parts of the subject, and evidently knew nothing about it.

**Preliminary.**—From many centres satisfactory work was received, but there were several centres at which the candidates had scarcely any knowledge of the subject. The chief faults were lack of references, congruence of triangles inferred from equality of two sides and non-included angle or from equality of three angles, wholly illogical development of proofs by super-position, the substitution for a general proof of a *verification* by measurement from a particular figure, and—in Paper B—an absence of knowledge of the theoretical portion of the syllabus.

**Lower Forms.**—Taken generally, the answers were quite satisfactory, but at some centres the candidates had practically no knowledge of the subject.

### Mechanics.

**Senior.**—With one or two exceptions the candidates showed extremely superficial knowledge of the subject, a loose grasp of mechanical ideas, a want of power to grasp the conditions of the problems, and a lack of the mathematical ability and practice necessary to work out their solutions.

**Junior.**—Of the few candidates presented nearly all passed the examination and solved the problems. But the bookwork was deficient.

### Book-keeping.

**Senior.**—The papers were not up to the level of the last few examinations. The customary weakness in the meaning of the terms in Question 1 was shown. While the calculations in Questions 2 and 4 were generally well done, the necessary entries were poor.

**Junior.**—The papers were on the whole better than in past examinations. Most candidates did all the books, and fewer than usual confined themselves to the journal only. This one book of primary entry is not now asked for, and candidates should be warned to do as directed in the paper, where what is required is clearly set out. The calculations were often badly done, and so was "Interest on Capital."

**Preliminary.**—Although the ledger was not asked for, and candidates were confined to books of first entry, the average level of marks was little, if any, higher than at the last examination. The terms asked for, some of which were very common, were poorly done.

### Mensuration.

**Senior.**—About one-half of these candidates showed a very fair knowledge of the subject, though there was much inaccuracy. Many of the candidates relied too much on special formulae instead of working out the problems from first principles.

**Junior.**—Some very good sets of answers were received. The methods employed were usually good, and the calculations accurate.

### French.

**Senior.**—The passages for translation proved difficult, and many candidates failed to make out the general sense. The fault of poor English still remains. Almost all candidates showed sufficient knowledge of words and construction to enable them to attempt the translation into French; but great carelessness in agreements was shown. In the free composition there was an improvement; several candidates wrote quite good essays. The grammar questions received careful answers.

**Junior.**—The absence of care in writing French words is still lamentable. The impression is given that these candidates have not grasped the essentials of either accidence or syntax, and have no feeling of security in writing even the simplest phrases. Still, there was much good work, and the composition showed improvement.

### Welsh.

**Senior.**—The work as a whole was very fair, although no paper reached a high standard. The candidates were evidently colloquially conversant with the language, but neither the translations nor the answers to the grammatical questions showed adequate exercise in composition or reading of authors in Welsh or translation from Welsh to English. Some showed more intimate acquaintance with advanced grammar and the idioms of the Welsh language.

**Junior.**—The work was on the whole good. The translations were good, particularly those from English to Welsh. The translations from Welsh to English showed the need of continuous exercise in English composition and the continual perusal of good Welsh literature. The grammar was well done as far as the nouns and adjectives.

**Preliminary.**—The work was quite satisfactory. The translations were good, and the grammar questions were all well attempted. More care should be taken with the spelling of simple Welsh words.

### Latin.

**Senior.**—The set books had been well prepared by a considerable number of the candidates, both as to Translation and subject-matter. The compulsory Unprepared Translation was usually the weakest point, only a few really good versions having been sent in. The grammar was often satisfactory, but the answers on Syntax were weaker than those on Accidence. The Translation of Sentences into Latin was of varying merit, some quite creditable versions being sent in, while those of the weaker candidates were often quite worthless. Of the small number of candidates who chose Unprepared Translation instead of Prepared Book four (all from Home Centres) obtained the mark of distinction; of those from Colonial Centres two-thirds failed to reach the minimum mark for passing.

**Junior.**—The Set Books, Caesar and Virgil, had been fairly well prepared at most of the Home Centres; several renderings were both accurate and pleasing, and there were no signs of memorized translation. The subject-matter of both books had received attention and had excited interest. The Colonial work was very poor; at many centres the translation was left unattempted. The Unseen Passages were not attacked intelligently; there was too much guessing at the sense, too little regard for the grammar. The questions on Grammar were answered satisfactorily on the whole, except those on verb-accidence and syntax. A few candidates sent up very promising work in Composition, avoiding bad blunders and showing a very fair grasp of ordinary constructions; but the copies of the rest were marred by violations of the simplest rules of syntax and serious mistakes in accidence.

### Light and Heat.

**Senior.**—The Light portion of the paper yielded some very good answers, especially to Questions 2 and 3. The question on the formation of shadows was answered unsatisfactorily, the importance of the fact that light travels in straight lines being insufficiently appreciated. The description of the eye was good as a rule, but pupils should be taught that the principal amount of the bending occurs at the front surface of the cornea, and only about one-third at the lens. The answers on Heat were less satisfactory. There was no correct answer to Questions 7, 10, 12, or the second part of Question 9. The use of a knowledge of the dew point was not shown well, and there was no good account of the experimental part of the determination of specific heat.

### Magnetism and Electricity.

**Senior.**—The candidates did not seem familiar with the section on Electrostatics. Question 6, which deals with a very fundamental point, was not answered. The omission to teach it leaves a gap between electrostatics and current electricity. There were some good answers to Question 10, but candidates did not appear to know that alternating currents must be employed. Pupils should be taught the conventional methods of representing on a diagram the details of the electric circuit.

### Elementary Physics.

**Junior.**—Apart from one most deplorable batch of scripts, the answers sent in to this paper from home centres were satisfactory; the scripts from colonial centres were rather poor. The method of finding areas by counting squares seemed familiar, though the counting itself was done rather carelessly. Archimedes' principle was not known properly, and not one of the candidates had any knowledge of the very simple form of hydrometer mentioned in the question. In stating Boyle's law the necessity for keeping the temperature constant was often overlooked, and there was but one completely correct answer to Question 5 on the spring balance. As a rule, only the external features of the domestic variety were described; indeed, one colonial candidate said that the only spring balances he had ever seen were those used in butchers' shops. The answers to the questions on Heat were weak. It was disappointing to meet once again the bad old experiment of dropping hot balls of various metals into a cake of wax. This time it was brought out in order to demonstrate the difference in the thermal conductivities of the metals. Generally it pretends to show the difference in their thermal capacities; while all it really does is to confuse the student who thinks at all about his work. It should never be shown at all.

### Elementary Science.

**Preliminary.**—Most of the candidates possessed a creditable knowledge of at least one section of the subject. There seems to be some lack of practical work; for example, it was evident that few of the candidates had actually found the area of a circle by the "counting squares" method or the weighing method, and the lever had not been studied experimentally in a quantitative manner. The proper method of filling a thermometer was seldom described, and the reasons for the use of a small bore and bulb were quite unknown. The question on the description of a given solid substance received a few really excellent, well thought out answers. More stress might

with advantage be laid on simple observational work, especially in the Colonial schools.

### Chemistry.

**Senior.**—The written work, on the whole, was creditable. In some cases it was evident that work in the laboratory had not kept pace with instruction in theory; but many of the papers showed a practical knowledge of the experiments under discussion. The practical work was generally satisfactory.

**Junior.**—The work was generally satisfactory. Few of the candidates were acquainted with the elementary facts concerning the preparation of ammonia on the commercial scale. In Section B, most of the candidates appeared to realize the necessity of care in the use of a balance. The importance of the proper care of apparatus cannot be over emphasized. Some failed in attempting a detailed account of experiments they had carried out; for example, in the description of the determination of the loss of weight in heating chalk the essential details of manipulation were omitted. The practical work was fairly satisfactory.

### Drawing.

**Senior.**—As compared with recent previous examinations, there was a very perceptible increase in the proportion of really valueless papers, which may be due—at least, in part—to a neglect of the subject caused by War conditions. An average standard of attainment that shall express, even moderately, the truth about the appearance of a model-group can only be secured by steady practice as well as sound teaching; and there is no doubt a tendency to curtail the time available for drawing as the pupil reaches the higher stages of work; and this not infrequently just when experience is beginning to bear fruit. As has been noted in previous reports, the difficulty of representing surfaces as more or less horizontal seems to be decreasingly felt, but any real observance of perspective laws makes slow progress, and the treatment of circles shows lack of perception. A discreditable amount of ruling has to be recorded. In Memory Drawing, the smoothing plane proved something of a mystery, except to habitués of the workshop. There were only a few excellent renderings, but the great majority showed little or no understanding of the construction or use of a plane. On the other hand, a reasonable number displayed good observation of general proportions.

**Junior.**—All the comments on Senior Model Drawing apply to the Junior work; but the proportion of quite ignorant and futile efforts was still more marked. Memory Drawing was, on the whole, successfully done, though better observation of proportion should be sought for. Drawing from the Flat was hardly so well done as usual, largely owing to absence of proper "setting out" of main features, and consequent failure to get right relations between the parts. Some candidates, indeed, did surprisingly well, in view of their bad, blind methods. Real freedom of hand, too, is often not adequately taught—timid, scrappy, patchy line being far too prevalent.

**Preliminary.**—*Freehand from the Flat.* Speaking broadly, more attention than formerly seems to have been given to the proportions of the larger facts of the example, and also to the swing of the big curves; hence the number of papers earning marks well above the minimum for passing was definitely increased. There were, however, many candidates who drew individual curves well, but who neglected to consider the proportion of the structural forms; so the marks awarded in such cases were less than might easily have been earned.

**Model Drawing.**—Possibly the weakness which was noticeable in a number of the ellipses was to some extent owing to their large size, but this does not excuse the shapeless travesties which were in some cases presented. The lower ellipse was frequently made flatter than the upper one. Every student of Model Drawing should know and use the rule: "In a circular object, considered separately, the partly hidden ellipse is rounder than the one which is entirely visible." The apparent convergence of receding parallel lines was often well represented. All the drawings were made to an adequate scale.

**Lower Forms.**—The somewhat subtle form of the example (a stirrup) was well appreciated by a considerable majority of the candidates. Here and there proportion (though it was both obvious and simple) was not sufficiently studied. In the case of a symmetrical figure an axis is a *sine qua non*; but, for want of it, a number of drawings were either lop-sided or falling over. There was a satisfactory percentage of quite good drawings.

### Domestic Economy.

The results, as a whole, were very good, and indicated sound teaching and a genuine interest in the subject. The importance of a knowledge of Domestic Economy as an aid to national efficiency had evidently been impressed on the pupils by their teachers. More attention should be given to the methods of washing and drying woollen and flannel materials, and to the correct methods of making a cup of cocoa or a pot of tea.

Section III, Clause 4, of the By-Laws was amended so as to read thus:—

The Council is authorized to admit, without examination, to the grade of Fellow, *honoris causa*, such Members of the College and other persons as possess well-attested high classical or mathematical attainments, or are eminent as Teachers, or have obtained distinction in Science, Literature, or Art.

The CHAIRMAN, in moving the amendment of the By-Law on behalf of the Council, explained that the question of amending the By-Law in the way now proposed had arisen in connexion with an important movement for the promotion of an educational *entente* between England and the allied countries. The Council felt that some help might be given to that movement if they had the power to grant the Fellowship of the College to distinguished educationists in the allied countries.

The meeting concluded with a hearty vote of thanks to the Chairman for presiding.

## THE UPLANDS ASSOCIATION.

### STATEMENT OF PRINCIPLES ON PHYSICAL EDUCATION.

#### I. THE GENERAL PRINCIPLE.

During childhood (up to thirteen years of age) the child should manifest a purposeful, joyous activity in all his pursuits. His physical development is, therefore, just one aspect of an activity which absorbs his entire being, body and mind in unison. Growth of physical organs is a necessary accompaniment of such activity, but the healthy child is not specifically interested in this growth. Bodily growth demands a very large amount of movement, and this should be afforded by the variety of practical, æsthetic, and recreative pursuits to which his developing human nature responds.

This is the normal procedure; it implies that there should be large opportunities for work and play in the open air, and that school pursuits generally should involve much more activity than is commonly permitted at the present day.

Under subnormal conditions, such as *e.g.* prevail in the congested areas of large cities, or are found in children suffering from malformation, remedial measures may be approved to supplement (but not to replace) the wholesome activities of a rational healthy life. Only under such conditions can the massed movement of Swedish or other systems be countenanced. The principle applies in the same way to breathing exercises. This device, imposed for a few minutes at stated intervals day by day, may serve as a partial remedy against stunted development, when children are too much confined, and thus are prevented from inhaling fresh air with spontaneous vigour for an adequate time.

#### II. THE FUNCTION OF DRILL.

All collective or mass instruction can be called "drill" if the instructor aims to practise his class in some specific exercise. All such massed movements, as in rifle and bayonet drill in the Army, swimming or cricket drill in schools, are only serviceable as preliminary to real activities in which each performer must act for himself. In a similar way soldiers and sailors, like other adults, can appreciate the benefit of a gymnastic drill, which among children is only accepted as a physical relief from sitting at desks. Apart from such *realized* motives, drill is boredom to an intelligent mind and has neither psychological nor moral value; parades and marches, imposed in the belief that drill in itself is educative, have the contrary effect, and induce stupidity both in the teacher and the taught. The assumption that a *general* power of mental alertness is trained by inducing smart responses to specific commands is baseless. Drill, therefore, can only function as a particular type of class teaching, and it can only be sanctioned when a specific exercise is profitably learnt through precise directions which the whole of a class can follow at once.

#### III. DEVELOPMENT.

If development follows its normal course, the instinctive

desire for incessant movement during infancy is reinforced by habits which will lead the boy and girl, first, to cultivate active pursuits out of doors; secondly, to accept the more controlled movements which are provided on the one hand by ordered recreation in games, and on the other hand by industrial pursuits in workshop, garden, or house.

After fourteen years of age, and more frequently after eighteen years of age, many young people acquire a self-regarding interest in some form of physical development—*e.g.* in swimming, running, gymnastics; these, as well as competitive games, should be allowed their fair share of public support, in school as in parks and open spaces. At this period of life, however, each person can claim an increasing freedom of choice as between differing modes of exercise. The current practice of many secondary schools is to be deprecated, where interest is confined to a few conventional games and sports, especially when the desire to secure good "results" restricts participation to the more proficient.

Under normal conditions the habits formed in healthy childhood will lead the adolescent to keep himself physically fit, and therefore to take an appropriate part in games or the like; whatever control is exercised over youth of both sexes, whether in schools, workshop, or offices, this control should not debar them from opportunity to attain normal physical development at maturity.

Further investigation is needed in detailed scientific examination at each of these stages of development to determine the type of gymnastics or games congenial to the powers and tastes of those upon whom they are imposed.

#### IV. MUSIC IN RELATION TO BODILY EXERCISE.

A. Where large numbers of children move quickly from place to place, they will find pleasure (as do adults also) in keeping step with the accent of song or musical instrument. Any other form of musical drill (see II above) has no meaning, and therefore no educational value.

B. Every normal child is stimulated to make spontaneous rhythmical movements of the limbs in correspondence with the rhythm of music. The teacher of music can therefore help the child to a conscious appreciation of rhythm, identifying the rhythms of music with the rhythms of movement, and can thereupon offer him a technique, such as that invented by Dalcroze. Such an enlargement of musical experience promotes also the grace and vigour of the body; along with singing games and folk-dancing, it should hold a prominent place in the activities of childhood.

Conventional dancing can only be sanctioned at a later period, when young people are sufficiently developed to share the new social interests of sex to which dancing responds.

At every stage the value of such pursuits in respect of physical education should be recognized, especially if attention is paid to fresh air and hygienic dress; but the æsthetic and moral value of "good" music and of "good" dancing are even more important, since the influence of bad art is disastrous.

Since music has a social purpose, all these forms of expressing rhythm should be associated with festival, drama, and other social functions (supplying to the school community and its circle a congenial field for the expression of delight in every form of fine art).

#### V. PHYSICAL TRAINING AND PHYSIOLOGY.

Little importance can be attached during childhood to the acquiring of information about the functions of bodily organs, since normal human beings form right habits at an early age, induced by authority and by suggestion rather than by research and reason. In later adolescence, physiology, as a branch of biology, affords explanations for which minds, informed by full contact with the natural world at earlier stages, are quite ready; but at this period also all that is required for normal development can be conveyed by brief empirical information. The will is not strengthened by focusing the attention on scientific aspects either of digestion, of circulation, of nerve and brain processes, or of sex.

January 1917.

## REVIEWS.

*Hindu Mind Training.* By an Anglo-Saxon Mother.  
(10s. 6d. net. Longmans.)

The writer of this book proclaims herself a disciple of Mr. S. M. Mitra, who is a medical man and the author of several works on Indian subjects. He supplies an eighty-page Introduction and a concluding chapter, and the intelligent reader will have little difficulty in making up his mind that Mr. Mitra has had more to do with the text than had the Anglo-Saxon Mother. The book provides a wholesome tonic for us Occidentals who are a little proud of our western civilization. Some of us have resented the continual reference of all our ideas back to Plato and Aristotle: but those worthy philosophers are now in turn treated as comparatively modern thinkers who have borrowed all they possess from the thinking of Mr. Mitra's ancestors of thirty centuries ago. All our philosophical and educational ideas from Aristotle to Freud, from Pythagoras to Montessori, were *vieux jeu* to the Hindus of thirty centuries ago. From them we might have borrowed the notion of unconscious cerebration thirty centuries since, instead of reluctantly accepting it a few decades ago. To tell the truth, this ever recurring chorus of "thirty centuries ago" becomes more than tiresome in the book, and we feel that the necessary amount of humility might have been instilled into us with less reiteration. Some of us may resent being told that "the idea of evolution had been discussed at length by the Hindu over thirty centuries before the birth of Darwin or Spencer, and what was a mighty 'discovery' in the eyes of Europe was no novelty to those conversant with the teachings of Hindu India." The trouble is that Mr. Mitra does not ask us to take his bare word for it. He cites the Sanskrit Scholar Sir Monier Williams: "the Hindus were Spinozites more than two thousand years before the existence of Spinoza, and Darwinians many centuries before Darwin, and evolutionists many centuries before the doctrine of Evolution had been accepted by the scientists of our time."

In any case, Mr. Mitra gives evidence of a wide knowledge of western educational and philosophical literature. It is when we come to the actual scheme of Hindu mind training that we begin to think of the Latin tag about mountains and mice. For the result of thirty centuries of cogitation is nothing more than a scheme of training the mind by a series of fairy-tale fables manipulated during their presentation by a carefully arranged series of questions, to which the pupils give answers that form an exercise in purposive thinking. Out of the 536 pages some 420 are given up to these improving tales, with the appropriate questions and typical answers. Among those grown-up persons who have supplied the answers Mr. Mitra mentions with perhaps justifiable pride that there "are graduates of Cambridge and Oxford, two peeresses, doctors of both sexes, and a leading suffragist." With such contributors it is only to be expected that the comments and answers are quite interesting. The stories, too, are not without attraction. But we cannot find any trace of systematic training; though it has to be admitted that almost every aspect of human experience is touched upon somewhere or other in the volume. We should be inclined to criticize the psychological soundness of this glorification of edited story-telling as a complete educational system had we not been told that "psychology has scarcely been studied long enough in the West to justify the dogmatism in which some writers indulge." This warning prevents us from commenting upon the remarkable statement that the dates at which the answers were written had to be carefully noted "to see how the influence of the waxing or waning moon on certain temperaments guided the choice of questions." Much might be said about a statement like that, but we have learnt something by a careful reading of this long book, and hope to be included among the favoured ones referred to in the following passage from which we have extracted genuine consolation:—"A careful perusal of this volume would no doubt in most cases eradicate the germs of fanaticism, and make its students rational beings, capable of proper self-expression as well as necessary self-repression." We accept this word to the wise, and repress ourselves.

*The Permanent Values in Education.* By Kenneth Richmond.  
(2s. 6d. net. Constable.)

It is generally a mistake for a capable writer to get another person to write an Introduction for him. Mr. Richmond stands in no need of a supporter, but he has been fortunate enough to secure from Mr. Clutton-Brock an introduction that contains an idea. The elimination of the notion of *status* from education deserves attention. The public will have gained something if it can assimilate the truth underlying the epigram: "One of the first aims of education should be to remove all pride in it." Coming to the book itself, we find that Mr. Richmond's purpose is to supply teachers with "*hors d'œuvre* for the neglected feast of educational history." He believes that the past has serious lessons for to-day, and that at present these lessons are not sufficiently impressed upon teachers. The book is "roughly historical," but its author feels constrained to add that "personal conclusions, personal attempts at a revaluation of old ideas in terms of new conditions are put forward." This is too modest a statement; the book is mainly a revaluation of old ideals, and contains far more of Mr. Richmond than of any of the educationists that he criticizes. It is just here that the present volume differs from Mr. R. H. Quick's (not "R. B." as Mr. Richmond has it on page 27) "Educational Reformers."

The older book supplies the materials on which criticisms are made. Mr. Quick describes what Mr. Richmond takes for granted. Accordingly this book is of less value to the reader who comes to it without previous reading in educational history. It should be read by the student who has already gone through a course. The tired teacher referred to in the preface can benefit by this book only if he has already mastered the broad outlines of educational history. One cannot put into the 134 pages of this little book what demands 759 pages in Monroe's "Text-Book." But when one has read Monroe one may come to Mr. Richmond for help in understanding the meaning of what one has read. In this respect the book is admirable. Its author displays marvellous ingenuity in discovering or inventing—it is not always easy to say which—underlying currents of thought and influence that throw a grateful light in dark places. Even the most *blasé* exponent of educational history will be compelled to admit that many familiar and vague generalizations become here fresh and clear cut. Mr. Richmond has a quite exceptional gift of seeing into the inwardness of things, and suggesting new and illuminating points of view. The book is provocative, but in the best sense of that word. It stimulates thought without alienating sympathy.

The epigrammatic style will confuse the more matter-of-fact readers: we wonder, for example, how many will get to the bottom of the sentence, "Froebel's recognition of the issues involved was far-reaching enough to have been widely neglected." But almost every epigram in the book is worth the trouble it involves. What could be better than the Herbartian escape from difficulty "by reducing will to its simplest terms, and calling it interest," or "the conflict in the mind of man between everything and everything else," or "education is not a hypnotic process"? The fact that much of the material has lately appeared in the periodical press guarantees its freshness and its applicability to the present educational crisis where such guidance as Mr. Richmond's is urgently needed.

*German and English Education.* By Fr. de Hovre.  
(2s. 6d. net. Constable.)

Dr. de Hovre is a Professor of Education at Louvain who has spent some of his time of exile among us in writing this comparative study. Little cause as he has to love the Germans, he is scrupulously just to them, and even generous in proclaiming their good points. We may therefore, perhaps, accept with less doubt than we otherwise would the favourable opinion he expresses on the English soul and on English education. In the contrast he makes Germany stand for *Kultur* and England for Civilization. The difference between them is broadly: *Kultur* stands for the selfishly national, the intellectual, the State; while Civilization stands for internationalism, the moral, the individual personality. Passing from a study of the German soul to an examination of German edu-

cation, Dr. de Hovre has many enlightening remarks to make. He tells us, for example, that from the purely individualistic English point of view the "school exists merely because it is impossible to provide each pupil with a private teacher." We are startled to be told that all individualistic conceptions are, at bottom, utilitarian and mean; but we are cheered to find that, "raised to the national standpoint, they are brought again into the light of sound idealism." In illustration of the close connexion between education and political life in Germany we are reminded that "at the national Congresses which preceded the Unification of Germany (1846, 1848, &c.) the great majority of the members were men of the teaching profession."

It is a very pleasant change from our usual self-depreciation to turn to the views of a keen and capable outsider. One thing that strikes Dr. de Hovre is that in English we have no term for intellectual education as such. The one term, "education," has to do duty for the double processes of intellectual and moral training. Our critic is too polite to say, what most of our intelligent educationists now realize, that we must let the intellect count for more in our system. He confines himself to the statement that "social life is the high school of English education." It is a neat way of putting the difference between us and our enemies to say that German education sets out to make Germans, English education to make men. It is refreshing to have it on continental authority that before the War there was already a predisposition in most countries on the continent in favour of the distinctively English form of education. Most encouraging of all is Dr. de Hovre's conclusion that while we are weak where Germany is strong, and *vice versa*, "the great fact must not be overlooked that the strength of English education lies in its fundamental principles and its weakness in its superstructure, whereas the opposite is the case with Germany." Since we are thus sound in our vital organs we have every chance of a rapid recovery from our present educational indisposition. Hence our author can give us the comforting assurance: "For England, to remedy intellectual backwardness will only require a short period compared with the time it will take Germany to recover from her moral atrophy."

The style shows occasional traces of the difficulties of writing in a foreign language, but is on the whole remarkably clear and effective.

*Professionalism and Originality.* By F. H. Hayward.  
(6s. net. Allen & Unwin.)

Dr. Hayward, with his usual vigour, draws a sharp line of demarcation between the original man and the professional man. His previous study of educational administration had convinced him that teachers and officials rather tend to degenerate because of their professional environment, and a further study of professionalism in itself has not weakened his conviction. He does not now confine himself to teachers—all professional people are included in the same condemnation. His book reads rather like an attack upon human nature, but he is careful to assure us that his real object is to demonstrate the temptations to which we are all exposed through the power of the conventional. The general impression conveyed by the book is that competition, in whatever form, leads to the evils that he attributes to professionalism. This view is distinctly set forth on page 31, and, indeed, has all the emphasis that underlining can give. "When a profession, as is usual, has grades of its own, these grades compete against each other for power, privileges, and emoluments." How does this differ from the root principle laid down by Hobbes? The profession is really only a limited field in which the general principle is applied. It may be true, as Shaw tells us, that "professions are conspiracies against the laity," but within them we have the same laws as are exemplified in the struggle between the professions and the society against which they conspire. All the same there is value in the study of the special conditions under which these laws operate in the professions, and this study has been dramatically made by Dr. Hayward. His results are thoroughly discouraging, and it is only when we get to the second part of his book that our spirits begin to rise.

Dr. Hayward writes as if he had a brief for what he calls "the living man," that is the original, creative person, the

"real live man" of the Americans, the "genius" of the more conventional textbooks. It is difficult to avoid the conviction that there is, underlying the treatment of the living man, an application to the author's own case. Whether this be so or not, it is clear that Dr. Hayward's sympathies are entirely on the side of the living man as compared with the professional, for he is at pains to make it evident that "professional men are mostly just ordinary mediocre people." Whatever else he is, Dr. Hayward does not belong to this class. He is at his best when attacking the meannesses and trickery of the professions, and in suggesting more or less practicable schemes for the improvement of professional organization.

The book is written in the most courageous spirit, and is free from rancour, however severe the criticisms it contains. Its main defect is a lack of co-ordination between the two parts. The antithesis of the living man is not the professional, but the dull, mediocre person. It is true that the book tries to show that professional people belong to this class; but, after all, the two classes—the professionals and the mediocres—do not quite coincide. What we want is an analysis of the nature of professionalism as such, and an examination of the way in which it produces the results that this book describes.

*The Cambridge History of English Literature.* Vols. XIII and XIV. (9s. net each. Cambridge University Press.)

These two volumes complete a very notable work, carefully planned, executed with ripe judgment by numerous scholarly writers, and forming an instructive guide and interesting companion to serious students of English literature. The importance of the nineteenth century production is emphasized by the devotion of the last three volumes of the fourteen to what, after all, is felt to be only a comprehensive general sketch. There is no need to consider this final instalment in detail: the principal authors usually have their separate chapters, the minor authors their groups, and the running commentary usually furnishes a suggestive appreciation from at least one instructed point of view. Yet one or two articles deserve special notice. Sir Henry Jones gives the flower of his profound study of the Brownings in fresh and attractive form. He does much to explain, if not to reconcile us to, Browning's characteristic qualities; he cannot freshen the fading tints of Mrs. Browning's laurels. The mere fact of his admitting the question whether Browning was dramatic decides the question against his own conclusion; or, perhaps, we may say that, while Browning had dramatic elements, he could produce a drama dramatic only in form. The marvel is that experienced actors should have even attempted to present Browning's plays on the stage. It was not the defection of an actor that killed "Strafford": it was sheer lack of dramatic vitality. Prof. Saintsbury surpasses himself in his elaborate analysis of Dickens—a triumph of critical insight and handling. After all, as Prof. Saintsbury admits, Dickens did well to go his own way; even if he had had all his present critic's comments before him he could not well have improved matters; you must take the defects with the achievement. This article inevitably suggests wide considerations about criticism generally. The standpoint of knowledge of the text is an always necessary standpoint; but the standpoints of author and audience require also to be considered, and Prof. Saintsbury does not ignore this. Perhaps some readers will be startled to find Bulwer Lytton in a group of "Lesser Novelists," especially after finding certain other novelists outside that group, though the place of these may have been determined by their affinity to some other set, say, "Political and Social Novelists." "The age must be rich indeed which can afford to consider the author of 'The Cloister and the Hearth' a minor novelist," says the writer; and some will say the same for the author of "The Last Days of Pompeii." The same writer gives very scant measure to George Macdonald and William Black. The final volume consists mainly of very able and instructive summaries of the progress of various departments—philosophy, history and biography, journalism, sport, travel, science, education, and literature in the Dominions and India. Special attention should be drawn to Prof. Adamson's careful article on education. The final article, on "Changes in the Language since Shakespeare's time," might well form the basis of a developed treatise of wider scope.

*An English Pronouncing Dictionary.* On strictly Phonetic Principles. By Daniel Jones. (6s. net. Dent.)

This publication is one of the many signs that spoken language is being rehabilitated. Just as in biology until recently man has been considered as a piece of mechanism apart and complete, so in language the word has been treated as a dead thing to be studied as history. The new biology tells us that man cannot be fully studied apart from the external world upon which he impresses himself; the new language study insists that the word is a living thing, and must be considered in its vocal use. The word is, indeed, a living thing, and therefore changes constantly. Mr. Jones has fixed it for a moment in its career and at a point in its spreading life. He takes the public-school pronunciation for much the same reason that Prof. Viëtor took the stage as his standard. In Germany actors need to be intelligible in various parts of the country, among various dialects. They tend, therefore, to a uniform speech. The public-school pronunciation is a widely accepted standard amongst educated people in England.

Mr. Jones is careful to limit himself to actual facts; his task has been to record the pronunciation of the public schools as he hears it, without saying that it is good or bad, without claiming that it forms a standard. If he finds two common pronunciations, as in "laboratory," he records them both without comment. He takes the more careful speakers as his guide, we may presume. We have not found, for instance, any case of omitted *g* in the ending *-ing*. He gives the *t* in "Latin" as definitely heard. Of course, there are many pronunciations even among the public-school class. Apart from special words that may vary according to the taste of the speaker, there is a general difference of intonation and stress between the careful speaker, the pedantic school-master, the teacher of elocution, and the careless speaker.

It is useless to try to record all these variations. Mr. Jones, with unremitting labour, has given us a pronouncing dictionary of nearly fifty thousand words, which will be of very great interest to English students of their own language and of first-rate value to foreigners of all nationalities who are familiar with phonetic symbols. "Monumental" is the reviewer's favourite word for a work that has involved so much continued industry. Among those interested discussion will naturally arise as to Mr. Jones's accuracy. He puts down what he hears as an artist paints what he sees. Other ears, other sounds. But few people take the trouble to consider how they pronounce—witness the word "zoological."

*Generalized Coordinates.* By William Elwood Byerly. (Boston, &c.: 5s. 6d. Ginn.)

This valuable little treatise on the subject of generalized coordinates as employed in connexion with the sciences of mechanics and physics was originally inspired by Prof. B. O. Peirce, whose untimely death prevented his contributing the substantial help which he had contemplated giving towards its production. The chief part in the task of preparation had, however, been assigned to Prof. Byerly, and in his very able hands the work has been carried through to its completion.

He takes the Cartesian system of coordinates as the basis of his discussion, and shows how, by means of suitably framed equations and methods of transformation, we may place at our disposal a practically indefinitely large number of systems of reference, and so enable ourselves to adopt for any particular problem that one of them which is best adapted to our needs.

Equations of a perfectly general type are discussed as well as the special and more familiar systems which are ordinarily employed. Illustrative examples are fully treated, and problems are proposed for the reader's consideration. Various deeply interesting topics which are met with in mechanics—for example, Hamilton's equations and portions of the theory of impulsive and conservative forces—claim the author's attention; and, further, the application of his subject to physical problems has been made abundantly evident by him. The nature of the matter constituting the contents of the volume is full of interest, and the manner in which the details are set forth will appeal to its readers.

*The Days of Alkibiades.* By C. E. Robinson. Foreword by Prof. Oman. (5s. net. E. Arnold.)

Mr. Robinson's aim is to give the reader a series of pictures of life in Greece as it was lived in classical times. To give a certain unity to the volume the sketches centre round Alkibiades and his times. An idea of the scope of the work may be given by the titles of the chapters, which include Life on a Farm, Battles at Sea and on Land, Delphi, Eleusis, Olympia, a dinner party, a Funeral, and a Wedding. Mr. Robinson takes what he can learn from historians and playwrights about life and manners, and where there are gaps in knowledge supplies it boldly. The result is neither history nor fiction as generally understood, but an eminently readable book which portrays life in Greece in a convincing and interesting manner. History need no longer be dull when it is illumined by such studies as the book before us. The illustrations are numerous and full of interest, as they really illustrate and elucidate the text. They are based on what authority is to be found, but the author admits that, where authority is wanting, surmise has had its way. One criticism only may be made—the figures are nearly always wanting in grace and comeliness.

*The Old Grammar Schools.* By Foster Watson. (1s. 3d. net. Cambridge University Press.)

It is pleasant to find in this popular series a volume on the old grammar schools contributed by so high an authority as Dr. Watson. Information is not readily accessible to the ordinary reader who wants to know something about these interesting and important national institutions, and few indeed are so well qualified to give information on this subject as is the author of this volume. It runs to a hundred and fifty pages, and is divided into ten chapters. After tracing carefully the origin and early history of the schools, paying due attention to the work of the great warrior prelates and the public-spirited Tudor merchants, Dr. Watson examines the relations between the Church and the schools, and then goes on to a most interesting and instructive account of their curricula and internal life. This is perhaps the most attractive part of the book, though many readers will, at the present time, value still more the admirable account of the decadence of the grammar schools especially in relation to the rise of what are usually called the great public schools. The book appears at a most opportune time, and should help to spread that sound knowledge of our educational past that is so necessary to a wise policy for the educational future. We hope it will be widely read.

*Science and Education.* (1s. net. Heinemann.)

This is a reprint of a volume published in 1855, containing seven lectures delivered at the Royal Institution of Great Britain in 1854 by seven of the most distinguished men of science of that period—Whewell, Faraday, Latham, Daubeny, Tyndall, Paget, and Hodgson. It is a happy idea to present this material again at a time when the interest in scientific instruction is specially keen. One is not surprised at the zest with which Sir Ray Lankester writes an introduction to a volume that glorifies science teaching and attacks by implication "the old-established and curious 'classical curriculum' which it must eventually completely replace." He is himself specially interested in the lecture by Faraday entitled "Observations on Mental Education," and would have been content to have had that lecture republished by itself, but he naturally welcomed Mr. Heinemann's proposal to reprint the whole series of seven. Very brief biographies of the various lecturers are supplied, and Sir Ray gives some useful notes on Faraday's lecture. It is striking how modern the lectures read in spite of the advance science has made in the interval between 1854 and to-day. The arguments are as cogent as ever, and the publisher and editor have deserved well of the country by producing the book.

*Teaching High School Latin.* By Josiah B. Game. (4s. net. Cambridge University Press.)

It can hardly be said that this volume fully justifies its claim to be "an actual working manual fitted to the needs of high-school instructors." Too many of its 123 pages are

given up to a general defence of the place of Latin in the schools. But, when Prof. Game does settle down to his subject, he treats it in a fresh and stimulating way. He deals with each of the four years' study of Latin and has a great many useful and striking things to say about classroom equipment, textbooks, and general reading material in Latin. He does not give sufficient attention to Latin prose as judged by the standard adopted in England. Indeed, the English teacher of Latin will be a little at a loss in presence of the novel points of view adopted in the volume; but perhaps we are none the worse for getting stirred up a little and driven out of our ruts. Probably for English teachers it is not necessary to elaborate, as Prof. Game does, the thesis "Latin teachers must know Latin"; but from his other theses we English teachers may learn much. We welcome this addition to the literature of specialist instruction.

*The Nation's Health.* The Stamping out of Venereal Disease.

By Sir Malcolm Morris. (3s. 6d. net. Cassell.)

Few people have the time or the patience necessary to read the report of a Royal Commission. It is for the larger number that Sir Malcolm Morris has written this book. In a comparatively brief space, and in clear, non-technical language, he gives the main points of the Commission's report. He writes in pursuance of a policy of "candid, but not unrestrained, discussion." Only recently, and largely as a result of Brioux's play, "Les Avariés," which has been translated under the title of "Damaged Goods," has the seriousness of the evil been known outside the medical profession. This knowledge is one step in the campaign against the disease, and the knowledge should be possessed by every intelligent person. This book is specially intended for members of Boards that deal with matters of health and for (to quote the preface) "head masters and head mistresses." For such responsible readers we have no hesitation in advising strongly the study of the book.

*Shrewsbury Fables.* Being Addresses given in Shrewsbury School Chapel. By Cyril Alington. (2s. net. Longmans.)

To give these fables their full value one needs the voice of the present Head Master of Eton and the chapel of Shrewsbury School in which they were delivered. The personality of the trusted and understanding Head Master and the circumstances, full of solemnity and joyous hope, under which the addresses were given, add greatly to their effect. Confirmation and the end of the Summer Term are seasons alike when some of the boys were led to think seriously of themselves and their future. It was on these occasions that the addresses were given. Mr. Alington wrote them to deliver: he did not write for the printer. Nevertheless they make good reading, and might with good effect be read aloud to other boys. They are, as fables should be, based on simple facts or objects well known to the boys, and each contains fine thoughts that can well be grasped and retained.

OVERSEAS.

The statistician of the Metropolitan Life Insurance Company of New York has made an investigation of the physical disability of the New York city teachers. He credits teachers with a longevity next to that of clergymen. He finds that of the 20,421 teachers employed during the year 1914-15, no less than 18.7 per cent. were reported sick during the school year of 41 weeks. Among the men there were 88.5 cases of physical disability per thousand, and among the women 201.5 per thousand. "In relation to the number employed there were, therefore, 228 cases of illness among women for each 100 cases registered among men." With regard to the length of time individual teachers were absent, whether from illness or with leave of absence, the average duration was for men 1.34 days per teacher, and for women 3.11 days per teacher. The Boston magazine, *Education*, commenting on these figures, says: "It is a pertinent (we trust not an impertinent) query arising out of the study of these statistics, whether or not they have a bearing upon the question of equal salaries for men and women teachers, which latter question has often been vigorously discussed in the pages of *Education*."

It appears that a law has been passed in Ohio called the Danford Law, that is described in the *Ohio Teacher* as "A Disgrace to the Profession." It provides that a person who has never had any high-school education may be granted a certificate to teach for one year. Such a teacher is not required to have had any normal training, but after he has taught one year, the State will require him to have at least one year of high-school education, and also the amount of normal training that is required of other teachers. In other words, an eighteen-year-old boy or girl may be given thirty or forty children to practise upon for a year, and then must be ejected by the State as inefficient till he has gone through a regular course. One does not wonder that the *Ohio Teacher* says that: "The operations of the Danford Law are so plainly iniquitous that it can hardly find a defender anywhere. It could not be otherwise. The strangest thing about it is that such a measure could be enacted."

In Chicago there are two educational journals. *The School Review* represents the secondary side, and the *Elementary School Journal* the elementary. It is a sign of the times that the two journals, feeling in an increasing degree that there is an overlapping of interests, have agreed to come more into line with one another. They both appear monthly, and they have now arranged to make their editorials and their news notes supplement each other, and, by appearing the one at the beginning of the month and the other at the middle, contrive to gain the advantages of a fortnightly issue. Naturally each will have a certain bias towards its original field as elementary or secondary, but the co-operation is a most favourable indication of the growing solidarity of education in the States.

It is surely a sinister sign of the times when a teacher's magazine can devote an article to the discussion of the blunt question: "Why the Teacher?" Has it come to an open question whether there should be teachers or not? But the article gradually thins down to much the same sort of argument as we find in our home journals. "When we pay the teachers as they should be paid, and when we cease overcrowding the schools with so many children that proper attention to the individual child is impossible, then, and we fear not till then, can we 'put it up to' the schools that it is their fault and theirs alone, if our child fails of promotion at the end of the year." Obviously our problems are very like those that face our colleagues on the other side of the Atlantic.

A great deal of attention is being given at present in the United States to what is called "directed reading." In 1915 the teachers of Wisconsin formed the "Wisconsin Teachers' and Young People's Reading Circle." The plan it suggests is that all pupils of school age beyond the second grade, whether in school or not, are to be given credit for reading. One year of prescribed reading is to entitle to a diploma, and every successive year of reading entitles to an additional seal on the diploma. It is interesting to note that the Education Bureau at Washington is taking its part in encouraging home reading and has published some monographs on the kinds of books to be recommended for young people. There is, however, a certain danger in this guiding of the young people's reading. Grown-ups are very apt to recommend things that the young folk ought to enjoy, rather than what they really do enjoy. This is suggested in the "Reading for Pleasure and Profit" published by the Free Public Library of Newark, N.J. It is described as "a list of certain books which young people find entertaining, being chiefly books which older readers enjoyed when they were young." We hope that the youngsters will justify the oldsters' expectations, but we who are no longer young must be prepared for a change in taste, and must not push our antiquated preferences too vigorously.

*School and Society* for March 3 contains a melancholy chart showing three increases since 1908 (1) of average salary of Harvard professors, (2) of cost of commodities, (3) of wages at large. The second curve meanders gently till the end of 1915, when it takes to itself wings and soars practically out of sight of the third curve which up till then made a decent show of keeping up with it. As for curve number one, it drags its slow length along at the foot of the chart showing hardly any deviation from the plain horizontal. There is room for a similar chart on this side drawn up at the address of our secondary and our elementary teachers.

## GENERAL NOTICES.

## LATIN.

*Caesar in Britain: Gallic War.* Books IV and V. Edited by T. Rice Holmes. With Map, Illustrations, and Vocabulary. (1s. 6d. Clarendon Press.)

This edition for school use is based upon Dr. Rice Holmes's larger edition, published in 1914. The book contains an epitome of preceding commentaries, very full notes, vocabulary, a detailed map, and several illustrations.

## GREEK.

*A Greek Reader for Schools.* Edited, with Introduction, Notes, and Vocabulary, by C. E. Freeman and W. D. Lowe. (2s. 6d. Clarendon Press.)

Mr. Lowe had collected the material for a reader which should make Greek literature possible for boys with a fair knowledge of elementary grammar, when his military duties prevented the completion of the book. Mr. Freeman undertook the final form and arrangement. The passages are from Aesop, Theophrastus, Lucian, Herodotus, Thucydides, Xenophon, and Plato. There are notes designed to explain the difficulties that could not easily be removed from the text, and each author is prefaced by an explanatory note. The type is clear and well spaced.

## FRENCH.

*Gringoire.* Comédie en un Acte en Prose. Par Théodore de Banville. Edited by A. Wilson-Green. (2s. 6d. Cambridge University Press.)

Schoolboys are (at any rate outwardly) indifferent to the appearance of their schoolbooks; but subconsciously they must experience a satisfaction in handling a production such as this. The binding pleases the eye, the type is clear-cut and stands out well on a pleasant paper. The play will interest elder boys and girls. It portrays Louis XI in his twofold character—the amiable friend and the unscrupulous politician. Gringoire himself is a creation of genius. The editing is careful and exhaustive; but for senior pupils, who should know how to use a dictionary, the vocabulary is superfluous.

*Les Quatre Évangiles et les Actes des Apôtres.* Avec Notes Explicatives. Illustrations de Harold Copping. Version Synodale de la Société Biblique de France. (1s. net. Religious Tract Society.)

The text, printed in double column, is clear and of a readable size, and is arranged in paragraphs, the verses being indicated by small interlinear figures. The notes, at the foot of the page, are mainly doctrinal. The illustrations, in colour, will evoke varied opinions. They may be characterized as well drawn and illustrative of the text; on the other hand, it may be felt that nothing short of genius can represent adequately the solemn incidents of the Gospels.

*Aide-Mémoire of Everyday French Words and Phrases.*

By Basil Readman. (3s. net. Blackie.)

Mr. Readman is quite right when he points out in his preface that the possession of a vocabulary is essential in mastering a language. Grammar forms and syntax may be known to perfection, but if the words are wanting neither speaking, reading, or writing is easy. The vocabularies here given begin with short lists of words classified according to meaning—military terms, naval terms, sport, and so on; phrases arranged in the same manner follow. This *Aide-Mémoire* is a sizable volume printed on good writing paper. The French words are well spaced, so that they are the more easy to learn. Opposite each list is a blank page, on which further words can be written; in addition there are blank pages at the end, forming a voluminous notebook. For boys of sixteen who want to make progress in French, and who will take trouble, the book might prove very useful. It is written quite frankly on time-honoured lines; for example, we find *le lion rugit, le chien aboie, le cheval hennit* each translated fully into English; and there are lists of words such as *le poêle, la poêle, le vase, la vase*. English equivalents are sometimes best left vague: "hope to meet again" gives no real idea of the use of *à tantôt*. As much may be said of many translations in this book.

"Siepmann's French Series for Rapid Reading."—(1) *La Reine des Neiges* (Alexandre Dumas); (2) *Le Tour de France* (Frédéric Soulié); (3) *Un Secret de Médecin* (Emile Souvestre). (Each 6d. Macmillan.)

A pleasant series of interesting readers. About thirty-five pages of text, a brief notice of the author, a vocabulary of the less common words arranged by pages, and the minimum of necessary notes. The volumes before us belong to the elementary section; they are well chosen to maintain the interest of the pupils in the story.

(Continued on page 74.)

## A. & C. BLACK'S FIRST (REFORM) FRENCH COURSE

Edited by

F. B. KIRKMAN, B.A. Oxon.

A New Book for Beginners in French.

### PETIT COURS PRÉPARATOIRE.

By L. H. ALTHAUS, Organizing Mistress in Modern Languages to the West Riding Education Committee. A two-term course in phonetic transcript leading up to *La Première Année*. May be used independently. Containing Frontispiece in colours, several black-and-white illustrations and line drawing in the text. Price 1s. 6d.

Chief features:—(1) Systematic and thorough training in the production of French sounds; (2) Vocabulary built up on the sounds as taught; (3) Intonation Exercises; (4) all the lessons have been practically tested in various classrooms during the last four to five years; (5) LESSON NOTES (*supplied gratis*) provide all the information necessary for the teacher; (6) if followed by the Phonetic Edition of *LA PREMIÈRE ANNÉE* (1ère Partie), a full year's course in phonetic transcript is secured.

*La Première Année*, with Coloured Plates.

### LA PREMIÈRE ANNÉE DE FRANÇAIS

By F. B. KIRKMAN, B.A. A Day passed by an English Boy in Paris. Sixty-three illustrations, of which four are in colour. Eighth Edition. Price 2s.

New features:—(1) Four Coloured Plates—(i) Un Cocher Parisien, (ii) Le Charmeur d'Oiseaux, (iii) Les Champs Elysées, (iv) La Seine; (2) A prefatory note containing suggestions as to the best way of using the book so as to obtain the best results.

### LA PREMIÈRE ANNÉE DE FRANÇAIS.

Première Partie (Phonetic Edition).

Third Edition, Revised, and with the liaison of words indicated. Transcribed by Prof. D. L. SAVORY, M.A. Illustrated. With Teachers' Lesson Notes (*gratis*) by L. VON GLEHN. Price 6d.

### SOIRÉES CHEZ LES PASCAL.

By F. B. KIRKMAN, B.A. A First Reading Book. Evenings with the Fairies. Five Coloured Plates. Second Edition, completely Revised. Price 6d.

### FIRST FRENCH SONG BOOK.

By R. B. MORGAN, B.Litt. Thirty-seven Songs, of which ten are in Phonetic Script. Airs and Tonic Sol-fa. Second Edition. Price 6d.

### COLOURED WALL PICTURES

to accompany *La Première Année de Français*. No. 1.—*La Famille Pascal à Table*; No. 2.—*La Porte Saint-Martin à Paris*; a Street Scene. Both drawn from French Models and Photographs. Measurements: 45 by 35 in. Prices: on linen, with rollers, varnished, 7s. 6d. net each; on linen, unvarnished, 5s. net each; unmounted, 3s. net each. Write for post card (reproductions in colour facsimile).

All Lesson Notes for Teachers separate and gratis. A complete list of texts, with recommended courses, will be sent on application to the Publishers.

Published by A. & C. BLACK, Ltd.,  
4, 5, & 6 Soho Square, London, W. 1.

*A First French Prose Composition. Based on Conversation and Imitation.* By F. W. Wilson and C. A. Jaccard. (1s. 6d. net. Bell.)

There are sixty pieces of English in the first Part of the book, beginning with quite simple stories. Each piece has foot-notes, grammar questions, and conversational sentences in English based on the story. Part II contains conversational questions in French and lists of French words, each piece in Part II being based on the corresponding piece in Part I.

*Quatre Comédies.* Par Alfred de Musset. *Les Caprices de Marianne; Barberine; On ne savait penser à tout; Bettine.* Edited, with Introduction and Notes, by Raymond Weeks. (3s. 6d. net. Milford.)

The introduction gives an account of Musset's life and work, and occupies about eight pages. Very brief notes at the end occupy four pages. The whole of the rest—nearly 300 pages—consists of the four plays in good clear type and well spaced.

"Harrap's Shorter French Texts."—*Le Château de la Misère.* Extrait du *Capitaine Fracasse.* Par Théophile Gautier. Edited by H. Adolphe Gérard. (1s. net.)

A brief introduction gives an account of Gautier and of "*Le Capitaine Fracasse.*" The text occupies 50 pages. There are notes, exercises for retranslation, and a vocabulary.

*Black's First German Book: Phonetic Transcription of the First Thirty Lessons.* By L. H. Althaus. (1s. 6d. Black; also Teacher's Notes, 1s. 6d.)

Miss Althaus is an indefatigable worker in the cause of clear speaking, a cause that still requires much continued effort on the part of its advocates. More teachers every year realize that the clear analysis of sounds can be helped greatly by the use of symbols. The German language offers a good opportunity for the scientific study of sounds for two reasons: usually a beginner's class in German consists of pupils who have no previous knowledge of the language and who consequently start with a fair field for the teacher's work, and, secondly, they are, as a rule, old enough to understand the teaching. In French it is rare for the teacher in a secondary school to be able to make a fair start. The children have generally learnt a "little French" before, and errors of pronunciation already acquired have to be corrected. Until the teacher of the mother tongue in its earliest stages is convinced of the value of clear enunciation, it will be left to the teacher of modern languages to give the instruction that will enable the pupil to train his vocal organs.

#### RUSSIAN.

*A School Russian Grammar.* By E. G. Underwood. (2s. 6d. net. Blackie.)

Contains the minimum amount of grammar that it is necessary to know in order to read, write, or speak simple Russian, and is planned either for school use or for the general beginner.

*A Progressive Russian Course.* By P. M. Smirnoff. (2s. 6d. net. Blackie.)

Aims at producing a practical and simple course for beginners. Each lesson contains Russian conversation translated into English, vocabulary, an extract for reading, and sentences for translation into Russian.

#### SPANISH.

*A Practical Spanish Grammar.* By Ventura Fuentes and Victor E. François. (4s. 6d. net. Macmillan.)

Beginning with the simplest rules and phrases, the book gives the student all he needs to enable him to read, write, and speak the Spanish language. There are passages for reading, modern Spanish, with conversation and commercial expressions, two vocabularies, and numerous exercises. The plan adopted is to make a passage in Spanish the basis of each lesson, grammar rules are deduced and plentiful exercises added. There are numerous illustrations from photographs of South American or Spanish scenes. These can be used as subjects for conversation or descriptive writing.

#### ENGLISH.

*English Dictations for Home Work.* By Hardress O'Grady. (1s. 4d. Constable.)

The proved utility of French Dictations for Home Work has induced the publishers to issue this volume. For those who are not familiar with the method, it may be stated that the book contains a number of short extracts in English printed in phonetic symbols. These may be written out by pupils, in the ordinary spelling, as home-work. Of course, the use of a dictionary is not allowed.

"The Granta Shakespeare"—*Cymbeline.* Edited by J. H. Lobban. (1s. net. Cambridge University Press.)

The volumes in this series are as pleasant to hold and read as any we have seen. An advantage is that they look like ordinary books and do not announce themselves as lesson-books. They are not overweighted with introductions, and the notes and glossary at the end are kept well within reasonable bounds. In this volume the play occupies three times as many pages as the editor takes to

himself. The young reader is therefore led to the right conclusion that the play is of greater importance than the comments.

*Njal and Gunnar.* A Tale of Old Iceland. By H. Malim. (1s. Macmillan.)

This fresh volume in the series of English Literature for Secondary Schools contains a story from Sir G. W. Dasent's "*Story of Burnt Njal*," retold by Mr. Malim. The story itself fills more than 100 pages. There are short introduction and notes. In the same series selections from *Le Morte d'Arthur* of Sir Thomas Malory, edited by Dorothy M. Macardle.

*Some Minor Poems of the Middle Ages.* Selected and arranged, with an Introduction, by Mary G. Segar, and a Glossary by Emmeline Paxton. (2s. net. Longmans.)

This little volume has a threefold purpose. It renders accessible to ordinary readers a number of lyrics belonging to the middle period of English literature. The glossary makes it easy to follow the meaning. Students of language can trace from this volume the growth of English. Students of literature or history will be helped to realize the spirit of the Middle Ages.

*A First Course of English Phonetics.* By Harold E. Palmer. (2s. 6d. net. Heffer.)

The somewhat lengthy sub-title explains the aims of the writer. He gives "an explanation of the scope of the science of phonetics, the theory of sounds, and a number of articulation, pronunciation, and transcription exercises. It may be added that the book is clearly printed and well provided with diagrams.

*Discovery and Commerce.* By David W. Oates. (6d. Macmillan.)

A new volume in "Here and There Stories," of the senior grade. It contains an account of Marco Polo, the Cabots, Columbus, and Captain Cook. There are illustrations from ancient sources.

*A Shakespeare Dictionary.* Part I: *Julius Caesar.* By Arthur E. Baker, Borough Librarian, Taunton, England. (1s. 9d. net. From the author.)

Mr. Baker's object is to bring together the names of the characters, place-names and other words, whether fictitious or historical, created or utilized by Shakespeare. The plays will be issued separately at nominal prices and, when the work is complete, title-page and index will be supplied. "As You Like It" is in preparation. Under the heading, "Brutus, Marcus" (to give an example) we have a reference to every line in the play in which the name is used, followed by an account of Brutus's life. Under "Lupercal" there are the references and a full description of the festival.

*Historical Passages for Précis Writing.* By F. E. Robeson. (2s. net. Oxford University Press.)

Mr. Robeson writes a brief introduction summarizing the rules and methods for producing a good précis. He also cites the instructions issued by the Civil Service Commissioners. Then follow 43 extracts from historians, each involving about an hour's work for writing a précis.

*Poetry for Repetition.* Selected and Edited by E. H. Blakeney. (1s. 6d. Bell.)

There are 117 pieces, mostly short, so that they can be learnt by heart. These are taken from some eighty poets, so that a wide range is secured. A note on poetry, brief explanatory notes on the pieces, and an index to the poets quoted complete the volume.

*English Grammar: Descriptive and Historical.* By T. G. Tucker and R. S. Wallace. (3s. net. Cambridge University Press.)

The authors have aimed at bringing a knowledge of comparative grammar and of the historical grammar of English to bear upon our language as it is to-day. The book is written in paragraph form for straightforward reading, and is not intended as a class-book. Special attention is paid to those difficulties in modern English that are felt by all students of the language.

#### HISTORY.

*Why Britain Went to War.* By Sir Edward Parrott. (1s. 6d. Nelson.)

Intended probably as a reader for the higher classes of public elementary schools. It is in readable type, and contains many illustrations. It gives the story of the nations concerned in the present War, up to the moment of its declaration.

*An Experiment in Practical Civics.* By E. M. White. (2d. Watts.) Shows how a mistress at Brighton, with the help of her pupils, arranged an exhibition illustrating the growth and present activities of the town.

*History's Background.* Book I: Eurasia, including the Mediterranean Region. The Dawn of History to the Close of the Fifteenth Century. By J. S. Townsend and T. Franklin. (1s. 6d. net. Macmillan.)

The authors propose a series of historical geography readers to serve as a link between the two subjects, and show the influence of geographical conditions upon leading historical movements. The books are intended for senior classes of elementary schools or junior

classes of secondary schools. Maps necessary to illustrate the text are given.

*Children of the Empire.* By C. Gasquoine Hartley and Arthur D. Lewis. (Werner Laurie.)

Well illustrated and well printed on stout paper. Written to give the young reader grounds for a feeling of patriotism. The authors describe the conditions in various parts of the Empire, and show how liberty grew.

*The Earliest Voyages Round the World, 1519-1617.* Edited by Philip F. Alexander. (3s. net. Cambridge University Press.)

Contains the voyages of Magellan, Drake, Cavendish, Le Maire, and Houten, with an introduction and notes by the editor.

*The Towns of Roman Britain.* By the Rev. J. O. Bevan. (2s. 6d. net. Chapman & Hall.)

Mr. Bevan writes an introduction which enables the reader to understand the Roman invasion and follow its course geographically, and adds notes on some thirty towns of Roman origin.

*Australia.* By J. W. Gregory. (1s. 3d. net. Cambridge University Press.)

Prof. Gregory aims at giving, within the limits of a brief sketch, a fairly complete account of the country—its discovery and early history; its political development, together with social and industrial conditions; its flora, fauna, natural features, and products.

*This Realm, This England! Born Again.* Short National Studies by John Kirkpatrick. (1s. 6d. net. Simpkin, Marshall.)

The author, Emeritus Professor in the University of Edinburgh, would stir the nation to a serious consideration of the problems raised by the War, and deals with National Service, citizenship, industries, religion, drink, strikes, and reform.

*Japan: From the Age of the Gods to the Fall of Tsingtau.* By F. Hadland Davis. (2s. 6d. net. Jack.)

This volume belongs to "The Nation's Histories," a new series designed to give a clear and interesting account of various nations from the earliest times. There are many illustrations, an index, and appendixes giving the latest information available as to present industrial and social conditions.

*The German Colonial Empire: its Beginning and Ending.* By Paolo Giordani. Translated by Mrs. G. W. Hamilton. (2s. 6d. net. Bell.)

The writer traces the origin of German Colonial expansion, sketches

the German Colonies and their activities, and shows how the idea of *Welt-Politik* arose.

*The Government of the United Kingdom: its Colonies and Dependencies.* By Albert E. Hogan. Third edition, revised and enlarged. (2s. 6d. Clive.)

Dr. Hogan's book, specially written to meet the requirements of candidates preparing for the Teacher's Certificate Examination, has already run through two editions. The preparation of the third edition, involving certain changes and additions up to 1911, has been entrusted to Mr. A. W. Parry.

RELIGION.

*The Books of Ezra and Nehemiah.* By T. W. Crafer. (1s. 6d. net. Cambridge University Press.)

Contains the text in clear, though rather small, type of the Revised Version, with abundant foot-notes, simple enough for young students, but containing the main results of modern scholarship. Dr. Crafer writes a full historical and explanatory introduction.

*The Cross of Job.* By H. Wheeler Robinson. (1s. 6d. net. Student Christian Movement.)

The contents of this book have been given as lectures to non-theological students, and the author thinks that they may serve as an introduction to "one of the most fascinating" books of the Old Testament. The general line taken is that critical study brings gain rather than loss to a devotional use of the Bible, while the study of the Old is necessary to an understanding of the New Testament. Appendixes contain help for systematic study.

*The Student's Catholic Doctrine.* By Charles Hart. (3s. 6d. net. Washbourne.)

A complete statement of the doctrine of the Church of Rome for the use of students in colleges, prospective teachers, and intending converts.

*The Jesus of History.* By T. R. Glover. With a Foreword by the Archbishop of Canterbury. (3s. 6d. net. Student Christian Movement.)

The book has grown out of lectures upon the historical Jesus given recently in many cities in India. The aim is to suggest lines of study that will deepen love of and interest in Jesus. The Archbishop commends it confidently.

(Continued on page 76.)

**450 MEDALS & PRIZES !!**

**STUDENT'S ELEMENTARY**

**BOOK-KEEPING**

By ARTHUR FIELDHOUSE, Accountant,

66 West Parade, Huddersfield,

who will forward copy Index and Specimen Pages on receipt of Post Card addressed to Box A 27, Huddersfield.

364 Pages. 21st Edition. Post Free, 2s.  
100 Exercises. 350 Questions.

Teacher's Specimen Copy, from Author only, 1s. 4d.

The ONLY TEXTBOOK to which there is a FULL KEY.

While this textbook more than covers all Elementary Examinations in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the Society of Arts, West Riding County Council, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.

The Exercises and the principles introduced therein are so carefully graded in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The Questions will be found very useful for testing the student's knowledge at each stage of his work. Examination Papers of the Society of Arts, the W.R.C.C., and College of Preceptors are included.

London: SIMPKIN, MARSHALL, HAMILTON, KENT & Co., Ltd.

**THE STUDENT'S BUSINESS METHODS**

and

**COMMERCIAL CORRESPONDENCE.**

By ARTHUR FIELDHOUSE, Accountant,  
66 West Parade, Huddersfield,

who will forward Specimen Pages and Index on receipt of Post Card addressed to P.O. Box A 27, Huddersfield.

Eighth Edition. 380 Pages.  
2s. 6d. Post Free.

80 TEST and EXAMINATION PAPERS,  
containing 1,300 QUESTIONS.

This is the only practical, up-to-date book on Commercial Correspondence and Office Work, and is characterized by the qualities that have made the author's other textbooks so popular. The lessons are well graduated, and the teacher is saved the drudgery of preparing Test Papers, one of which follows every chapter, in addition to numerous Examination Papers. PRACTICAL Work is provided in the Series of Business Transactions included in some of the Test Papers. It is the only Complete Guide, covering all the Elementary Examinations. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. Efficiency should be the first consideration. It is an excellent Handbook for the Junior in the Office. Teacher's Specimen, from Author only, 1s. 7d. post free.

London: SIMPKIN, MARSHALL, HAMILTON, KENT & Co., Ltd.

## MATHEMATICS.

*Second Year Mathematics for Secondary Schools.* By Ernst R. Breslich. (4s. net. Cambridge University Press.)

This volume carries on the work begun in Mr. Breslich's "First Year Mathematics." Technically a second edition, it is, as the preface states, a new contribution with its own plans and purposes. It may be used by classes that had only algebra during the first year.

*Revision Papers in Arithmetic.* By W. G. Borchardt. (1s. 6d.; with answers, 2s. Rivingtons.)

A useful book for examination purposes. Many of the examples given are taken from recent papers set by the various examining bodies that deal with secondary schools. There are 100 papers, each containing seven examples, and, in addition, 150 miscellaneous problems.

*William Oughtred: A Great Seventeenth Century Teacher of Mathematics.* By Florian Cajori. (4s. net. The Open Court.)

Contains a biography, an account of his principal works, and a discussion of his views and influence in the mathematical world.

*Housecraft Arithmetic.* By Theodora Mellor and Hilda H. Pearson. (1s. 6d. Longmans.)

A volume in Longmans' Housecraft Series for Secondary Schools. The work covers areas, volume, bills, metric system, graphs, investments, house accounts, taxes, banking, and the examples are taken in connexion with domestic consumption.

*The Geometrical Lectures of Isaac Barrow.* Translated by J. M. Child. (4s. 6d. net. Open Court.)

The translator gives notes and proofs, and discusses the advance made by Isaac Barrow on the work of his predecessors in infinitesimal calculus. A portrait of Isaac Barrow is given.

*Analytic Geometry.* By W. A. Wilson and J. I. Tracey. (3s. 6d. net. Harrap.)

The purpose of this volume is to present to the student those parts of the subject that are essential for the study of the calculus. Classes that aim at covering the ground in one year may do so by omitting certain of the chapters without breaking the continuity of the course. The authors have based their book on a pamphlet written by Prof. William Beebe.

*Algebra: Theoretical and Applied.* A Class-Book for Secondary, Higher Elementary, and Technical Schools. By A. H. Bell. (4s. 6d. Blackie.)

An extract from the preface contains a criticism, sometimes well-founded, of mathematical work in schools, and indicates the author's aim: "Although some boys find a satisfaction in juggling with meaningless symbols, the application of algebra to practical problems rouses their interest and fills them with enthusiasm." It is this quality, the substitution of problems the practical use of which is clear to the student, for academic and meaningless calculations that gives the book its value.

## SCIENCE.

*One Hundred Chemical Problems.* Suitable for University, Local, and other examinations. By E. Arthur Mason. (6d. net. Bell.)

A useful little book for test work.

*Science in the School.* Being Three Letters to the Literary Supplement of *The Times*. By Sir Clifford Allbutt. (6d. net. Heffer.)

Straightforward and deserved, as many people will think) blows at the want of method in school teaching that may well be felt by schoolmasters. "Excellent fellows," says the writer, come up to the University from the schools, "but of learning, as a rule, their minds are a blank."

*Chemistry for Beginners, and for use in Primary and Public Schools.*

By C. T. Kingzett. (2s. 6d. net. Baillière.)

The author is convinced that an elementary knowledge of chemistry should be given to every boy; and he has prepared this book in such a way that, even where there are no facilities for demonstrations or for practical work, its use as a reading book may be found helpful.

*General Chemistry for Colleges.* By Alexander Smith. (6s. 6d. net. Bell.)

This, a second edition of a widely used book, has been entirely rewritten, with a view to removing difficulties at the beginning, and making additions that are of importance to prospective students of biology and medicine.

*The Study of Animal Life.* By J. Arthur Thomson.

With Illustrations. Revised Edition. (6s. net. Murray.)

Prof. Thomson's book is well known and has run through several editions during the twenty five-years of its life. The plan involves four divisions:—(1) the life and activities of animals; (2) form and structure; (3) race; (4) evolution. In other words, Physiology, Morphology, Embryology, and *Ætiology*. The book is printed in good type, and there are many illustrations.

*Nature Study Lessons.* Seasonally arranged. By J. B. Philip. (2s. 6d. net. Cambridge University Press.)

There are twelve chapters, three for each of the four seasons of the

year. In each chapter a plant typical of the season is studied. The author's photographs of the work are reproduced. The book is intended for pupils of from eleven or twelve up to fourteen years of age, both in primary and in secondary schools.

*Farm Spies: How the Boys Investigated Field Crop Insects.*

By A. F. Conradi and W. A. Thomas. (Macmillan.)

The authors have written a number of stories about insect pests in which the facts are correct and the action proposed scientific. The form is interesting. The boll-weevil is introduced in a story entitled "A Great Fight to Save the Cotton," and the other common pests are dealt with in the same way. A book that should have a vogue in the United States.

*An Introduction to a Biology, and Other Papers.* By A. D. Darbishire. (7s. 6d. net. Cassell.)

A. D. Darbishire is best known for his work in further investigation of the laws of heredity as laid down by Mendel. His influence was already felt among biologists, and his powers would have enabled him to continue his researches with the certainty of adding valuable contributions to the science of biology had he not fallen a victim to the European War. In this volume are collected such literary remains as were still unpublished. The introduction to biology that he had planned is incomplete; but enough is written to show how he joins forces with Samuel Butler and Bergson, and opposes the existing schools of biologists. In Darbishire's opinion the study of biology must include man, and man not as an isolated piece of mechanism, but in relation to the tools by which he expresses himself. It would seem that biologists had fallen into the old error of the political economists, who dealt with man as an inanimate machine. The new biology must perforce, since Darbishire has lived, revise its limitations, and study man as a being with a soul, which may have, and probably has, been responsible for the material form.

## HANDCRAFT.

*Soft Toys and How to Make Them.* By E. A. Hickman. Illustrated. (2s. net. Robert Scott.)

This book may well help to introduce a pleasing variety into the handwork of young children. The letterpress is well printed, and the directions are clearly given. There are paper patterns to be used for each toy, and there is a photograph of the completed doll, rabbit, or elephant.

"Longmans' Housecraft Series for Secondary Schools."—*The High School Cookery Book.* By Grace Bradshaw, with Preface by Sara A. Bursall. Diagrams. (2s. 6d. Longmans.)

Miss Bradshaw has had a long and successful experience in teaching cookery in high schools. This book is the result of her work in placing the art of cooking on a scientific basis in accordance with the views now generally held, which demand that the chemistry of the subject should be studied. This line is taken in the more advanced examinations, taken at the conclusion of the high-school course, and for these the books will be found suitable.

*Needlecraft in the School.* By Margaret Swanson. Introduction by Prof. John Adams. Coloured plates and other illustrations. (5s. Longmans.)

Prof. Adams's introduction would make any reader wish he were in a position to work through Miss Swanson's book with small boys and girls: for it is not only to girls that the book is addressed. The power to use a needle does not make our naval handy-men less manly, but Miss Swanson is a careful observer, and does not expect the two sexes to produce the same type of work. Section I is for children up to twelve years (including boys' sewing); Section II (over twelve), millinery; Section III for training college students. The book is very fully illustrated with diagrams, and there are coloured plates of more elaborate embroideries. Certainly a book to be considered by all teachers of needlecraft.

## NOT CLASSIFIED.

*Be a Man! A Word in Season to Junior Boys.* By H. Bucknall. Preface by Sir John McClure. (2s. 6d. net. Harrap.)

In his brief preface Sir John McClure says: "It is rarely indeed that one comes across a series of such good, strong, straightforward talks to boys." After reading the book we can whole-heartedly endorse this opinion. Mr. Bucknall is neither a preacher nor a sentimentalist, but he knows his schoolboy, and how to lead him on to make the best of his powers, to win courage, honesty, seriousness, and clear thinking. Other schoolmasters, and parents also, may profit from Mr. Bucknall's talks, which could, on occasion, be read aloud to boys.

*Oxford University Handbook.* Being the twenty-first edition of the "Student's Handbook," revised to September 1914 and with Addenda, December 1916. (2s. 6d. net. Clarendon Press.)

The index and table of contents enable the reader to find the information he wants without trouble. The necessary details are given as to conditions of residence, courses of study, examinations, and scholarships.

"Macmillan's Commercial Series." — *The Science and Art of Salesmanship.* By Simon Robert Hoover. (3s. 6d. net. Macmillan.)

The writer of this book is the Principal of a High School of Commerce in the United States, and the volume is intended for school use. It is directed rather at the Traveller who sells wholesale to the retailer, than to the counterman who sells to the individual user of the commodity. It is well written and would certainly prove both interesting and helpful to the Commercial Traveller.

*The Next War: The British Industries Fair.* By C. H. Betts and Matthias Watts. (1s. net. Simpkin, Marshall.)

The Board of Trade have decided to organize after the War a huge industrial fair on the lines of the well-known Leipzig Fair. The present volumes explain the objects of the movement and urge upon business men the need for it. There are many portraits of industrial leaders.

**Handwriting.**—(1) *Handwriting in the Light of the Present Day Requirements.* By G. C. Jarvis. (1s. net.) (2) *Free-Arm Writing Book* (to accompany above). (6d. net.) (George Philip.)

Mr. Jarvis addresses teachers and would persuade them that handwriting is an art not to be neglected and one that can be acquired with industry. The style he advocates is very clear and free from affectation.

*I Sometimes Think. Essays for Young People.* By Stephen Paget. (5s. net. Macmillan.)

Mr. Paget, who tells us in his preface that he looks forward to the title of "Old Fossil" bestowed by his grandchildren, writes a series of essays in a pleasant and leisurely mood of philosophizing. The reader who is not feeling hurried and who likes to linger awhile over subjects that have no direct bearing on examinations or professional advancement will find much to interest him in London, moving pictures, words, and science. But a word of warning may be given. The word "young" is comparative. As in a previous title of Mr. Mr. Paget's, the young people concerned must be at least eighteen years of age in order to enjoy the book.

*The British Boys' Annual.* (5s. Cassell.)

A large volume, printed in double column, profusely illustrated and containing stories and articles by well known writers for boys.

*The Empire in Arms.* An account of the British Army, the British Navy, and the Indian and Colonial Forces: their Work, Weapons, and Organization for War. Edited by Herbert Strang. (6s. net. Frowde.)

A portentous book, requiring the table or the floor for its support. The detailed information given of trenches and guns, explained by diagrams, will be found of great interest. There are many double-page illustrations, measuring 14 inches across.

**THEOSOPHY.**

*An Outline of Theosophy.* By C. W. Leadbeater. (The Theosophical Publishing Society.)

The reader is told which are the general principles of Theosophy and is assured that, when he has grasped them, he will be freed from the fear of death, have no sense of injustice against his surroundings, and will lead his life in a fuller and wider sense.

**DRAWING.**

*Model Drawing: Geometrical and Perspective.* With Architectural Examples. By C. Octavius Wright and W. Arthur Rudd. Illustrated by over 300 diagrams. (6s. net. Cambridge University Press.)

The joint authors are teachers in a secondary school, convinced by their experience that the cube, the sphere, and other formal geometrical models fail to arouse the real interest of the pupils or stimulate their imagination. Consequently architectural forms are here employed with a suggestion of historical development of architecture; but the book does not aim at being an architectural textbook.

**NAMES.**

*Surnames.* By Ernest Weekley. (6s. net. Murray.)

Prof. Weekley, whose hobby outside his University work has for some years been the study of names, has now issued a new volume to supplement the *Romanic of Names* which he previously issued. The subject is fascinating, and apparently without limits. The index of this volume contains some 6,000 names, but that by no means exhausts the full list. The plan of the book is to study certain groups of names together—e.g. names arising from occupations, from physical characteristics, from costume, or from corruption of place-names.

**GARDENING.**

*Everybody's Flower Garden.* By H. H. Thomas. (1s. net. Cassell.)

A handy little book, freely illustrated, giving the varied information on making and keeping a garden that the amateur is likely to want.

# DUSTLESS and HYGIENIC SCHOOLS

On all School, Laboratory, Library, &c., Floors and Linoleums of every description

USE

# FLORIGENE

(Regd.)

DURING EACH VACATION for Best Results.

BRITISH MADE.

It is **IMPORTANT** to **NOTE** that **ONE APPLICATION** of "Florigene" ALLAYS the DUST and DIRT for 2 to 12 MONTHS, according to traffic, not only during each Sweeping (without sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance. "Florigene" is also easily and quickly applied, and saves time and labour.

These sanitary, labour-saving, and economic advantages are **NOT** attained by sweeping-powders or any mechanical or other method.

**NEW ADDRESS:**— Send for Particulars, Medical Reports and Testimonials, to the Sole Manufacturers:

## Science Made Easy.

## CHEMISTRY FOR BEGINNERS.

BY  
C. T. KINGZETT, F.I.C., F.C.S.  
Past Vice-President, Society of Public Analysts;  
Hon. Member, Société Française d'Hygiène.

No handier book than this could be used in primary and public schools for instilling into the mind of pupils the knowledge of the essentials of chemistry and physics.  
It is written in an interesting and entertaining style, and in such a manner that any section of it may be used advantageously even when there are no facilities for giving practical laboratory demonstrations or illustrative chemical experiments.

PRICE 2/6 NET.

# THE COLLEGE OF PRECEPTORS

INCORPORATED BY ROYAL CHARTER  
BLOOMSBURY SQUARE, LONDON, W.C.1.

## LECTURES FOR TEACHERS ON THE SCIENCE, ART, AND HISTORY OF EDUCATION.

### COURSE OF TWELVE LECTURES ON THE ESSENTIALS OF EDUCATIONAL PSYCHOLOGY.

To be delivered at The College of Preceptors, Bloomsbury Square, London, W.C.1.

By JOHN ADAMS, M.A., B.Sc., LL.D., F.C.P.,  
Professor of Education in the University of London.

The Course of Lectures (the First Course of the Forty-fifth Annual Series) began on Thursday, February 8th, at 6.30 p.m. The Course is meant to meet the needs of teachers who wish to improve their acquaintance with what underlies the profession, whether they have any examination in view or not. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with examinations for the Associateship, the Licentiateship, and the Fellowship. The reading of the students will be guided, and problems set for their exercise. Every opportunity will be taken of making practical applications of psychological principles to the work of the classroom.

#### SYLLABUS.

VIII. (May 3.) *Invention and the Mental Flash.*—Place of invention in school work: why it has been so little dealt with in school: wide range of invention: pupil is inventing all the time: two ways of learning—stepwise and totalwise: the mind works totalwise in invention: the place of "the problem" in school exercises: school training in invention: the *flash* of insight.

IX. (May 10.) *Instinct and Habit.*—Nature of instincts and their relation to intellect: educability and eradicability of instincts: their function in the race and in the individual: relation between instinct and habit: Rousseau's condemnation of habit-forming: place of consciousness in relation to the habitual: accommodation and correlation: the "bundle of good habits."

X. (May 17.) *The Affective Aspect.*—Every intellectual process has an accompanying affective tone: the Freudian dissociation: the emotions and their control: the mechanism of the emotions: their function in spiritual life: their manipulation by the educator: distinction between the emotions and the senti-

ments: McDougall's theory of the relation between the emotions and the instincts.

XI. (May 24.) *The Will and its Training.*—Dæmonic view of the will, and its dangers: personality and character: the theory of the "inner court": nature of motives: the fallacy underlying the phrase "the strongest motive": desire and will: origin of the will: possibility of training the will: meaning of the terms "weak will," "breaking the will": *aboulia*: educational implications of the freedom of the will.

XII. (May 31.) *Experimental Psychology.*—Fundamental assumption underlying this branch of psychology: special characteristics of this branch: experience and experiment: free experiment and laboratory experiment: instruments and methods used in experimental psychology: the scientific method: correlation and other formulæ: relation between experimental psychology and experimental pedagogy.

#### FEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

\*.\* Members of the College have free admission to the Course.

## The Journal of Education.

*A Monthly Record and Review.*

### Notice of Increased Price.

The price of "The Journal of Education" is now EIGHTPENCE per copy; Ninepence post free. Prepaid Subscription, Nine shillings per annum.

"The Journal of Education," now the oldest monthly of its kind, hopes, by help of this temporary increase in price, to carry out on the same scale the task it has pursued for the last forty years as an independent organ, and still to enlist the support of educationists and teachers of the Empire, both at home and abroad.

London: WILLIAM RICE, Junr., 3 Ludgate Broadway, E.C.4.

## THE School World.

**A MONTHLY MAGAZINE OF EDUCATIONAL  
WORK AND PROGRESS.**

**THE** aim of "The School World" is to provide teachers with information of **practical and permanent value.** To this end all important changes and developments affecting education are dealt with by **leading authorities and experienced teachers.**

The magazine is indispensable to all educational workers who desire to **keep in touch with modern methods of education.**

**PRICE 6d. VOLUME XVII, 1916, 7s. 6d. net.**

Educational Agents,

158 to 162 OXFORD STREET,  
LONDON, W.1.

Directors:

S. A. TRUMAN.  
JAMES HEARD, B.A.  
(Trinity College, Cambridge).

Telegrams—"TUTORESS, OX, LONDON."  
Telephone—No. 1136 Museum.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

### A.—EMPLOYMENT DEPARTMENT.

#### (i) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

#### (ii) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

#### (iii) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

### B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER OF SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers.

All communications and inquiries are treated in the strictest confidence.

### C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

## A Selection of Messrs. LONGMANS, GREEN & Co.'s List of Educational Works in French, Latin, History, Geography, and Mathematics.

### FRENCH.

The Educational Times.

Until further notice, "The Educational Times" will be issued four times a year — on the 1st of February, May, August, and November. The next issue will appear on November 1st.

Communications intended for the Editor should be addressed to Ulverscroft, High Wycombe.

THE SECONDARY SCHOOL EXAMINATIONS COUNCIL.

Just three years ago, writing on the Board of Education Circular 849, we said that the proposals contained in it were dead, because they were based upon the German leaving examination for secondary schools, and that, war having broken out, Englishmen would not stand an examination scheme copied from Germany. But the Board of Education have now revived the proposals, have ordered them to be carried out, and by the time these words are issued they will be in force. During the War we are ready to obey any orders of the Government that make towards the carrying on of the War. Individual liberty has been largely curtailed, and rightly curtailed, in the face of a grave national danger. But in educational matters we are not planning for present emergencies, but for the future development of the nation. In education, above all things, we need freedom, and the Board have put upon us a yoke that is likely to have disastrous effects.

The Board's scheme, to come into operation on August 1 of this year, is as follows:—The Board will

undertake the functions and responsibilities of a co-ordinating authority for secondary school examinations, with the assistance of "The Secondary School Examinations Council." This Council is to consist of eighteen persons and, in the first instance, is thus constituted: nine representatives of University examining bodies, four representatives of Local Education Authorities, four representatives of the Teachers Registration Council, and one representative of a Standing Committee of professional bodies. The President of the Board will, in the first instance, appoint a Chairman from outside the Council. He has appointed the Rev. W. Temple.

This Council have power to advise the Board on the subject of co-ordinating examinations. Officers of the Board will be present at the meetings, and the Council must consult the Board "before committing themselves on questions of principles or policy which are controversial or specially important."

Certain criticisms are inevitably suggested. The Council will be a dummy: the real power lies with the Board. Thus we have the Board assuming the control of the examination of all secondary schools that are within their sphere of influence. But, if full powers had been given by the Board to the Examinations Council, the result might well have been equally unsatisfactory. It is a self-evident fact that school education is very largely controlled by the examinations for which the pupils are prepared. Consider the composition of this body. Half the members are chosen because they have experience in the management of school examinations. They are on the Council because they are business administrators. They may understand the needs of education; they may be men of imagination, and have the power of seeing what changes in education are essential; but it is not on these grounds that they are chosen. Of the remaining half of the Council, four members are administrative functionaries. They also may have deep knowledge of education, but they are chosen as business managers. One member is to represent organized professions, such as medicine. The contribution of teachers towards this Council that proposes, with the

permission of the Board, to govern schools, consists of four members elected by the Teachers Registration Council. These may or may not be teachers in secondary schools. If the Registration Council chooses, it may send representatives of Universities.

Men and women, say the Board, will alike be eligible. So far as information is at present available, there will probably be three women on the Council: two from the Teachers' Registration Council and one from the Northern Universities Examination Board.

The main function of this body is to approve of itself. The members will have to recommend to the Board examining bodies, which must be Universities (except for music, drawing, and manual instruction). The nine University representatives may recommend the eight Universities which they represent. They will be called upon to see that all examining bodies (themselves) maintain an adequate standard. They will also "be at liberty to submit suggestions" to the Board for the improvement of examinations (their own). They are to establish two examinations: one suitable for pupils about the age of sixteen and one for pupils two years older. Nothing is said in the Circulars about the territorial divisions of the country from which the eight Universities are to collect the £2 which the Board pay for each pupil examined, but it is thought that the Board intend to divide England into University provinces. Poaching will then be illegal.

The worst danger that lies in this plan of the Board of Education concerns the granting of certificates. The intention of the Board is to grant a certificate of a special character to those pupils who have passed successfully through a secondary school, and they clearly hope that this certificate will be generally accepted by professional bodies as the key to their entrance doors. It is here that the German system is very closely followed. It means, if the scheme works out as its promoters hope, that entrance to the professions will be in practice limited to those who have passed through a secondary school under the control of the Board. In this democratic country, at a time when we are trying to widen the opportunities of education, when Mr. Herbert Lewis's report would make continuation education compulsory up to the age of eighteen, if a child fails to get a junior county scholarship at the age of eleven or thereabouts, that child's chance of leaving the ranks of the manual workers is very slight. This is practically the German system. Only those who pass through a State secondary school can enter the Universities, the Civil Service, and the higher commercial grades. The rest remain hewers of wood and drawers of water.

It is true that the Board do not close the door entirely. They expressly say that, although the examinations are designed for pupils in recognized secondary schools, provision must be made for the admission of other candidates under nineteen years of

age. For these candidates there is to be a special form of certificate, designed to show that they have not been educated in a recognized secondary school. It is quite clear that, if the Board's intentions are carried out, this certificate will have a slighter value than the former one. The child in the elementary school who develops his or her powers after the scholarship age, and by industry and ability manages to secure a good education outside the State secondary-school system, will be at a marked disadvantage in the matter of the certificate to be gained.

Schools owned by individual proprietors and other secondary schools not recognized by the Board will suffer the same disability. This autocratic action of the Board makes it more than ever imperative that private schools should assert themselves. It is right that the State should aid education and see that suitable opportunities are provided for all citizens; but it is unwise that the State should so control education as to reduce all schools to a level of mechanical efficiency. Freedom must be retained for education, otherwise it dies.

We have shown that this fresh examination policy of the Board is opposed to the democratic growth of the country. Its intention is to destroy all private schools which do not conform to the Board's regulations and merit their "recognition." It puts another weight to check the free development of State secondary schools. The policy is German in origin and in spirit. When the nation understands this, the policy will have to be reversed, and education will have to receive that measure of freedom without which it cannot live.

[On July 12, the President of the Board, accompanied by Sir Amherst Selby-Bigge, Prof. Gilbert Murray, and the Hon. W. N. Bruce, received a deputation from the Head Masters' Association and the Federal Council of Secondary School Associations. The deputation urged:—(1) That the representation of teachers on the Secondary School Examinations Council was insufficient. The reply was that the constitution of the Council was provisional, and that the appointment of the Rev. W. Temple as chairman indicated that teachers' interests would be safeguarded. (2) That the Board should see that the additional grants were expended on salaries, as was the intention of the Board. The reply to this was "sympathetic." (3) That the new regulations for advanced courses in secondary schools should not be allowed to produce a differentiation of secondary schools into lower and higher. In reply to this, Mr. Fisher criticized the "tops" of some secondary schools, but said that transference would not be compulsory.]

In reference to the expected introduction of an Education Bill, Mr. Bonar Law said, on July 18, in answer to a question whether the Bill would be introduced before the adjournment: "I should very much like, if it is found possible, to do that; but I cannot absolutely say whether it can be done."]

## NOTES.

It is stated that the Government propose to introduce a Pensions Bill for secondary and technical teachers. The Bill will probably provide for an annuity at the age of sixty, secured through an Insurance Society. The teacher and the Local Education Authority would each pay half of the annual premium. It is very necessary that compulsory saving should be introduced in this way; but salaries are so low that it would be equitable for Education Authorities to pay the whole of the premiums. It may be that this Bill will pass during the Session. It is also stated that Mr. Fisher will introduce his expected Education Bill. If he does so, it will be to give the country an opportunity of discussing its provisions; the Bill is not expected to pass this Session. The Bill will no doubt contain clauses dealing with nursery schools, continuation education up to the age of eighteen, and further facilities for secondary education. It will probably aim at a reduction in the size of classes and provide money for the consequent increase in the number of teachers. And it will certainly try to secure for teachers a better status and better salaries; though such matters are not greatly influenced by Acts of Parliament.

At the moment it is administration mainly that occupies the country. The examination circulars of the Board suggest that they have in mind a division of England into educational provinces centring round a University; questions have arisen, and will need to be decided, as to the age at which the State shall assume control of the education of infants, and of the age at which the school education of the citizen shall cease; the quantity of secondary education to be provided, and the proportion of children to be removed annually from elementary to secondary schools, are matters of hot debate; the facilities to be offered by secondary schools is another subject of great uncertainty. These are administrative questions, and will be settled by administrators, by politicians, newspapers, departmental officials, and Local Education Authorities. In the welter of these urgent matters, other questions of no less urgency are likely to be overlooked. What is to be taught in the schools? What is the purpose of education? Are we to aim at making citizens useful to employers and useful to the State? Or is the purpose of education to give the fullest opportunities of life to everyone? It is not schoolmasters, secretaries, functionaries, or politicians who can solve such questions. It is idealists, men of imagination, who are unfortunately few, and not always listened to by their own generation.

SIR HENRY NEWBOLT, in the *English Review* for June, writes an article in which he endeavours to show how life may be restored to the dead bones of linguistic teaching. For the existing deadness he does not blame the schoolmaster, except in so far as he assents to an impossible system imposed upon him by "orders from above." The last phrase seems to refer mainly to school examining bodies. Grammar is science, and in teaching this science the language-master often finds that literature is crowded out. Often, too, he is made to feel that "wasting time" on literature does not pay for examination. "Life," says Sir Henry, "is a highly complex activity. . . . the intellectual, the æsthetic, and the moral activities should all be trained and stimulated. Science is the province of the intellect, Art of the æsthetic power, and Conduct of the moral sense. . . . The three natural affections of the human spirit are the love of truth, the love of beauty, and the love of righteousness; man loves all these by nature, for their own sake, and no system of education can claim to be adequate if it does not help him to develop these natural and disinterested loves." Schoolmasters, for perhaps one hour in the week, may realize the truth of these claims; but, if during all the other hours they are forced by the conditions of their employment to think of examinations, small wonder if their teaching is apt to become lifeless.

WE venture on a further quotation from Sir Henry Newbolt's article:—"Finally, the method of examination must be changed. . . . the boy must be asked such reasonable questions as might occur in conversation between two intelligent and interested talkers, and he must be classed according as he answers them in his own way, with understanding and sincerity." The last word "sincerity" is worthy of notice. Sir Henry continues: "The scheme which I have faintly outlined may prove to be unacceptable to those in authority who rivet the chains of education upon our schools. If so, we who are not in authority must do our best to correct and supplement a defective system. By all means in our power we must see that the generations which are to be touched by the great scientific minds shall be touched also by the great creative minds." Such things need saying to-day; but the power of the authorities must not be exaggerated. The authorities exist to make the educational machine run smoothly: their function is not to wrap the minds and hearts of teachers in swaddling bands. If they try to do so the teacher can decline to be influenced. Examinations, too — they exist for the benefit of schools. Schools can make of the instrument what they will, unless, of course, they are all put under the control of a central examination body, deaf to suggestions.

"THE Education of the Citizen" is the title of an article in the June number of the *Round Table*, which has been written by one of those "men of imagination" whose influence we desire in educational matters. We are often confused by phrases. Citizen education is often understood as meaning teaching about the duties of a jurymen and such-like matters. Before we can decide what education is proper for a "citizen," we must visualize the ideal citizen. Is he the mechanic who can produce most in a given time? Is he the clerk who can write most fluently in three languages? We have to decide whether we are teaching the child for his own sake or for the sake of someone else. "The fundamental truth in modern life," said President Wilson, "as I analyse it, is a profound ignorance." All trade disputes, all international troubles, are the result of ignorance. The man who has been immersed in some engrossing occupation for half his life is usually terribly ignorant of everything outside his immediate occupation. One aim of education is to dissipate ignorance as far as it is possible to do so. Ignorance is not dissipated by a narrow training in a limited field. To the best of our powers we must enlarge imagination, and imagination is fed on facts.

THE prevailing view in England is that success is represented by the style of living. *Success.* We ask what a man has done; but we are not satisfied of the success of his achievement unless the return is expressed in an adequate number of pounds sterling. The writer in the *Round Table*, whom we have already referred to, says: "To say that this *moral* education is the only education that should be given, whether in the schools or afterwards, would appear to be extravagant. It is the simple truth." This generation is apt to look upon moral education as the antithesis of intellectual education. "Be good, sweet maid, and let who will be clever," is a saying that has entered into the mind of the nation and brought about a severance of two things that are mutually interdependent. Goodness is based on knowledge, on intellectual thought. Many a simple and ignorant man who is good in spite of his simplicity and ignorance, really owes his goodness to the deep intellectual wrestling of some saint who has fought out with much strife and anxious thought a problem of conduct, the solution of which has henceforth become the common property of every subsequent generation. "What we attribute to the feelings and call 'instinctive,' is the wisdom of the past become traditional, and on that account instilled into us and assimilated by us as we grow. We do not realize that every shred of that wisdom has cost thought as well as volition, exercised the reasoning powers as well as the emotions. It is a dangerous doctrine that morality is not a matter which men need think about or try to understand."

"MORALITY," says the writer in the *Round Table*, and to these words he adds the emphasis of italics: "Morality is the process of extracting from the station which we occupy, and the events which happen to us, the highest value that is implicit in them." This can only be done by education, by developing as far as possible the faculties that we possess, by learning, studying, practising, and doing. Latin prose is not taught by reading books on "How to write Latin Prose" or by listening to dissertations from teachers, but by writing Latin prose. Goodness is not learnt from sermons or from ethical instruction, but it is acquired by doing good deeds. The sole end of education is that the citizen should do good deeds. Education is not limited to the influences of the form-room; it begins in the cradle and does not end till death. But, so far as concerns school education, the important thing is that the teacher should have in mind and be constantly conscious of the real aim of education, so that it may influence all his teaching, all his actions. Otherwise, the more immediate aims, such as passing examinations, turning out good correspondent clerks, and the like, come to exercise sway over his mind, and his educational influence is the poorer.

ALL the members of the College will join in congratulations to Sir Philip Magnus on the Baronetcy that has been granted to him. Sir Philip has been for many years a strenuous worker in the cause of education. There are, in fact, few educational activities in London with which he has not been connected. The University, the School Board, the City and Guilds Institute, have all been the scenes of his labour. Lastly—and not, in our opinion, least—he has been and still is President of the Council of the College of Preceptors.

THE lack of teachers in secondary schools is a matter of anxiety to appointing bodies; but in public elementary schools the dearth is still more marked. Local Authorities are in despair, and, like desperate men, they resort to desperate expedients. They do not differ, in the economic field, from other employers of labour. They have to make their terms sufficiently attractive to secure the workers they need. But the direct return from these workers cannot be counted in money values. Education Committees are unable to say, as the directors of an industrial concern might say, we can get such a value for our goods, therefore we can afford to pay such an amount for labour. The return from education is large, but it cannot be calculated in precise money terms, and so the employers of teachers haggle over the wages. They will not pay sufficient salaries to attract a sufficient number of teachers: they are offering to parents the bribe of a free education for such of their children as will promise to become teachers at a later date. Instead of the

lure at the end of the training period they offer a lure at the beginning, as Prof. John Adams phrases it in the *Times Educational Supplement*. The first of the two lures is entirely wrong. It is not right for a child of twelve to be bound: it is not possible to know whether a child at the age of twelve will make a teacher.

IN causing the removal of the main part of the Board of Education staff to South Kensington, Mr. Lloyd George has been careful to point out that no disrespect is intended to this important branch of the country's administration. Yet many people appear to look upon the removal as a snub. Years ago, when the State was tentatively putting out feelers towards secondary schools, the headquarters were at South Kensington. Later the secondary branch was brought to Whitehall, in order to remove it from the traditional view that South Kensington meant science only. All danger of that is now past. The Board's three departments—elementary, secondary, and University—are practically one and indivisible, wherever the offices may be. Mr. Fisher and his chief permanent officials will remain at Whitehall, in order to be in touch with Parliament. As things are, there may be advantages in this arrangement; but it is possible to see other advantages if South Kensington were to become the settled home of the Board. Too long has education been the sport of party politicians. At Whitehall, the officials in all their actions and plans are continually thinking "How will this be viewed over the way?" In the calmer academic atmosphere of South Kensington they might come to view education from an educational standpoint.

By the energy of M. le Comte Austin de Croze, an association has been started with the title of "The Classical French Theatre," for the performance in Great Britain of French classical drama for Universities, schools, and colleges. The Board of Education have encouraged the project, and several officers of the Board have allowed their names to appear on the list of supporters, among them Prof. Gilbert Murray. Other names are Prof. Gollancz, Mr. Stanley Leathes, Sir Philip Magnus, Sir Henry Newbolt, Mr. A. C. Benson, Mr. Cholmeley, Dr. Rouse, Miss Purdie, Miss Gray, and a number of head masters and head mistresses. The whole scheme includes proposals for establishing scholarships for British teachers, students, and pupils, to enable them to travel in France. The profits from the performances will be devoted to the scholarships.

THERE is one proposal in the Regulations for Secondary Schools recently issued by the Board of Education that will certainly arouse sharp opposition among head masters and head mistresses, and also among

governing bodies and parents, when they come to grasp the significance of the changes that are ordered. Under the new examination scheme, secondary schools recognized by the Board will prepare their pupils for an examination at about the age of sixteen. Those pupils who pass this examination creditably, and who are to continue their school education until the age of eighteen, will then be called upon to select one of three departments of study: (1) Science and Mathematics; (2) Classics; (3) Modern Studies. The Board anticipate that in most cases a school will be able to provide teaching in one only of these three departments. "Two, or even in rare cases three, of these advanced courses may be organized in a large school . . . but in most cases it is anticipated that the number of advanced pupils in the school will not allow of more than one course being organized." It follows, then, that most boys and girls who, at the age of sixteen in secondary schools, wish to continue their education, will be transferred to other secondary schools. In large towns this procedure may entail the minimum of inconvenience; but a very large number of children do not live within easy reach of more than one secondary school.

THE proposal appears to be an excellent bit of organization. So good, in fact, that it seems ungracious to criticize it. It is quite clear that large numbers of smaller schools will have few pupils staying to the age of eighteen—perhaps two, perhaps a dozen. It would be very wasteful for such schools to be staffed in such a way as to admit of carrying on the three advanced courses. Nothing is more natural than that one school should specialize in science and mathematics, another in classics, and a third in modern studies. The scheme is cheap. Even if railway fares have to be paid or boarding fees granted by the Local Authority, this would be less costly than maintaining the three departments. And yet, though to the official in his room the plan may well seem perfect, when it comes to trying to carry it out it is found that certain human qualities, that will wreck the scheme, have been overlooked. Are the schools to lose their promising pupils at sixteen? Are parents going to send their children to a school which will turn them out at sixteen? To avoid the rough transplantation, the parent who intends his child to remain to the age of eighteen will send him from the beginning to the school that offers the desired advanced course. Will Local Education Authorities allow certain of their schools to be discredited? Is each school to have a label—Science, or Greek, or French? The Board's zeal for organization must take into account that men and women are not so easy to deal with as lumps of coal.

THE campaign against ignorance that, under the name of "Baby Week," was carried out during the month of July, will do much to help mothers, fathers, em-

ployers, Local Authorities, and the State to realize their responsibilities. The large mortality among infants is preventible to a great extent. It is ignorance of the care necessary before birth, and of proper feeding and management after birth, that are the main causes of unnecessary deaths. Fresh air and cleanliness are also of supreme importance, and these matters in the crowded quarters of large cities are the concern of the Authority: they are generally beyond the influence of the parent. It is not only the waste of life that it is desirable to prevent. If the death-rate is high, it follows that a large number of infants, though they survive, never get the chance of becoming physically capable men and women.

THE Board of Education Report for 1915-1916 tells us that there are in England altogether 1,056 secondary schools recognized by the Board as efficient. Of these, 931 are on the grant list. It is interesting to note the government of these schools: 438 are controlled by Local Authorities; 424 are endowed schools, or "schools of a similar type"; 25 are schools of the Girls' Public Day School Trust; and 44 are controlled (whether with or without a formal educational trust) by Roman Catholic Orders or Communions. In addition to the grant-earning schools, the Board recognize 125 other schools. One of these is provided by a Local Authority, 101 are "endowed schools or schools of a similar type," 2 are controlled by Roman Catholic Orders, and 21 are private schools. The whole of these schools are said to be educating, in round numbers, some two hundred thousand pupils, the boys being slightly more numerous than the girls. It is brought out from these figures that the Board of Education are officially ignorant of the thousands of private schools that are giving secondary education to the boys and girls of the country. Yet it is held that this education is a matter of national importance. A complete educational survey, such as Prof. Sadler carried out for a few localities, becomes urgently imperative.

THE Association of Head Mistresses have issued a salary scale. The minimum initial salary for a head mistress is put at £400, "and there should be provision for regular increment." The initial salary of a non-graduate mistress is placed at £130, of a graduate at £150: in each case an annual increment of £10 up to £220. The Manchester Education Committee have just published a revised scale. For assistant mistresses in secondary schools they have four grades: (1) £100 to £120; (2) £120 to £160; (3) £160 to £200; (4) £200 to £240. In each case there is an annual increment of £10. Promotion to a higher grade is not automatic, but depends upon reports of the work. It is interesting to compare these two scales, which, as things are, appear fairly good, with a claim made by Mr. A. Randall Wells, writing in the *English Review*

for July. As a postscript to an article on "A British Commonwealth Party," he says:—"Since this was written the Minister of Education has made public his programme. He does not seem to grasp our needs. It is not a question of whether forty or fifty thousand men and women get £100 or £150 a year. Minute increases in salaries will do nothing towards education; they will only slightly improve the comfort of the present staffs in our schools. It is a revolution in standard that we need, and when we have a Minister of Education who speaks to us of thousands of masters and mistresses earning not less than £1,000 a year, and tens of thousands £500, we shall know that the importance of education has at last been realized."

THE Secondary Schools Association, of which Sir Philip Magnus is Chairman, have just published their Annual Report, from which it appears that there has been a year of serious work in drawing together the governing bodies of secondary schools and laying their views before the Board of Education and Local Authorities. We are reminded in this report that in 1915 the Association opposed the famous Circular 849, in which the Board of Education first expressed their views on the control of examinations for secondary schools. The Committee of the Association have helped to obtain alterations in schemes proposed by the Board of Education for secondary schools. By questions in Parliament and by deputations to Ministers they have elicited information and given public expression to the views of the governors of schools and of others interested in the work of secondary education.

WE have received a fly-leaf entitled "Essentials of a Satisfactory National Education," issued from the International New Thought Alliance (British Section), of which Mr. J. M. Heard is the Chairman. The paper demands opportunities of free education for all, and education of a character to enable every child "to live the fullest and most socially useful life of which he or she is capable." Homes, health, the spiritual basis, curriculum, and status of teachers are all dealt with, and in particular there is a striking paragraph on the "new discipline," from which we take the following:—"Parents and other educators should respect the child's instincts and activities, and provide a wholesome environment, giving them full play. As a rule, it is not their function to punish. The child must be allowed (except where there is danger of serious injury) to reap the consequences of his actions in the natural reaction of his environment. This environment should include other children, of all ages, equally free, whose interaction produces a *communis sensus*, or public sentiment. Thus the child will be ruled by a growing conscience, within and without, founded on a sense of individual and collective responsibility."

It was stated in the May issue of this paper that "the College of Preceptors have accepted an invitation to send representatives to an important conference organized by the Workers' Educational Association for May 3." This statement is incorrect.

## RECENT EVENTS.

In the beginning of May Mr. Fisher had an opportunity of a kind thoroughly congenial to him. He visited Plymouth to open a playing-field given to the Education Authority by Mr. and Mrs. Waldorf Astor. His first official action as President of the Board of Education was to secure from the Treasury a grant towards the maintenance of play-centres in large towns. During his visit to Plymouth Mr. Fisher addressed a large meeting, which gave him an enthusiastic welcome. He was evidently cheered by the signs of interest in education, and suggested that it was a remarkable fact that in the third year of a most exhausting War a large audience of men and women should be gathered together to consider education. He saw in this a fact full of brightest augury for the future. "I do not claim," he said, "that education is the most interesting subject in the world, but I do claim it is the most important; and when I use the phrase 'education,' I am not merely thinking of learning from books: I am thinking of the whole moral, intellectual, and physical development of our race."

### THE RATE-PAYER.

Mr. Fisher put the case for education in a way that would convince any opposing rate-payer who could be persuaded to listen. The consciousness that it is good for the nation as a whole that each individual should be educated is gaining ground; and progress is made each time a responsible speaker has the courage to make a bold profession of faith. He spoke of a dark sinister figure, the rate-payer, in the background, behind all the advancing educational agencies. "The country cannot afford," he said, "to allow its children to grow up undeveloped in mind, body, and character. I hear people say: 'Why should I pay for the education of somebody else's children? That is their affair, not mine.' But is it not everybody's affair that the Army and Navy shall be efficient; that industry and agriculture shall flourish; that crime and intemperance shall be diminished; that our men and women shall be brought up owning the sanctity of civic duties, temperate in habit, and possessing something of our previous heritage of culture? and how can any one of these great objects be obtained unless people are ready to spend money freely upon education . . . until rate-payers insist vehemently that the children who live in their locality shall have no worse an opportunity for obtaining education than the children who live in any other part of the country?"

### PARENTAL RESPONSIBILITY.

Mr. Fisher undoubtedly has the courage to express his opinions. It is often made a charge against the provision of educational opportunities that parental responsibility is thereby weakened. When Mr. Fisher meets this line of argument he says to himself: "The child of the poor parent who goes to a public elementary school at least spends every night of the year at home. The child of the rich parent who goes to a public school is committed—lock, stock, and barrel—to the schoolmaster of an expensive boarding establishment for a period of eight or nine years. Which of the two systems is calculated to develop the sense of parental responsibility?"

### TEACHERS' SALARIES.

"But, after all," said Mr. Fisher, "you will never seriously raise the level of our teaching, either in our country schools or in our town schools, until the country learns to pay the teachers better." The salary is a primary condition, but there is much besides; and Mr. Fisher went on to show that the teacher must still be a learner, and that opportunities must be provided for him. "As soon as the teacher winds up

the living mind within him, his utility as a teacher begins to cease. . . . What greater waste of time can there be for any mortal child than to be condemned to spend an hour of sunshine in the room with a bad teacher?" At a subsequent date (May 8) Mr. Fisher stated in the House of Commons, in answer to a question, that the minimum salary rates he had in view for certificated teachers were: men, £100; women, £90.

### THE CLASSICAL ASSOCIATION.

The Classical Association waited upon Mr. Fisher in the early part of May, and presented a series of resolutions that might be described as a manifesto in favour of providing wide-spread facilities for the study of the Roman and Greek languages, history, and literature. The main argument was that the children of the whole nation should have, in a democratic country, the privileges that had previously been the possession of a limited class only. The deputation thought this might be done by transferring suitable pupils to a school with a classical branch. Mr. Fisher was very sympathetic in his reply, and thought that the new scheme of development for secondary schools that he had outlined before the House of Commons would partly meet the wishes of the Classical Association. At the same time he pointed out that the Board are not in a position to impose curricula upon schools.

### THE HOUSE OF LORDS.

Viscount Haldane introduced a debate on National Education in the House of Lords on May 9. He was in favour of grouping County Authorities to form Provincial Authorities, arguing that the administrative need of the moment was for further devolution, and that while the Board could not successfully deal with 319 Local Authorities, they could do so with seven or eight. He also advocated some form of military training for boys between the years of fourteen and eighteen. The Bishop of Oxford approved of the proposal that all young people from the ages of fourteen to eighteen should have further compulsory education, but he thought the plan would have no reality unless it was accompanied by compulsory reduction in the hours of labour. The Earl of Crawford, replying for the Government, appeared not to be in favour of Provincial Authorities. A great deal of power had already devolved upon the Local Authorities, and more would be done in this direction; but he thought a locality would prefer to be in direct communication with the Board rather than through the intermediary channel of a Provincial Council. On the subject of religion, it was stated that there was no antagonism on the part of the working man to religion in itself, but only hostility to the machinery that was employed.

### THE BOARD AT SOUTH KENSINGTON.

At the beginning of June the greater part of the staff of the Board of Education was removed to the Victoria and Albert Museum at South Kensington; but the offices of Mr. Fisher and such other officers as need to be in close touch with Westminster during Parliamentary Sessions will remain at Whitehall. The reason for the change is that the Government require more space in the vicinity of the War Office and the Admiralty. At one time the Secondary Branch of the Board was housed at South Kensington. We do not suppose that the present arrangement is intended to be permanent; but, if it were so, there might be no disadvantage in moving the Board from the neighbourhood of Parliamentary turmoil and establishing it in the more peaceful area around the University of London.

### BIRTHDAY HONOURS.

Among the birthday honours are the following:—Baronetcy, Sir Philip Magnus; Knighthood, Dr. Thomas Gregory Foster, Mr. R. T. Glazebrook, Prof. W. J. Ashley, Mr. Graham Balfour, and Mr. E. C. Stirling.

### SUMMER COURSES.

The short courses arranged by the Board of Education to be held for teachers in secondary schools or training colleges during the Summer Vacation of 1917 are:

1. A course in French, for women teachers of modern languages in secondary schools recognized by the Board of Education as efficient, to be held at Bedford College for Women, Regent's Park, London, N.W.1, from August 24 to September 6,

inclusive. This course will be generally similar to that held at the same College in 1916, and in the selection of candidates for admission preference will be given to those who did not attend last year.

2. A course in methods of teaching elementary mathematics to children of eleven and upwards for teachers of that subject in secondary schools, to be held by permission of the London County Council at the London Day Training College, Southampton Row, London, W.C. 1, from August 27 to September 8, inclusive. As this course will be a part-time one only, and the number of admissions will be strictly limited, the selection will be restricted to teachers resident in or near London.

3. A course in English phonetics, for teachers engaged in giving instruction in subjects involving a knowledge of phonetics in training colleges, to be held at University College, Gower Street, London, W.C. 1, from August 27 to September 8, inclusive. This course will be planned with special regard to the needs of beginners in the study of phonetics.

Full particulars, with time-table and syllabus, of each of these courses will be circulated shortly by the Board to schools or colleges where teachers are employed who might wish to attend.

#### EDUCATION REFORM COUNCIL.

The President of the Board of Education has received a deputation from the Education Reform Council, which discussed some of the main questions dealt with in the report of the E.R.C. Mr. G. F. Daniell explained the origin of the Council, whose members are all persons of first-hand experience in educational administration and practice. Notwithstanding diversity of experience and tradition, a wide measure of agreement had been reached. The views of the E.R.C. on the block grant, Provincial Councils, and autonomous areas were explained by Mr. F. H. Toyne. Prof. T. P. Nunn discussed primary and post-primary education up to the age of eighteen. Prof. A. N. Whitehead spoke on examinations and inspection for secondary schools, advocating universal inspection.

Mr. Fisher expressed pleasure that so wide an organization of educationists had been considering practical schemes of reform, and that so much agreement had been reached as to the measures needed to improve the education of the nation.

#### ADOLESCENT EDUCATION.

It is a natural and healthy growth of democratic feeling that impels the State, as representing the community, to assume increasing responsibilities for each individual. In the past the State has considered it a duty to see that each individual obeyed the law, paid his taxes, and notified infectious diseases. It is now felt that the State has a further duty—it has to aim at such an organization as will afford to each individual the fullest opportunities of self-development and the completest life that his own powers and the conditions of civilization render possible. The State cannot in these days remain in a condition of complacent ease when a considerable proportion of its members are prevented by poverty or ignorance from becoming healthy and helpful citizens. This attitude of thought no longer implies the philanthropic mood; it implies a grasp of the fact that the soundness or unsoundness of the State depends upon the soundness or unsoundness of all its citizens.

This attitude is clearly seen in the Report of the Departmental Committee on "Juvenile Education in relation to Employment after the War," which was presided over by Mr. Herbert Lewis. This Report, in spite of the limitation of its title, deals with the whole problem of adolescent education, apart from the small proportion attending secondary schools. The tone of the Report and the point of view of the Committee are well indicated in the following paragraph taken from the introduction:—

#### THE AIM OF EDUCATION.

Any inquiry into education at the present juncture is big with issues of national fate. In the great work of reconstruction which

lies ahead there are aims to be set before us which will try, no less searchingly than war itself, the temper and enduring qualities of our race, and, in the realization of each and all of these, education, with its stimulus and its discipline, must be our stand-by. We have to perfect the civilization for which our men have shed their blood and our women their tears, to establish new standards of value in our judgment of what makes life worth living, more wholesome and more restrained ideas of recreation and behaviour, finer traditions of co-operation and kindly fellowship between class and class and between man and man. We have to restore the natural relations between the folk and the soil from which the folk derives its sustenance, to revivify with fresh scientific methods and better economic conditions the outworn practice of our agriculture, to learn over again that there is no greater public benefactor than the man who makes two ears of corn to grow where but one grew before. We have to bring research to bear upon the processes of our manufactures, to overhaul routine and eliminate waste, to carry our reputation for skilful workmanship and honest and intelligent trafficking into new markets and to maintain it in the old. These are tasks for a nation of trained character and robust physique, a nation alert to the things of the spirit, reverential of knowledge, reverential of its teachers, and generous in its estimate of what the production and maintenance of good teachers inevitably cost. Whether we are to be such a nation must now depend largely upon the will of those who have fought for us and upon the conception that they have come to form of what education can do in the building up and glorifying of national life. For ourselves [say the Committee], we are content to leave it to that arbitrament.

In this passage from the Committee's Report there are several utterances that will repay careful study. The same spirit is shown by the Workers' Educational Association in the following extract from their pamphlet on Educational Reconstruction:—

In the opinion of the Association the ideal underlying educational reform, in whatever direction it is undertaken, must be essentially humane and, in the broadest sense of the word, spiritual, and no improvements in legislation or administrative machinery can hope to achieve success unless those who are responsible for their working bear this fact constantly in mind. The object of the proposals submitted is not simply to improve the educational machinery of the country; they have been conceived in the hope and desire that they may serve to set free the spiritual forces which the War has so strikingly brought to light in every section of the people, nowhere more than among the working classes, and that they may thus contribute to the promotion of the work of reconstruction which must of necessity fall in so large a part upon the shoulders of the coming generation.

These two somewhat long quotations, which are by no means isolated examples of the present trend of public opinion, indicate the attitude of the leaders of thought towards the whole field of education. In the present article it is proposed to deal with secondary education alone.

#### SECONDARY EDUCATION.

Mr. Lewis's Committee decide that the secondary stage of education should begin at the age of fourteen, at which time compulsory full-time education in the public elementary schools will, according to their recommendations, cease. This age is fixed, not on the grounds put forward by physiologists that a great change in mental outlook takes place in every child about the age of thirteen or fourteen, necessitating a different form of education, but on the grounds of administrative expediency. They argue that at the present time it is not possible to secure general adherence to the proposal to raise the age for compulsory attendance at full-time day schools beyond fourteen without adopting the plan of paying maintenance allowances to parents in lieu of their children's earnings. And this plan they definitely condemn. The W.E.A. also advocate the age of fourteen for the present, but they would lay upon Local Authorities the duty of raising the age to fifteen within five years, and they advocate the payment of maintenance allowances. It may be taken, then, for the purposes of the present argument, that secondary education is that education given to pupils between the ages of fourteen and eighteen.

Before proceeding to Mr. Lewis's recommendations it will be well to consider what is already done in the way of education for adolescents of these ages. The figures supplied by the Board of Education show that very nearly 5 per cent. are educated in full-time secondary schools. To this may be

added another 5 per cent. (an outside estimate) for those children educated in secondary schools of which the Board have no cognizance. At the most, then, 10 per cent. of the children between the ages of fourteen and eighteen are receiving a continued education in daytime schools. Out of the remaining 90 per cent. it is found that 13 per cent. are enrolled for part-time evening courses. This figure of 13 per cent. is over-generous, because it is known that a large proportion of the enrolled students fail to complete the course. We are, therefore, left with a proportion of at least 77 per cent. of the adolescent population who come under no known educational influence except those of the workshop, the office, and the street.

#### THE DERELICT MAJORITY.

Public opinion is now ripe for proposals that the State should exercise control over the continued education of this derelict majority of at least 77 per cent. of the adolescents of the country. The existing voluntary agencies have not been able to cover the ground, or to persuade the child just freed from the discipline of compulsory attendance at school to come within their influence. Evening continuation schools, technical institutes, polytechnics, University colleges, great though their value is, affect a small proportion only. Apprenticeship and the education of the workshop have become, under modern industrial conditions, a source of incomplete training. Besides this, a large number of boys and girls enter what are known as "blind alley" employments, in which the training is very limited. The one and only remedy that the Committee find for the lamentable condition of affairs at present existing is compulsory part-time education for all adolescents. This is no new proposal. The need for it has been seen for many years. The quickening of national life that has come as a result of the War has now made it possible to carry out this proposal with the minimum of opposition. It is advocated alike by the W.E.A., by the Association of Directors and Secretaries for Education, by the Report of the Consultative Committee of 1909, and by the Royal Commission on Poor Laws. Similar proposals were included in the ill-fated Education Bill of 1911. Compulsion alone will meet the difficulties that will arise. If a scheme of local option were established, it is certain that the whole plan would fail. Both employers and parents would have a legitimate grievance from one of two points of view. Either they might feel that the earning hours of the children were unfairly curtailed in comparison with those in a neighbouring locality, or they might feel that their workpeople or their children were unfairly deprived of opportunities of becoming more useful and skilled.

The Committee feel quite certain that administrative compulsion is necessary to ensure the end they have in view; but they are equally certain that behind the administrative action there must be the driving force of a completely changed attitude on the part of the nation towards education. The remedy, they say, is a thoroughgoing one: "nothing less than a complete change of temper and outlook on the part of the people of this country as to what they mean, through the forces of industry and society, to make of their boys and girls." "Can the age of adolescence," they ask, "be brought out of the purview of economic exploitation and into that of the social conscience? Can the conception of the juvenile as primarily a little wage-earner be replaced by the conception of the juvenile as primarily the workman and the citizen in training? Can it be established that the educational purpose is to be the dominating one, without as well as within the school doors, during these formative years between twelve and eighteen? If not, clearly no remedies (they conclude) are possible in the absence of the will by which alone they could be rendered effective."

The only reply that can be given to the Committee's question is that a large number of people, representing all social grades, believe in the value of education, and that it is hoped that their belief will become sufficiently widespread to ensure the successful working of the Committee's proposals. At the present moment the W.E.A. holds the field as representing the desires and hopes of the working classes; but none know better than this Association itself that a vast mass of parents is untouched by its propaganda.

#### THE COMMITTEE'S PROPOSALS.

After establishing a uniform elementary-school leaving age of fourteen, and abolishing all exemptions, the Committee propose: "To require attendance for not less than eight hours a week, or 320 a year, at day continuation classes between the ages of fourteen and eighteen." When this proposal was published there was a loud wail of disappointment from some quarters. It was held that eight hours a week was a ludicrously inadequate proportion of time for continuation education. The proposal was not accompanied by any recommendation for a statutory limitation of the hours of labour, the Committee contenting themselves with an expression of approval of such action, but holding it to be without the scope of their report. The W.E.A. claim for education 800 hours a year, or not less than twenty hours a week, for (presumably) forty weeks in the year. This is practically the present official attendance for full-time day schools.

This Association also proposes to limit the hours of labour for all young persons under the age of eighteen to a maximum of twenty-five hours a week. The Association of Education Directors recommend that the total hours of labour and school attendance combined should not exceed forty-eight per week. The difference between the Committee and the W.E.A. is perhaps not of immediate importance. If the principle is once accepted that young persons up to the age of eighteen are under the control of the State, both as regards education and working hours, it will not be difficult to shorten the working hours and lengthen the hours given to education by degrees and as the necessary machinery can be gradually perfected.

It will be a great step forward when it is universally recognized that tired and sleepy adolescents, after a full day of labour, cannot usefully continue their education in evening classes. The new proposals do not go beyond the present practice of many wise firms of employers. The Committee propose that the continuation classes shall be held between the hours of 8 a.m. and 7 p.m.

The Committee amplify their proposals in the following paragraph, which is worth quoting:—

There are, of course, no substitutes for a sound early education, but such education, when it terminates at fourteen or even at fifteen, leaves the child with intellect and character still unformed at perhaps the most critical stage of his development, when both his mental and his physical life are at the maximum of instability. Some handrail is required over the bridge which crosses the perilous waters of adolescence, and it is this that a sound system of continuation classes may help to provide. We have asked ourselves [continue the Committee], and have asked others, whether the few hours a week, which is all that appears to us practicable at the present time to secure for education, will be of substantial value for the purpose in view of the numerous hours that will still remain available for the counteracting influences. We believe that the answer is in the affirmative. Many will feel that the system of half-time employment and half-time schooling, which has been put forward in some schemes of reform, approaches more nearly to a counsel of perfection. But we do not believe this to be at present attainable, and we are assured by experienced teachers that, if they are given something like eight hours a week during a continuous period of years from the time of leaving school, they will be able so to utilize those hours as to maintain that effective contact with the forces of civilization, which is at present in too many cases so soon broken. Even though the educational obligation may be a small one, it will still be sufficient to establish the principle that a child is no longer to be regarded as at once attaining, when he enters employment, to the fully independent status of wage-earning manhood. He will still be under authority and open to the influences of encouragement and reproof, of the corporate life and the offered ideals, which even more than mere instruction are of the essence of the educational process.

The paragraph concludes:

Over and above the four years' prolongation of formal education which they imply, we believe that compulsory continuation classes will carry on the moral and disciplinary influence of the elementary school, will increase the industrial efficiency of the mass of the population, and will give those able to profit by it full opportunity for the beginnings of a valuable technical training.

From the area of compulsion the Committee propose to exempt (1) all those who are receiving a full-time education, up to the age of sixteen at least, in a school approved by the Board of Education, a proposal that receives the support of

the Directors of Education; and (2) those who, however educated, have succeeded in passing the Matriculation examination of a British University. In this connexion the Committee think that "considerable freedom should be left for alternative methods of education, provided that any question as to the efficiency of these should be a matter for expert decision, which in the last resort must mean decision by the Board of Education." At the same time, the Committee would "strongly deprecate the establishment of privately controlled systems of continuation classes side by side with the public system." They therefore advise that exemption should only be given to those adolescents who can show that they have greater leisure, and can get something better than the public system can provide.

#### MAINTENANCE.

The W.E.A. have no hesitation in approving a system of grants to parents to make up for the loss of wages. Mr. Lewis's Committee disapprove of the system of maintenance grants, and, further, they believe them to be unnecessary. "We do not think," they say, "that employers as a body will desire to make specific reductions in wages on account of the few hours to be devoted to schooling. We do not think they ought to make such reductions. The incidental limitation of the supply of child labour will probably prevent them from making such reductions. The rapid effect of improved education upon the productivity of juveniles will leave them with little justification for making such reductions. We do not honestly think that parents need have much fear on this score."

#### COST.

Though it is nowhere definitely stated in the Committee's Report, it is assumed that the proposed compulsory continuation classes will be carried on without cost to the pupil or the parent or the employer. The State will bear the burden of the cost. The Committee state that in four years' time the gross cost of educating all children between the years of fourteen and eighteen in continuation classes may, perhaps, cost the country, in round figures, about ten millions a year. They do not attempt any close estimate, and they do not include the cost of providing buildings. The Treasury, now accustomed to think in hundreds of millions, is less likely to boggle at these figures than it would have been before the War. The Committee make no attempt to apportion the gross cost between the Exchequer and the localities; they content themselves with saying that the smaller the proportion added to the rates the less is the opposition of the rate-payers to be feared. The W.E.A. recommend that the State should pay 75 per cent. of the total cost; the Directors of Education, who are in close touch with the rate-payers, think that the State contribution should in no case be less than 50 per cent. of the total amount spent on education.

#### LEGISLATION.

The Committee urge that legislation should be introduced so as to bring about the proposed reforms at the earliest possible moment after the conclusion of the War. It is not to be expected that every locality could move with equal rapidity; but the "appointed day" could be postponed by administrative order when necessary. They appear to think that a very small amount of legislation is needed. It would probably suffice, they think, to amend Section 2 of the Act of 1902 so as to change the power of the Local Authority "to supply or aid the supply of education other than elementary" into a duty to make this provision, coupled with an obligation to submit to the Board of Education within a certain time a scheme for carrying out the new provisions in their area. It will also be necessary to cancel the clause limiting to twopence the amount to be raised from the rates for higher education.

In connexion with fresh legislation, notice must be taken of a movement to group counties into educational provinces. The argument is that the Board of Education cannot deal effectively with 319 Local Authorities; that these should be grouped into eight or nine provinces, each province to centre in a University; and that the Board should only deal directly with the Provincial Authority. Recently Lord Haldane expounded this proposal to the House of Lords. It has also been supported by the Reform Council. The inconveniences

and disadvantages of the proposal appear largely to outweigh its alleged value, and it does not seem likely to commend itself to the Legislature.

#### CURRICULUM.

A satisfactory curriculum can only be worked out after experience, and with the co-operation of those who have made a study of the science of education. The Committee lay down certain principles that will probably meet with general approval. In particular they advocate an extensive adoption of manual work in one form or another. "Education," say the Committee, "is a mental process, but the truth that for many children, especially those who will live by their hands, the best avenue to the mind is through the hands, has not yet worked its complete revolution in the pedagogic methods of the nineteenth century." This is sound doctrine, and the Committee's limitation of its application to those who will live by their hands might well be omitted. Again, the Committee say: "Manual work has long been recognized as a valuable medium of intellectual training."

As to the general aim of the proposed compulsory continuation classes, the Committee make their view plain in the following passage:

We need hardly say that we do not regard the object of establishing continuation classes as being merely an industrial one. The industries stand to benefit amply enough, both directly through the beginnings of technical instruction, and indirectly through the effect of education upon the character and general efficiency of those who come within its influence. But we are clear that the business of the classes is to do what they can in making a reasonable human being and a citizen, and that, if they do this, they will help to make a competent workman also.

#### RURAL EDUCATION.

The Report has some interesting passages on the subject of rural education. This, in the past, has been an admittedly weak spot in the educational system, and farmers have been credited, not without a show of reason, with an inability to appreciate the value of school learning. The opinion of the Committee as to the value of making two blades of grass grow in place of one has already been quoted. Speaking of country schools, the Committee say:

Both for boys and girls it will be both natural and right that the whole curriculum should relate itself to the rural atmosphere, just as it will relate to an artisan or a commercial atmosphere in a manufacturing town or a seaport. It is true that when they become adults, as we have already pointed out, many children brought up in villages will find their way to the towns. . . . We advocate no change in our methods of instruction which would unfit those who leave the country for town life, or which would in any way curtail their opportunities; far from it, we believe that these changes will make more useful citizens of the rising generation, and give them a wider and sounder outlook upon life.

The Committee hold that there ought to be an agricultural revival in England. To this end they urge that the country child ought to have no less good opportunities of education than the town child. "We are glad to find," they say, "that most of the agricultural witnesses who have appeared before us, while fully realizing the special difficulties that will attend progress in rural areas, hold firm to the faith in equality of educational conditions as the essential objective." Again: "Even among farmers there is a growing recognition of the advantage which agriculture may reap from improved education." As to the need of an agricultural revival, Mr. Christopher Turnor, who contributes a memorandum to the Report, says: "The land of the United Kingdom employs a million less men than it did sixty years ago; it employs per thousand acres only about one half the number employed in Germany and other countries.

#### GENERAL AIM.

Two more extracts must be cited to indicate the attitude of the Committee towards the subject of continued education:

Whilst one of the prime objects of the scheme is to increase the industrial efficiency of the workman, the education of the future citizen is even more important. Consequently the instruction provided must not be narrowly technical, but must develop the general powers of the mind. It is not, however, desirable to separate sharply technical instruction from general culture. The antithesis between the education of the workman and the education of the citizen has frequently been pressed too far. If the teaching is given on sound educational lines,

the process of acquiring technical knowledge becomes a good mental training; whilst the knowledge that enables a man to become an interested and intelligent co-operator in modern industry, instead of a mere tool, is in itself a valuable part of a good education for citizenship.

The second quotation shows that the Committee are alive to the investigations of modern educational science. After speaking of the period of adolescence as one in which boys are especially interested in mechanical contrivances and the wonders of Nature, they say :

Consequently a curriculum which has for its object the training of the future citizen, as well as of the efficient workman, must take account of the natural development of mind at this stage, and must give to the practical activities of boys and girls greater scope than is provided in the traditional curricula of the schools.

#### DETAILED SUGGESTIONS.

The Committee add to their Report a Memorandum of Suggestions on the subject of curriculum. They divide the four years of the continuation classes into two parts and deal first with the ages fourteen to sixteen. In their opinion the subjects of study during these two years should be mainly general, with some technical or vocational training added. As is made clear from earlier passages, the Committee mean by "vocational" what some writers prefer to call "environmental." In the second period, from the ages of sixteen to eighteen, they hold that the instruction should be mainly technical, but that the humanities should be continued.

#### FOURTEEN TO SIXTEEN.

They would place the children in three groups. In the first group come those who have adopted industrial, rural, or nautical occupations. The second group contains those who have entered commercial life. In the third group are placed those who do not belong to either of the other groups—in other words, those who have entered occupations often known by the name of "Blind Alley." This third group will, they hope, tend to grow smaller.

For these children they advocate a division of the hours between four subjects—English (which is a general term intended to include literature, history, and geography), Mathematics (which should include practical drawing). The third group is headed Manual and Scientific, and includes woodwork, metal work, gardening, mechanics, physics, cookery, needlework, dressmaking, millinery, and laundry. The fourth group, upon the value of which the Committee lay especial stress, is called Physical, and is taken to include a knowledge of hygiene as well as practice in bodily exercise. For the latter they follow Sir George Newman in advocating what is known as the Swedish system. "Experience during the War," say the Committee, "has shown, to a very marked extent, how seriously deficient are the bodily health and development of our boys and young men, and what great improvements can be effected under suitable training."

#### SIXTEEN TO EIGHTEEN.

After the age of sixteen the Committee advocate greater specialization, while maintaining a liberal basis of the humanities. They would divide adolescents into four groups. The first consists of those who have entered agriculture, engineering, mining, and the building or textile trades. The second group consists of those who have entered upon occupations connected with trade, transport, finance, and insurance. The third group consists of girls outside Groups 1 and 2; the fourth group of boys who are outside 1 and 2. For this last group, a diminishing quantity, as they hope, they recommend a continuation of the general course, including some manual occupation, calculation, vocal music, English, and physical training. For the corresponding group of girls, most of whom will probably be occupied later in household management, they recommend a course, including domestic and English subjects, household accounts, physical training, and vocal music.

There remain the two principal groups, industrial and commercial. For these they recommend a major and a minor course, each of which will be largely technical and definitely related to the occupation of the student.

#### EFFECT OF PROPOSALS.

It may be worth while to consider briefly some of the

effects of these proposals, if they are carried out, upon secondary schools and other existing educational agencies. In the first place, with regard to school fees. The continuation classes will be free. This will help to establish a principle in the minds of parents, and make them less inclined to pay secondary school fees. The W.E.A. advocate the abolition of fees in all secondary schools. Secondly, with regard to curriculum. If the value of manual work is proved by experience in these classes, it may be expected that the fact will react upon the curricula of secondary schools.

A certain class of educational institute stands to be very closely affected by the proposed change. The commercial college preparing for the lower grades of the Civil Service, and teaching shorthand and typewriting to junior clerks, may prove a competitor of the State system. This the Committee would deprecate, and they propose that while alternative schemes should be accepted, these should be shown to entail a substantially greater amount of daytime instruction than would be entailed by attendance at the ordinary classes, and that such alternative courses should be declared suitable by the Board of Education.

#### PRIVATE SCHOOLS.

Proprietors of private schools of all types may view these proposals with some anxiety. The control of the State creeps on, and the private school grows less frequent. Schools relying mainly or entirely on day pupils will certainly find an increase in the severity of State competition. Boarding schools will be less affected, and may yet continue for many years. At the same time, there is a good deal of educational opinion in favour of retaining the opportunities of private initiative in education. In the matter of continuation classes the Committee say that "a considerable freedom should, we think, be left for alternative methods of education"; but they add the proviso that the Board of Education should decide as to their efficiency.

#### EVENING SCHOOLS.

The effect of the new continuation classes on the existing evening schools will be most marked. The reader of the Report will naturally ask what is to become of them, and whether they are to be abolished. The answer of the Committee is admirable, as a quotation will show :

The continuation school, like the day school, ought to become a centre for the self-directed activities of its pupils, as well as for those imposed upon them, and its buildings should serve as a home for innumerable clubs, debates, study circles, concerts, and other forms of social gathering. In the evening, too, the serious instruction of the daytime may be supplemented by voluntary classes in recreative subjects for those who desire them.

In the summer there will be games, scoutcraft, swimming and the like. There will be quiet rooms for those who have no suitable home for the preparation of their class studies. Such a use of the evening schools is in accordance with the suggestions of the W.E.A. There will, of course, also be classes for those above the age of eighteen.

#### CONCLUSION.

The Report sums up what many people have been advocating for some years past. If the proposals contained in it are carried out, a great step forward will have been made in the work of providing sound educational opportunities for all who can profit by them.

"It is in the interest of the State," says the Association of Directors and Secretaries for Education "that no child or young person should be debarred by lack of means from the highest education of which it is capable." That view is now generally held by educational reformers; it receives support from the intelligent democracy of the country. As things are, the child in an elementary school, who at the age of twelve has failed to gain a Junior County Scholarship, may have no further chance of showing his fitness for education. Compulsory continuation schools would give a chance to every child. The times are ripe for the proposed change. The report carries conviction because every page is instinct with the desire to give the child the best opportunities possible, and it views education from the child's standpoint, which is the nation's standpoint, and not from the traditional standpoint of an official, administrative, Government Department.

## 450 MEDALS & PRIZES !!

### STUDENT'S ELEMENTARY

# BOOK-KEEPING

By **ARTHUR FIELDHOUSE, Accountant,**  
66 West Parade, Huddersfield,

who will forward copy **Index and Specimen Pages** on receipt of Post Card addressed to **Box A 27, Huddersfield.**

364 Pages. 21st Edition. Post Free, 2s.  
100 Exercises. 350 Questions.

Teacher's Specimen Copy, from Author only, 1s. 4d.

The **ONLY TEXTBOOK** to which there is a **FULL KEY.**

While this textbook more than covers all **Elementary Examinations** in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the **Society of Arts, West Riding County Council, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.**

The **Exercises** and the principles introduced therein are so carefully **graded** in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The **Questions** will be found very useful for testing the student's knowledge at each stage of his work. **Examination Papers** of the **Society of Arts, the W.R.C.C., and College of Preceptors** are included.

London: **SIMPKIN, MARSHALL, HAMILTON, KENT & Co., Ltd.**

**A LATIN LESSON.\***

Few schoolmasters recognize themselves in the pages of writers of fiction, though they may occasionally recognize a colleague. Schoolmasters view schools from the inside, and from the seats of the mighty. The inside knowledge possessed by the writer of fiction is often—not always—limited to points of view enjoyed by an occupant of the learner's bench. So far as we know, Mr. Rudyard Kipling has not been a schoolmaster. It was natural to view "Stalky & Co." with some distrust—a caricature was the general pronouncement. Yet a caricature may be more biting than a photograph.

We are reminded of "Stalky & Co." because in a recent volume, "A Diversity of Creatures," Mr. Kipling includes a sketch of school life which he calls "Regulus." He tells us expressly that "Regulus" was written in 1908; otherwise we might have thought that he had found a few forgotten pages of Stalky's school life. In "Regulus" we have the same setting and the same atmosphere as surrounded Beetle and his friends. The boys, rough but sound, understand silence better than pi-jaw. The masters cloak their enthusiasms and their affection for the boys in an almost impenetrable aloofness or in a shallow facetiousness. The incident described in "Regulus" is chiefly concerned with a lesson in Latin. It may possibly be meant as Mr. Kipling's contribution to the classics *versus* science controversy.

The scene is the Fifth Form Army Class. Enter Mr. King. "Aha!" he began, rubbing his hands. "Cras ingens iterabimus sequor." Our portion to-day is the Fifth Ode of the Third Book, I believe—concerning one Regulus, a gentleman. And how often have we been through it?"

"Twice, sir," said Malpass, head of the form.  
Mr. King shuddered. "Yes, twice, quite literally," he said. "To-day, with an eye to your army *viva voce* examinations—ugh!—I shall exact somewhat freer and more florid renditions. With feeling and comprehension, if that be possible. I expect"—here his eye swept the back benches—"our friend and companion, Beetle, from whom, now as always, I demand an absolutely literal translation." The form laughed subserenly.

"Spare his blushes! Beetle charms us first."

So Beetle, who is evidently meant to be one of the weaker

\* "A Diversity of Creatures." By Rudyard Kipling. (6s. Macmillan.)

brethren, stands up and begins to translate. He has a "guaranteed construe" given him by another boy, and so feels pretty safe.

This is how he begins :

"*Credidimus, we—believe—we have believed,*" he opened in hesitating, slow time—" *tonantem Jovem, thundering Jove—regnare, to reign—caelo, in heaven. Augustus, Augustus—habebitur, will be held or considered—praesens divus, a present God—adjectis Britannis, the Britons being added—imperio, to the Empire—gravibusque Persis, with the heavy—er, stern Persians.*"

"What?"

"The grave or stern Persians."

Beetle now prepares to sit down. But King says: "I am quite aware that the first stanza is about the extent of your knowledge; but continue, sweet one, continue."

Beetle accordingly continues.

"*Milesne Crassi, had—has the soldier of Crassus—vizit, lived—turpis maritus, a disgraceful husband—*"

"You slurred the quantity of the word after *turpis*," said King. "Let's hear it."

Beetle finishes his portion, and then asks:

"Shall I go on, sir?"

Mr. King winced. "No, thank you. You have indeed given us a translation!"

But King does not leave Beetle alone for long. This is how he addresses him after listening to a random reply:

"Guessing, Beetle, as usual, from the look of *delubris* that it bore some relation to *diluvium*, or deluge, you imparted the result of your half-baked lucubrations to Winton, who seems to have been lost enough to have accepted it. Observing next your companion's fall, from the presumed security of your undistinguished position in the rearguard, you took another pot-shot. The turbid chaos of your mind threw up some memory of the word 'dilapidations,' which you have pitifully attempted to disguise under the synonym of 'ruins.'"

Later in the lesson a boy called Vernon makes a mistake that arouses King's wrath. He says:

"So far as in me lies, I will strive to bring home to you, Vernon, the fact that there exist in Latin a few pitiful rules of grammar, of syntax—nay, even of declension, which were not created for your inculcated sport—your Boeotian diversion. You will therefore, Vernon, write out and bring me to-morrow a word-for-word English-Latin translation of the Ode, together with a list of all adjectives—an adjective is not a verb, Vernon, as the Lower Third will tell you—all adjectives, their number, case, and gender. . . ."

"I—I'm very sorry, sir," stammered Vernon.

"You mistake the symptoms, Vernon. You are possibly discomfited by the imposition; but sorrow postulates some sort of mind, intellect, *nous*. Your rendering of *probrosis* alone stamps you as lower than the beasts of the field."

This imposition, which appears to have taken some time to set, was subsequently remitted, because Vernon made an apposite Latin quotation when fumes from the science room began to scent the air.

Winton, one of the better scholars, now takes the field.

"And hastened away," said Winton, "surrounded by his mourning friends, into—into illustrious banishment. But I got that out of Conington, sir," he added in one conscientious breath.

"I am aware. The master generally knows his ass's crib, though I acquit you of any intention that way. Can you suggest anything for *egregius exul*? Only 'egregious exile'? I fear 'egregious' is a good word ruined. No! You can't in this case improve on Conington. Now, then, for 'atqui sciebat quae sibi barbarus tortor pararet.' The whole force of it lies in the *atqui*."

"Although he knew," Winton suggested.

"Stronger than that, I think."

"He who knew well," Malpass interpolated.

"Ye-es. 'Well though he knew.' I don't like Conington's 'well witting.' It's Wardour Street."

"Well though he knew what the savage torturer was—was getting ready for him," said Winton.

"Ye-es. 'Had in store for him.'"

"Yet he brushed aside his kinsmen and the people delaying his return."

"Ye-es; but then how do you render *obstantes*?"

"If it's a free translation, mightn't *obstantes* and *morantem* come to about the same thing, sir?"

"Nothing comes to 'about the same thing' with Horace, Winton. As I have said, Horace was not a journalist."

In an article in the *English Review* Sir Henry Newbolt pleads for more spirit in the Latin lesson. More of the soul of literature and less of the science of words. Assuming that Kipling's "caricature" has a sound basis, it may be asked how much literature the form had tasted up to this moment. King is talking most of the time. He does not let even Winton translate a dozen words without interrupting, suggesting, correcting. King, in a way, is enjoying himself. He is in the sun. Of the rest, one is trying to turn a Latin poem into English, a word or two at a time, intermittently, as King's occasional silences allow, his mind concentrated on syntax; a few are probably listening; Beetle is undoubtedly digging into the desk with his pocket knife.

One is inclined to wonder if these boys ever read the entire Ode either in English or Latin. Yet King is a scholar, and enjoys the classics above all literature. In these days much is heard about the free expression of individuality. King, a ripe scholar, whom even Virgil rouses to enthusiasm, is condemned to spend his days in a school standing alone in the country. He has no society; no intellectual equals outside his colleagues to whom he can express himself. He dare not let himself go to the boys, partly for fear of showing an enthusiastic love of literature that might seem to them ridiculous, and partly for fear of examinations. "Regulus," says King, "which (your examiners won't ask you this, so you needn't take notes) was a sort of God-forsaken Manchester."

Going back to the lesson—King discusses the passage further, and then annoys Beetle by asking him for a translation of *tendens*, a word "which is utterly untranslatable." The fumes intruding from the science room give rise to two pages more of talk before King "headed them back to Regulus."

According to the story, King's conversation occupies the greater part of the lesson, and most of the talk concerns neither Horace nor the Latin tongue.

In the afternoon a rough-and-tumble happened to take place among our heroes. King was a chance witness.

"Oh," said King, "'Dimovit obstantes propinquos.' You, I presume, are the *populus* delaying Winton's return to—Mullins, eh?"

"No, sir," said Stalky behind his claret-coloured handkerchief. "We're the *maerentes amicos*."

"Not bad! You see, some of it sticks, after all," King chuckled to Hartopp (the science master). King had promised his form to have it out with Mr. Hartopp about the fumes. They are naturally led to discuss the value of their respective subjects.

"To go back to what we were discussing," said King quickly, "do you pretend that your modern system of inculcating unrelated facts about chlorine, for instance, all of which may be proved fallacies by the time the boys grow up, can have any real bearing on education—even the low type of it that examiners expect?"

"I maintain nothing. But is it any worse than your Chinese reiteration of uncomprehended syllables in a dead tongue?"

"Dead, forsooth!" King fairly danced. "The only living tongue on earth! Chinese! On my word, Hartopp!"

"And at the end of seven years—how often have I said it?" Hartopp went on—"seven years of two hundred and twenty days of six hours each, your victims go away with nothing—absolutely nothing, except, perhaps, if they have been very attentive, a dozen—no, I'll grant you twenty—one score—of totally unrelated Latin tags, which any child of twelve could have absorbed in two terms."

"But—but can't you realize that if our system brings later—at any rate—at a pinch—a simple understanding—grammar and Latinity apart—a mere glimpse of the significance (foul word!) of, we'll say, one ode of Horace, one twenty lines of Virgil, we've got what we poor devils of ushers are striving after?"

"And what might that be?"

"Balance, proportion, perspective—life."

This article is not written to support one side or the other in the scientific-humanistic fight. Science, or knowledge, is, in our opinion, as necessary as literature, or thought. Neither is it really possible to teach one entirely to the exclusion of the

other, though the one may unwisely preponderate. The suggestion of the writer of the article is that if there is any truth in Kipling's sketch it is time to take thought as to what we are teaching, how we are teaching it, and why. King's contention that he teaches Latin to his whole form, day in and day out, in order that one or two individuals may read Horace with enjoyment, does not convince us that he is doing the best for the remainder.

## THE COLLEGE OF PRECEPTORS.

### MEETINGS OF THE COUNCIL.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 12th of May, 1917. Present: Sir Philip Magnus, President, in the chair; Prof. Adams, the Rev. F. W. Aveling, Mr. Bain, Mr. Bayley, the Rev. J. O. Bevan, Mr. Holland, Miss Lawford, Mr. Longsdon, Mr. Ritchie, Mr. Roscoe, Mr. Rushbrooke, Mr. Somerville, the Rev. Canon Swallow, and Mr. Whitbread.

Sir Philip Magnus was re-elected President of the Council. Prof. John Adams, Mr. R. F. Charles, and Mr. J. F. P. Rawlinson were re-elected Vice-Presidents of the Council.

Mr. Rushbrooke was re-appointed Dean of the College, and Dr. Armitage-Smith Treasurer of the College.

The Moderators, Examiners, Inspectors, and Revisers for the year ending in May 1918 were appointed.

In response to the invitation of the Entente Committee of the Royal Society of Literature, Prof. John Adams was appointed the representative of the College at a Conference to be held on the 1st of June for the purpose of discussing proposals for furthering the objects of the Entente Committee.

Dr. F. A. Sibly was re-elected a member of the Council.

The following resolution was adopted:—

That the Council of the College of Preceptors affirms its strong conviction that monetary or other aid granted to young persons on the condition of their undertaking to become teachers tends to lower the status of teaching work. In this connexion the Council especially deprecates the proposal of the London County Council Education Committee to the effect that children of ten years of age are to receive scholarships on condition that they undertake, through their parents or guardians, to become teachers in public elementary schools in London. Such an undertaking cannot ensure that the recipient of the bounty will be bound to become a teacher.

Mr. W. J. Merridan, A.C.P., Royal Normal College, Upper Norwood, S.E., was elected a member of the College.

The following books had been presented to the College since the last meeting of the Council:—

By the CAMBRIDGE UNIVERSITY PRESS.—Tucker and Wallace's English Grammar.

By the GENERAL MEDICAL COUNCIL.—Minutes of the Medical Council, 1916; Index to Minutes of the Medical Council, 1903-1916. Register of Veterinary Surgeons, 1917.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 27th of June, 1917. Present: Mr. Rawlinson, Vice-President, in the chair; Dr. Armitage-Smith, Mr. Bain, Mr. Barlet, the Rev. J. O. Bevan, Mr. Brown, Mr. F. Charles, Mrs. Felkin, Miss Frodsham, Mr. Hardie, Miss Lawford, the Rev. R. Lee, Mr. Millar Inglis, Mr. Morgan, Miss Punnett, Mr. Roscoe, Mr. Rushbrooke, the Rev. C. J. Smith, Mr. Starbuck, Mr. Thornton, Mr. Vincent, and Mr. Whitbread.

The following resolution was unanimously adopted:—

That the congratulations of the Council be offered to the President, Sir Philip Magnus, on the new dignity of Baronet which has been conferred upon him.

The Secretary reported that he had received from the Rev. H. A. Soames £50 2½ per cent. Consols for the purpose of providing an additional prize for Scripture History.

Prof. John Adams was appointed to deliver the next course of twelve lectures on "The Practice of Teaching."

Mr. T. H. Bowtell was appointed a Reviser in Commercial Subjects.

Mr. Hay and Mr. Wagstaff were re-elected members of the Council. Mr. S. Gregory Taylor was elected a member of the

Council, to fill the place rendered vacant by the resignation of the Rev. J. B. Blomfield.

The Council considered the Board of Education's Circulars 996 and 1002, and adopted the following resolutions:—

(a) That the Council take action to procure more adequate representation of teachers in general, and in particular to secure the direct representation of the College, on the Secondary School Examinations Council.

(b) That the Council of the College of Preceptors is of opinion that teachers, in common with members of other professions, should have the fullest possible measure of freedom and independence in their work.

(c) That secondary-school examinations should be mainly regulated and controlled by school teachers or their representatives.

On the recommendation of the Finance Committee, a grant of £20 was made to a life member of the College.

On the recommendation of the Examination Committee, the Council expressed their willingness to make suitable arrangements for the examination of British prisoners of war interned in enemy or neutral countries.

The Secretary submitted a report on the meeting which was convened by the Entente Committee of the Royal Society of Literature for the purpose of discussing M. de Croze's proposal to make provision for performances of French classical plays at Universities and schools in the British Isles. The meeting had appointed a Committee to take provisional charge of the movement, which it was intended should ultimately be placed under the control of an association of subscribers. The movement was assured of substantial support, and a large number of head masters of public schools had promised to join the Association.

The following books had been presented to the College since the last Meeting of the Council:—

By the AUTHOR.—Patterson's Language-Student's Manual. By the CAMBRIDGE UNIVERSITY PRESS.—Lobban's Shakespeare's Coriolanus, and Shakespeare's King Henry V; Peskett's Livy XXIII; Postgate's Lucan De Bello Civili VIII.

By MACMILLAN & CO.—Fowler's First Book of English Prose for Repetition; Macardle's Selections from Malory's Le Morte d'Arthur; Malim's Njal and Gunnar.

By the OXFORD UNIVERSITY PRESS.—Bartholomew's Advanced Atlas of Physical and Political Geography; Davies's Modern Language Teaching in German Secondary Schools; Forbes's Second Russian Book; Lamborn's Rudiments of Criticism; Oxford Russian Plain Texts (Tolstoy's A Prisoner of the Caucasus, and Turgenev's Pegasus, Biryuk, and Forest and Steppe).

By the UNIVERSITY TUTORIAL PRESS.—Hutchinson's Advanced Textbook of Magnetism and Electricity, Vols. I and II; Weekes's Johnson's Life of Pope.

The Medical Register, 1917.  
The Dentists' Register, 1917.

## BOARD OF EDUCATION.

### CIRCULAR TO LOCAL EDUCATION AUTHORITIES AND SECONDARY SCHOOLS.

CIRCULAR 996.

#### EXAMINATION OF SECONDARY SCHOOLS.

1. IN a Circular (No. 933) issued to Local Education Authorities and secondary schools in December 1915 the Board recorded the stage then reached in the preparation of their plan for the improvement of secondary school examinations. They further announced that it would not be possible to proceed at once with the plan as a whole. They are now, however, able to take up the matter again, and the following steps will accordingly be taken to bring their scheme into operation on August 1, 1917.

2. From that date the Board will undertake the functions and responsibilities of a Co-ordinating Authority for Secondary School Examinations, with the assistance of a body of persons to be called "The Secondary School Examinations Council."

3. The main functions of this Council, which are more fully specified below, will be of a technical character requiring considerable experience of the practical working of examinations, and of the conditions which must be fulfilled if the certificates of approved examining bodies are to be generally accepted as evidence of the attainment of an adequate standard of general and advanced secondary education. For this purpose it is

desirable that the Council should not be too large for close discussion and prompt decision, and that the approved examining bodies should be represented on it.

The Board are, however, fully aware that there are, or may be, important interests which should be consulted from time to time, even though it may not be practicable to give to all of them a direct representation on the Council. In the case of the organized professions the Board suggest that a Standing Committee should be formed which would nominate a member of the Council, and would have still greater importance and value as being available for consultation and conference with the Council as occasion arose. The Board would welcome the formation of similar Standing Committees by other organizations which might be interested in the Council's work, e.g. Chambers of Commerce.

4. The Council will consist of eighteen persons, and will, in the first instance, be constituted as follows:—

To be appointed by—

Part I.—

The Oxford and Cambridge Schools Examination Board ... ..	1
The Oxford Delegacy for Local Examinations ...	1
The Cambridge Syndicate for Local Examinations ... ..	1
Bristol University ... ..	1
Durham University ... ..	1
London University ... ..	1
Northern Universities Joint Matriculation Board	3

Part II.—

The County Councils Association... ..	2
The Municipal Corporations Association ... ..	2
The Teachers Registration Council ... ..	4
Standing Committee of Professional Bodies ... ..	1

18

The President of the Board of Education will in the first instance appoint a chairman from outside the Council.

5. Men and women will be alike eligible. One-third of the members will retire annually, and will be eligible for re-appointment. If any of the bodies named in Part I of the above list is not approved, or ceases to be approved, as an examining body, its representation on the Council shall cease.

The Board of Education will be represented at the Council meetings by such of their officers as the nature of the work may require. These officers will attend as assessors, with the right to speak but not to vote.

Accommodation and secretarial and clerical assistance will be provided by the Board, and travelling expenses, &c., will be allowed to the members.

6. It is intended that the Council shall be established on August 1, 1917, and from that date all matters falling within the functions of the Co-ordinating Authority shall stand referred to it.

7. The Council will be entrusted by the Board with the responsibility for conducting on their behalf as Co-ordinating Authority all ordinary business, correspondence, and Conferences connected with the co-ordination of examinations; but they will consult the Board before committing themselves on questions of principle or policy which are controversial or specially important. Officers of the Board who attend meetings of the Council as assessors may request the Council to refer any such question to the Board.

8. The first duty of the Council will be to consider the approval of examining bodies. In making their recommendations to the Board with regard to such applications the Council will proceed on the general lines laid down in Circular 849, and summarized in paragraph 2 of Circular 933, as modified by paragraphs 8 and 9 of the latter Circular.

9. The Council will, subject to the provisions of paragraph 7 of this Circular, deal with the following matters:—

- (a) The maintenance by each approved examining body of an adequate standard both for a pass in the examination and for a pass with credit;
- (b) Investigation of complaints made by School Authorities with regard to examinations;
- (c) Promotion of Conferences with examining bodies and others as occasion arises;
- (d) The form and contents of the certificates issued on the result of the examinations;

(e) Negotiations with Universities and professional bodies for the acceptance of the examination certificates as exempting the holders from certain other examinations.

10. The Council will also be at liberty to submit to the Co-ordinating Authority from time to time suggestions for the improvement of the scheme of examinations, especially with the view of keeping the examinations in touch with the development of new studies and methods in the schools.

11. The Council will present annually to the Co-ordinating Authority a report of its proceedings in the exercise of the functions assigned to it, which will be published by the Board.

#### FINANCE.

12. In order that the new system of examinations may not impose a new financial burden on School Authorities, the Board propose to pay to each school on the Grant List taking an approved examination an additional grant not exceeding £2 on each pupil examined as a member of a form submitted to the first examination with the Board's approval, and on each pupil submitted to the second examination.

The Board reserve power to withhold or reduce the grant in certain cases, as, for instance, where a pupil is submitted to the first examination more than once, or is submitted to the second examination prematurely.

L. A. SELBY-BIGGE.

### SCHEME FOR THE BETTER ORGANIZATION OF EXAMINATIONS IN SECONDARY SCHOOLS.

#### CIRCULAR 1002.

1. This scheme is designed for the examination of pupils in secondary schools recognized by the Board of Education as efficient, but provision is to be made for the admission of other candidates under the age of nineteen years.

2. The Universities will supply the responsible bodies through which the examinations will normally be conducted, but it may be found desirable in some cases that, for the purpose of examinations in such subjects as music, drawing, and manual instruction, special examining bodies should be approved.

3. In order to secure the necessary equality of standard and the acceptance of the examination certificates by University and professional bodies as exempting the holders from certain other examinations, and to provide machinery for enabling the scheme to be improved from time to time, the Board of Education will act as a Co-ordinating Authority with the help of a Secondary School Examinations Council comprising representatives of the Universities, teachers, Local Education Authorities, and professional bodies.

4. All matters falling within the functions of the Co-ordinating Authority will stand referred to the Council, which will be entrusted by the Board with the responsibility for conducting on their behalf all ordinary business correspondence and conferences connected with the co-ordination of examinations. The Council will consult the Board before committing themselves on questions of principle or policy which are controversial or specially important. Officers of the Board who attend meetings of the Council as assessors may request the Council to refer any such question to the Board. Subject as above, the Council will deal with the following matters:—

- (a) The recommendation of examining bodies for approval by the Co-ordinating Authority.
- (b) The maintenance by each approved examining body of an adequate standard both for a pass in the examinations and for a Pass with credit.
- (c) Investigation of complaints made by school authorities with regard to examinations.
- (d) Promotion of conferences with examining bodies and others as occasion arises.
- (e) The form and contents of the certificates granted on the result of the examinations and the arrangements for their issue.
- (f) Negotiations with Universities and professional bodies for the acceptance of the examination certificates as exempting the holders from certain other examinations.

5. The Council will be at liberty to submit suggestions to the co-ordinating authority for the improvement of the scheme of examinations, and will make an annual report of its proceedings in the exercise of the functions assigned to it.

6. Examination schemes submitted to the co-ordinating authority for approval must fulfil the following conditions:—

(a) Adequate provision must be made for bringing teachers in the schools into touch with the examining body by means of representation on the examining body or of some system of regular consultation.

(b) Provision must be made for examining a school on its own syllabus if it so desires, unless in the opinion of the examining body (subject, in case of dispute, to the decision of the Examinations Council) the syllabus is inadequate in scope or character.

(c) Head masters and head mistresses must be required to submit to the examining body their estimate of the merits of candidates from their schools in each of the subjects offered by them for examination, to be taken into account in the award of certificates under the scheme.

7. Only two examinations will be recognized for schools, one suitable for pupils about the age of sixteen, and one for those about two years older.

8. (a) The first examination will be designed to test the results of the course of general education before the pupil begins such a degree of specialization as is suitable for advanced work in secondary schools.

(b) Schools taking the first examination will be required to present a form or forms as a whole, and not individual pupils.

(c) The condition of passing will be that candidates shall have reached the required standard in the three main groups of school subjects, viz. English subjects, foreign languages, and mathematics and science.

Provision should be made for experiments directed to bringing subjects such as music, drawing, and manual instruction within the scope of the examination, and for enabling them to count under suitable conditions towards the attainment of a certificate.

(d) The group of subjects, and not individual subjects, will be the unit in respect of which success or failure will be determined.

(e) The standard should be such that a pass with credit would entitle a candidate to admission to a University, and a slightly lower standard should be accepted for an ordinary Pass.

9. The second examination will assume that the candidate has, after the stage marked by the first examination, followed a more specialized course on the lines indicated in Chapter VIII of the Regulations for Secondary Schools.

10. Subject to the exercises in particular cases of the Board's discretion under Article 35 of their Regulations for Secondary Schools, schools will not be required as a condition of recognition for grants to take either examination, but no school will be allowed to arrange its organization or curriculum or that of any particular form for the purpose of preparing any pupils or form for any examination which is not approved by the Board.

11. Certificates respectively appropriate to candidates who have and have not received their previous education in secondary schools recognized by the Board as efficient will be granted on the result of the examinations. The form of the certificates and the arrangements for their issue will be approved by the co-ordinating authority.

L. A. SELBY-BIGGE.

MISS A. C. P. LUNN (Classical Tripos, Girton College, Cambridge), at present Head Mistress of Brighton and Hove High School, has been appointed by the Council of the Girls' Public Day School Trust Head Mistress of Sheffield High School; and Miss A. S. Barratt, at present H.M. Inspector of Secondary Schools and formerly Head Mistress of East Liverpool High School, has been appointed Head Mistress of Brighton and Hove High School.

A FRENCH Holiday Course, similar to that held last year, will be held, at the request of the Board of Education, at Bedford College from August 24 to September 6. Particulars from Miss Batchelor, Bedford College, Regent's Park, N.W. 1.

## ESPERANTO.

[FROM A CORRESPONDENT.]

AMONG the many educational questions now under discussion by those who see the necessity of preparation for peace, none is perhaps of greater importance than that of language study. It seems advisable, therefore, at this time, when we are examining ideas and methods with a new interest and from new points of view, that the claims of Esperanto should be seriously considered by all.

The War has given an immense force to these claims. It has shown the great need of a simple, yet exact, medium of international communication. The vast majority of us are helpless in our intercourse with some of our Allies (e.g. Flemish, Belgian, Russia, Serbia); moreover, it would be overstating the case to say that most of us could even speak French fluently. Had Esperanto been generally known, it would have been an inestimable boon to the Allies; in combined operations of armies using such a variety of languages the lack of this common medium may lead to mistakes at a critical moment, to needless uncertainty and anxiety, to suffering and needless loss of life, and also to friction between co-operating units which results in decrease of cohesion and efficiency. In Esperanto we have ready to hand a neutral, international language which can be used for simple correspondence after even a few hours' study, while people can make themselves intelligible in conversation in a few weeks: days will suffice for mere essential ideas. It possesses a rich vocabulary, and is at the same time so accurate that ambiguity of meaning is practically impossible. It is so easy to acquire a working knowledge of the language that even the distribution of the tiny "Keys" (published in all important languages) to the officers and to the more intelligent men of the allied armies has removed, where this has been done, most of the language difficulties now experienced. Actual instances are to hand.

The efficiency of the language has been proved beyond doubt by nine great International Congresses, at which people of all countries have met, and held public discussions and private conversations in Esperanto with perfect ease and freedom. This practical experience and, in general, the successful use of Esperanto during a quarter of a century in all kinds of international intercourse, is a sufficiently conclusive proof of its worth. The testimonies of many men whose opinions are of weight might also be quoted, for Esperanto has won the favourable judgment and support of some of the most eminent public men, such as H.R.H. the Duke of Connaught, the late Prof. Mayor, of Cambridge, who learnt Esperanto when he was eighty years of age, and spoke it at the Congress; Prof. Gilbert Murray, Prof. Skeat, Sir Wm. Ramsay, Leo Tolstoy, and others. The language is steadily gaining acceptance among progressive peoples. In England the New Testament has been published in Esperanto, while the Old Testament will be ready for publication after the War. Striking testimonies have come to hand in favour of the use of Esperanto in the mission field.

Apart from the economy and convenience that would result from the universal use of Esperanto for international intercourse, it would be a factor of great importance in the cultivation of that mutual understanding and friendship between nations which greatly helps in the preservation of peace. At present, of course, this is only a matter of importance for us in regard to the Allies and neutrals. After the War, Esperanto will be needed in the readjustment of commercial, literary, and scientific relations among all the nations, and it can be of great service now to the cause of righteousness in the promotion of mutual understanding, sympathy, and consequent unity among the Allies.

A very interesting experiment is being made in the Green Lane Council School, Patricroft, Eccles. In this school two hundred children are being taught Esperanto. After a few weeks these youngsters were able to converse with their teachers and with each other, and are now in the habit of corresponding with children in various parts of the world. Their keenness is astonishing. If other boys and girls will but follow their lead, the international language question will be solved with ease.

## REVIEWS.

*Higher Education and the War.* By John Burnet.  
(4s. 6d. net. Macmillan.)

Certain lectures delivered by Prof. Burnet for the St. Andrews Provincial Committee form the basis of this book, and its author takes a pardonable pride in mentioning that his criticisms of German education were published in May 1913, and have therefore not been unduly influenced by the present War. The book bears traces of its origin in lecture form, and cannot be said to make a unity. But the information conveyed is of such importance at the present time, and the style of presentation is so vigorous and attractive, that everyone who has a genuine interest in education will welcome the volume as one of the very best that has appeared within recent years. It is true that Prof. Burnet's love of epigram sometimes carries him further than cold facts warrant. For example, there are those who will decline to "remember that the original meaning of *universitas* was 'trades union.'" But there is just enough truth in his suggestion to make it worth the reader's while to look further into it, which, no doubt, is exactly what our author desired. In the deadly flat plateau of educational writing we welcome all forms of intellectual sprightliness. Less pardonable is the attempt to settle the vital problem of formal training as a mere side issue in a chapter of a small book like this. Even a man of the acknowledged brilliancy and versatility of Prof. Burnet cannot dispose of an important subject in this way with his left hand. It deserves his full attention or his respectful neglect.

The real subject of the book is German higher education and its lessons and warnings for us: its treatment is all that could be desired. Our author not only knows all about German education, but all about our misconceptions about it. Every educational administrator and every member of a Committee for educational reform ought to read the book. There they will find an enormous number of fallacies exposed—fallacies that are all too widely current among the groups referred to. The book could have stood the addition of one other chapter, in order to inform the public of the present state of the continuation school system in Germany, since, in view of the imminent improvements in our plan, we need all the help we can get from outside experience. But it is ill complaining of lack when we ought to be full of gratitude for the valuable help we get from what the book actually provides. It is far from being a mere exposition of the German system. It wisely makes sure that, in the first place, its readers get all the necessary information, but then it takes care that the facts presented are properly correlated with our own system of education. Prof. Burnet is a severe critic both of our scheme and the German, but it is delightful to find that on the balance we have more cause to be pleased than depressed by the contrast between the two. We, at least, have no *Schulelend* problem: no need for public meetings to deal with school suicides. The relations between parents and teachers in England may not be of the most cordial, but are certainly not of the permanently strained kind that is normal in the Fatherland. The great value of this book is that it not only sets forth sound views, but supports them by bringing the reader face to face with the actual facts of the case in Germany. It is long since we have read a book that brings such well founded comfort to those who are eager for our educational future.

Prof. Burnet takes up a brief for the "college" system as developed in America. The college period, he maintains, corresponds to the old faculty of arts period. Probably he attaches more importance to this part of his argument than will the great majority of his readers. He should remember that, after all, the Scotch Universities do not greatly interest the wider English-speaking public to whom his book makes its appeal. But, used as an illustration, his treatment of the Scotch faculty of arts provides valuable material for forming a judgment regarding the stage at which school work should end and University work begin. Prof. Burnet will certainly carry most University people with him in his contentions.

One would like to quote copiously from this stimulating volume. Few books that have passed through our hands have called for so many marks to indicate interesting and provocative passages. But, since our space is exhausted, we cannot

cite them, and must content ourselves with urging our readers to make a point—even at personal inconvenience if need be—of getting the book and reading it for themselves. They will find it emphatically worth while.

*The Compleat Schoolmarm.* A Story of Promise and Fulfillment. By Helen Hamilton. (2s. net. Oxford: Blackwell.)

Every high-school mistress who reads this little book will thrill with the satisfaction of seeing on its pages precisely her own views and feelings expressed with cutting truth and at the same time with kindly sympathy. The heroine of the story—by the way, the intending reader must be warned not to expect a novel, as "Helen Hamilton" tells the story in versified prose—is shown us at school, at the University, an assistant teacher, and a Head Mistress. With the last title we are bound to put capitals, so great is the awe she inspires. The story is addressed to

You driven, anxious, hurrying women,  
Always tired,  
And starved of life,  
Who teach children,  
Other women's,  
And of love know nothing.

Some girls become teachers for one reason or another:

And others yet caught young,  
Held fast by the machine,  
So pitiless, of education,  
And broken, shaped, and moulded  
Exactly to its will.

And what is the teacher to do?

You take the immature young things  
Committed to your expert hands,  
And give them all your thoughts and care,  
Selfless, devoted thought and care,  
To make them, meaning quite the best,  
Exact replicas of yourselves.

There is probably no weakness in the high-school system of education that has escaped the notice of this acute observer. Too strenuous work, glorification of the individual, comparative unimportance of home, inferiority of parents, rough and over-tiring games, sentimental attachments—these come in the school education of the heroine. At college, more hurry, more over-pressure, complete crushing out of human interests. As teacher, devotion to school, underfeeding, exercise correcting, adoration of head mistress, self-importance:

But first the joy,  
The thrilling joy  
Of "pi-jaw,"

You love to give them.

The self-importance naturally grows when the heroine becomes head mistress:

In truth you are the perfect H. M.,  
Positive, opinionated,  
Tirelessly energetic,  
Filled with missionary zeal;  
Narrow, parochial, unperceptive,  
Self-sufficient and complacent,  
Antagonistic to ideas  
When emanating from the brain  
Of unscholastic folk.

In a rough sketch, with colours perhaps a little crudely mixed, the author gives us a picture, as true in its way as the more finished study, "Regiment of Women." It is not all bitterness; she sees and understands the good points; but it is the bad points we need to change. And change becomes possible when the victims realize their chains. Can one conceive of a boys' school where all the masters are bachelors?

"Moral Training."—(1) *God Saw that it was Good.* By Mrs. House. Accompanied by four leaflets: *The Gift of Life, The Temples of Life (Girls), The Temples of Life (Boys), The Meaning of Love.* (The set, 5d., or 4s. a dozen. The National League for Physical Education.) (2) *Canterbury Leaflets for Parents.* Sex Instruction given in the Simplest Language. (The set, 2d., or 1s. 6d. a dozen. The

White Cross League.) (3) *Staying the Plague*. By N. Bishop Harman. (1s. net. Methuen.)

Every publication that deals earnestly and sincerely with the knowledge of the body may be welcomed. The conspiracy of silence, as it is called, has prevailed for so long that many and repeated utterances are needed to break it. The great difficulty that the mother feels is a want of the right vocabulary to use in explaining the functions of the body to little ones. Every book on the subject that she reads helps to do away with the difficulty, and to familiarize her with the right words. We speak here of the mother, for little can be hoped in this direction from the father. The books before us agree on one point. They urge alike that there need be no shame in speaking of the facts of life. The very urgency with which this plea is reiterated indicates how deep-rooted this feeling of shame is. Most men know that there are feelings of shame associated with sex, and therefore they are apt to feel ashamed in speaking of the facts. Yet no one who has spoken simply and directly to young children on these matters can help being struck by the simplicity and directness with which children receive the information. The main point, it seems to us, is to satisfy curiosity in young children as it arises, but not to stimulate it. If to a child's first questions an unsatisfying or untrue answer is given, the child ceases to ask questions from its mother, but may not cease to puzzle and think. Almost every one is now agreed that the facts of parentage should be taught at suitable ages. Not only may harm be done by underground inquiry and inward worrying, but if the knowledge is not given by those who can give it adequately it is likely to be acquired in a mutilated form connected with unpleasant associations.

Mrs. House writes a useful address to parents, which deserves careful study. The first leaflet is to be read aloud to young children. The second is meant to be read to boys of from twelve to fourteen years of age. The third to girls from eleven to thirteen. The fourth is for older boys and girls. Mrs. House writes delicately, perhaps too delicately. But it is not always easy to put into print the exact words one would use in a talk of this character. The leaflets may well suggest to mothers the line they should take, and each can modify it according to the needs.

The Canterbury Leaflets are circulated with the sanction of the Archbishop, and are expressly intended in the main for parents and teachers of "the masses." There are six leaflets in all: for parents, and for children at different ages. They will do good; and yet we could wish they were more outspoken and direct, and less involved in Biblical phraseology. The knowledge required is as necessary as the knowledge how to clean the teeth or blow the nose—actions that have to be taught. It is confusing to mix it up with religious dogma.

Dr. Harman addresses adults, and not children. His book is based on the findings of the Royal Commission on Venereal Diseases. The price is low, and it should be widely read. It is most important that parents and teachers should understand and be able to speak without false shame of a disease that can only be abolished by publicity.

*Shantiniketan*. By W. W. Pearson. (4s. 6d. net. Macmillan.)

Sir Rabindranath Tagore has established a school, attended by about 150 boys, at Bolpur, about one hundred miles from Calcutta. The name of this institution is "Shantiniketan," which, we gather, means "House of Peace." This book of 111 pages contains: (a) a two-page poem by Tagore; (b) a prose introduction by Tagore; (c) a description of the school, by W. W. Pearson; (d) a story called "The Gift to the Guru," running to about forty pages, and written by one of Tagore's assistants, named Satish Chandra Roy; (e) four pages of notes of an address on "Paradise," delivered to Japanese students at Tokyo by Tagore; (f) four pages on "Parting," by Tagore.

Honestly, we do not understand why this unwholesomely distended booklet should have been published. No doubt the name of the Indian poet will command a certain amount of attention, but whatever value the book may have must consist in its poetical appeal. It contains nothing of educational value. The description of the school is dreary in the extreme, and is written in that style of artificial simplicity that favours sleep. There is too much about "the poet" and "the poet himself." The whole reads like what Mr. Selfridge would

demand from his newspaper contributors if he were opening up a section that made an appeal to the oriental. Least there should be the least suspicion that any sordid motive is suggested, let us add at once that the school shows "a large yearly deficit which has, up to the present, been met by the founder of the school." A chief cause of the deficit is the fact that the poet insists upon having a very large staff. "There are about twenty teachers, some living with their families, resident in the school." There is no head master, the teachers merely electing each year an executive head. The nature of the discipline may be gathered from the following incident. Mr. Pearson was interrupted in his teaching one day by one of the boys calling his attention to the song of a bird. All teaching was suspended, and the pupils "listened till the bird had finished." The rest should be expressed in Mr. Pearson's own words: "The boy who had called my attention to the song said to me: 'I don't know why, but somehow I can't explain what I feel when I hear that bird singing.' I could not enlighten him, but I am quite sure that my class learnt more from that bird than it had ever done from my teaching." This, at any rate, is modest; and Wordsworth no doubt would approve. Clear understanding is not regarded as essential at Shantiniketan. The poet himself gives addresses, some of which appear to be above the heads of the boys, but this "does not seriously matter, for the boys, even without fully understanding, are all the time unconsciously absorbing the point of view of the speaker." There are people who appreciate this sort of thing; it is to them that this book must make its appeal.

*The Scientific Measurement of Classroom Products*. By J. Crosby Chapman and Grace Preyer Rush. (Boston: Silver Burdett & Co.)

The authors of this book have deserved well of the profession by giving in excellent form the results at present attained in the search for an objective standard by which to test school work. To be sure, readers will be exasperated by the incompleteness of our present results, and some of them will be disinclined to attach any great importance to the methods suggested. Ten years hence the book will be entirely obsolete, but even then it will have an historical interest; and at the present moment it does just the kind of work that we are urgently in need of in our developing profession. Dr. Chapman and Miss Rush supply exactly the kind of information that is necessary to enable the keener of our young teachers to keep abreast of the newest advances: they are playing the part of the cutting edge in educational progress. We hear a great deal about these various Thorndike, Curtis, and other tests, but we have hitherto had no means of getting a compendious account of the whole field. Here we have an admirable exposition of tests in Arithmetic, Handwriting, Reading, Spelling, English Composition, Language Ability, and Drawing. In addition, we have a general examination of the relation between subjective and objective scales, and a treatment of the application of the scales in actual school work. The authors are far from overestimating the importance of their subject, and even go the length of supplying a chapter on the dangers incidental to the use of these scales. A very valuable part of the book is the appendix, supplying the sources from which a full account of the various scales can be obtained. We are just at the beginning of scientific measurement, and it is well to have the exact addresses of those who supply material in the way of charts and other aids. However, the book is practically self-contained. Thanks to the generosity of the various investigators, the volume is copiously illustrated by specimens of the different scales of writing, spelling, arithmetic, and drawing. No progressive teacher can afford, at the present time, to be ignorant of this book, and inspectors of schools and directors of education should be compelled to make its acquaintance. It goes without saying that no trainer of teachers can remain ignorant of its contents and retain self-respect.

*Self-Reliance*. By Dorothy Canfield Fisher. (4s. 6d. net. Constable.)

The admirers of Mrs. Fisher's previous books will not be disappointed in this volume. We wonder that she has adopted the plan of getting her editor to write an introduction. Even

feeble writers should be discouraged in getting this initial shove-off; in the case of a tried writer like Mrs. Fisher it is deplorable. The subject is of first-rate importance, and is treated from all possible points of view. A glance over the titles of the seventeen chapters will show how catholic and how practical is the treatment. It is of equal value to the parent and the teacher; on the whole, however, the parent bulks more largely in these pages. As a good Montessorian, Mrs. Fisher could not have a better subject than she has chosen, and old-fashioned people who can be induced to read the book will learn much that will surprise—and help—them. The American child is notoriously better able to conduct its own affairs than is the English, but Mrs. Fisher is not satisfied with even the impressive efficiency of the transatlantic boys and girls. Naturally her illustrations are based on American conditions—as, for example, her treatment of the apartment hotel. But we must keep in view the fact that, socially, our conditions are rapidly changing in the direction marked out by American development. What is true to-day of American social-economic conditions will be true of ours within a dozen years. For the rest, human nature is the same on both sides of the Atlantic, and what Mrs. Fisher has to say about baby self-reliance, financial self-reliance, allowances, books and libraries, raw material, and the Robinson Crusoe instinct is as useful to us as to the Americans for whom it is primarily written. The relations between parents and schools are certainly somewhat different in the States; but in this, as in other matters, Mrs. Fisher writes so brilliantly, so charmingly, and with such a wealth of illustration, that even the dullest reader cannot fail to understand. Her matter is eminently self-interpretative, and the whole book serves as an admirable exemplification of how to make readers self-reliant.

*Breaking the Spell. An Appeal to Common Sense.* Preface by R. W. Macan. (Simplified Spelling Society, 44 Great Russell Street, London, W.C. 1.)

This book is apparently supplied free to the inquirer, for no price is stated. The Master of University College, Oxford, writes a convincing preface. And, indeed, no one can decline to admit that English spelling is full of redundancies and inconsistencies; that its acquisition entails a heavy burden on every child; and that the language is less readily learnt by foreigners because of the out-of-date forms in which sounds are expressed. There are practically no rules, and a very large number of words have to be learnt by heart, or have to be pigeon-holed in the brain, each as a separate picture. "Every child," says Mr. Macan, "who learns to spell correctly has, on the average, wasted a thousand hours of school time [a full year] in acquiring this precious accomplishment." The reader, as he turns page after page, grows more convinced of the folly and wastefulness of our present system. How is it possible to convince a child that school education is anything but a meaningless device on the part of the elders to worry the young, when he is made to learn "rode," "road," and "rowed"?

It is all very convincing, and yet, so strong is habit, the reform will be far more difficult to effect than it will be to persuade people to use electric heaters instead of wasteful open coal fires. The chief supporters, whose names are given, are professors, teachers, politicians. Writers of general literature, for the most part, stand aloof. We admit that we see no prospect of success to the movement in the near future. But sympathizers can readily learn the proposed system, and help to make it familiar to our eyes. New symbols and diacritics are avoided; generally the most usual spelling of a given sound is taken as the universal spelling of that sound.

*Education after the War.* By J. H. Badley. (3s. 6d. net. Oxford: Blackwell.)

Admitting that education is the dullest of subjects to write or read of, Mr. Badley invites expert readers to begin with his closing summary and then turn to whatever special points in the book may rouse interest. We may say at once that, without falling back upon this counsel of desperation, we have found it possible to get at the heart of the little book with no very serious effort. After the usual introduction, Mr. Badley has a chapter each on the National Aspect and the

Individual Aspect of Education. Then comes a chapter on Two Urgent Problems—the Citizenship of Women and National Service. Chapter V consists of the summary already spoken of. When we remember that the author is the President of the Petersfield Branch of the Workers' Educational Association, we get a key to the attitude he adopts. Indeed, he says all the things that he ought to say from this standpoint, and, though the result is nothing in any way fresh or original, it is eminently useful as a part of the much-needed system of educating the public to intelligent views. We who have to read all the educational publications sometimes forget what a large section of the public there is that is quite in the dark with regard to "reconstruction." The only point on which Mr. Badley's worker friends will differ from him is in his finding a place for those exclusive institutions, the old Universities and the public schools.

*Physical Education in relation to School Life.* By Reginald E. Roper. (2s. 6d. net. Allen & Unwin.)

This "Statement of present conditions and future needs for parents, teachers, members of Education and School Care Committees, and all interested in national health," had its origin in a thesis presented to the Victoria University of Manchester for the degree of M.Ed., and accordingly has an academic basis. Its author approaches his subject from a totally different point of view from that of the ordinary "physical instructor." The result is that we have a reasoned statement of the whole position, free from the bias that is so common in books on this topic. The minimum demand for physical education in school in the way of time, Mr. Roper maintains, is three half-hour periods per week. One of his main theses is that: "No more direct or effective interference with a vital factor could be invented than is provided by the school desk." Accordingly, he makes a careful study of the sitting posture, and illustrates his views by a series of tables and very ingenious diagrams. The chapter on Discipline is admirable. Dealing with the relative strength of boys and girls, our author has much to say that is new and striking, and rather unexpected in a book on this subject. Sex education is effectively dealt with, as is also the relation between town life and physique. The present and the future of physical education form the subjects of the last two chapters. The book can be strongly recommended to head teachers who are not specialists in this matter, and no less strongly to those teachers who are experts in physical training. The latter will learn from the book a great deal that is apt to be neglected by those who are engaged in the actual work of the gymnasium.

*Report of a Girls' Conference on Education.* (Is. Belvedere School, Liverpool.)

Miss Rhys, Head Mistress of the Belvedere School, Liverpool, hit upon the idea of getting her pupils to take more interest in their school work by giving them a chance of discussing with their teachers what education means, and why girls should study certain subjects. The result of the conference is printed in this report. Teachers will find much to interest them in its pages, and even administrators may read something to their advantage. The charm of the book is the freshness of the point of view. No doubt many of the comments of the girls are imitative, but, at any rate, they do not imitate the professional writer and speaker on education, so that we have the subjects treated from a new point of view. It is extremely interesting to compare the attitudes of the teachers with those of the pupils. Much self-restraint has been shown by the mistresses when dealing with the merits of their special subjects. Naturally what is here presented has been edited. We wonder whether Miss Rhys was a severe or a lenient censor when dealing with the views of the mistresses. It must be confessed that, in any case, the whole reads uncommonly like the expression of absolutely free opinion. Such experiments as these are hopeful indications of the living interest of teachers and pupils in what underlies the routine of school work.

*The Bird of Life.* By Gertrude Vaughan. (3s. 6d. net. Chapman & Hall.)

Rachel Cawardine is born with a desire to live. Her soul refuses to go in harness. Fortunately for her character, in

her childhood nothing but loving care surrounds her. Uncle Matthew is a successful study of a simple, sincere Christian, radiating goodness wherever he may be. One charge only can his dissenting flock bring against him: he is thought to have "leanings to Rome." Eventually he becomes a curate in the Established Church; but the taint of dissent clings to him, and poverty is his portion. On his death, Rachel is introduced to the family of her godfather, whose son she marries. But not until she has lived with Aunt Elizabeth in a tiny flat, and experienced the difficulty that a young and attractive girl meets in commercial life. The manager makes love to her, and she is quite suddenly dismissed. A lucky chance enables her to make a living out of journalism. Then comes the marriage with a young, strict, and narrow sacerdotalist, whose only idea in life is an unsympathetic devotion to pitiless duty. Rachel tries hard to be the self-sacrificing and devoted wife of a curate. In the end she leaves him. Apart, each works out his or her salvation, and later they come together again. The story is told with sincerity and insight. In the early chapters the narrowness of a mid-Victorian school is well described.

OVERSEAS.

Across the Atlantic has arisen a grand new organization, with the resounding title—The Pioneers of America. We picture to ourselves battalions of stalwarts in slouch hats, preparing to catch the first transport to France, but find that in reality the pioneers are little boys from nine to twelve—at what, in fact, in America is known as the "pre-scout" age. They have a motto: "Never turn back." More, they have an oath: but a most respectable one, drawn up, in fact, by a lady. It runs: "On my honour as a Pioneer, I will do my best to be clean in speech, in play, and in life, and to be true to others." The purpose of the new organization is to amalgamate all existing clubs of boys of pioneer age into a great national confederation whose programme "represents the best expert thought available." The adult leaders of the Pioneers are known as "pathfinders," and include men as well as women. We wish the pioneers and their pathfinders all manner of success.

Commissioner Claxton, of the Bureau of Education at Washington, has hit upon the idea of stirring up all the competent organists throughout the States, who happen to have organs at their disposal, to give a weekly one-hour recital of good, interesting music for the benefit of all the young people between the ages of eight and eighteen. This should gladden the heart of Dr. Hayward, since it is just the sort of thing that he has been yearning for on this side. No doubt our people will be heard to mutter the inevitable "after the War" proviso. But Commissioner Claxton is right in wanting it *now*. When could it be more appropriate than in these dark days of War?

Mrs. Florence Vosbrink has roused genuine public interest in an educational question. She is a member of the School Board of Chicago, and as such makes the charge that certain high-school principals select the women on their staffs on points of youth, figure, and beauty rather than of experience, ability, and brains. In England here we sometimes have whispers of the same sort of thing, but only whispers. No one would make the charge right out, and, if any one did, the accused persons would reply with an indignant denial. But there appears to be another side. The *School Review* (the excellent Chicago monthly) calmly puts the two questions: (1) Is the charge true? (2) If it is true, is there any justification for the procedure? With quiet courage it answers both questions in the affirmative. "School executives the country over are to-day considering as never before the personal appearance of candidates, especially of candidates for high-school positions. . . . School principals would not be truly masculine if they did not prefer an attractive-appearing, neat, trimly dressed, fresh, vivacious young woman to one whose qualifications are the direct opposite. They do exert such preference, because they know boys and girls prefer beauty to brains." Here the *Review* feels that it has gone far enough, so it proceeds to explain that beauty does not mean doll-like prettiness, and is not synonymous with youth; it is "that rich and wholesome attractiveness which any woman of any age ought to know how to cultivate." The *Review* goes

(Continued on page 108.)

on to assert that, "if a woman has brains enough to teach in a school, she ought to have brains enough to be an attractive woman personally. She could be if she had brains enough." Then the *Review* lets itself go. "A homely, slatternly, stringy-haired, unbuttoned, unkempt creature has no place in the classroom. She hasn't brains; she isn't gifted; at any rate, she isn't a model of the womanliness we want our girls to imitate and our boys to admire." One hardly knows what to think of all this. No doubt there is something in what the *Review* says, but Mrs. Vosbrink will certainly not be satisfied. She will probably insist that she and the *Review* are speaking of different things; and she will, without doubt, be right.

A school principal in California has hit upon the plan of setting aside one of the seven daily periods of school work as a "deficiency" period, during which pupils have to take up whichever subject they have shown weakness in. He claims that his scheme works excellently, but to complete the cure of deficiency he has instituted a special additional period every day (from 8.15 to 9 a.m.) for instruction in how to study. Each subject gets its turn once a fortnight, and the teachers have accordingly only an additional burden of three-quarters of an hour every two weeks. The pupils have, it is true, a permanent daily addition of three-quarters of an hour. But the principal says they like it, since the help they get in proper studying more than compensates for this extension of the school hours. It is the second of these Californian extensions that rouses our interest. It is one of the many indications that an extended school day is on its way. America leads in these matters, so we must be prepared to meet and manipulate the proposals that are certainly coming for a longer school day.

An American educational magazine published an article by a distinguished professor, in the course of which appeared a classified list of stories suitable for school use. Under the heading of "Cat" stories appeared Mr. Kipling's "Maltese Cat." In the next number of the magazine a critic pointed out that this particular "cat" was a flea-bitten pony, and went on to describe an incident in a library:

"Have you Laura Jean Libby's latest?" asked the severe lady.

"I'm afraid not," said the librarian; "but maybe I can find something else for you. Here is a good story—'The Kentucky Cardinal.'"

"Thank you," said the lady, "but I don't care for any religious book to-day."

"But," protested the librarian, "this cardinal was a bird."

"That fact," answered the lady with freezing dignity, "would certainly not recommend the book to me, I assure you."

## GENERAL NOTICES.

### GREEK.

*Greek Ideals: A Study of Social Life.* By C. Delisle Burns. (5s. net. Bell.)

The Greece spoken of here means Athens in the fifth century. The views of Plato, Aristotle, and Socrates are given at some length. Athenian religion and its influence on social life are fully described. We have "The Athens of the country folk, the Athens of the traders and merchants, the Athens of the wealthy few, the Athens of the poorer craftsmen, the Athens of free women, and the Athens of boys in the gymnasia and of girls in the precincts of temples."

### LATIN.

"Longmans' Latin Course."—*A Senior Latin Reader.*

Compiled by J. Lang. (3s. 6d. Longmans.)

The idea of the book is to give fairly long extracts from classical authors for the use of elder pupils for the one year or two years preceding their entrance to a University. There are about 150 pages of text, relieved by a large number of illustrative sketches, and nearly 100 pages of notes. The authors introduced are Salust, Livy, Cicero, Suetonius, Erasmus (chronologically out of place), Tibullus, Ovid, Virgil, and Horace.

*Selected Letters of Cicero.* Edited by Hubert McNeill Potat. (2s. 6d. net. Harrap.)

Compiled for freshmen who have not enjoyed opportunities of very scholarly teaching, the notes are very full, some one hundred

pages in comparatively small type. The "Letters" occupy about eighty pages of clear type.

*Livy*, Book XXIII. Edited by A. G. Peskett.

(2s. 6d. Cambridge University Press.)

The volume contains an introduction, the text, notes, a critical appendix, an index, and a map. The editor, in his notes, has kept the teacher in view as well as the pupil. This is a wise precaution that editors sometimes overlook.

*Latin Lists and Notes for Examination Purposes.*

By the Rev. F. C. Gillespie. (1s. net. Oxford: Blackwell.)

This little book is a tribute to examiners, whose habits after years of experience can be gauged with accuracy. In twenty-two not very crowded pages will be found "lists of those words and phrases which are the particular favourites of examiners in Responsions and the Senior and Junior Local Examinations." The remaining fourteen pages call attention to "the rules that are most frequently broken by men who are weak in Latin prose."

*Perse Latin Plays.* By R. B. Appleton. Second edition.

(1s. 6d. net. Heffer.)

It speaks well for the "new method" that a second edition of these plays should be called for. They were written by Mr. Appleton especially for middle forms in schools, and undoubtedly make the study of the language more real to young students than extracts from Caesar or Livy would do. There are eleven plays, and an introduction indicating how the book should be used.

### FRENCH.

*The Beautiful Folk-songs of the Stricken Provinces of France.*

Collected by Austin de Croze; harmonized by Gustave Ferrari.

(2s. 6d. net. St. Leonards-on-Sea: Butler.)

A publisher's note tells us that over four thousand of these Songs have been bought among 185 schools in Great Britain. The note also appears to indicate that the price to schools is 1s. instead of 2s. 6d. The folk-songs give the true spirit of a people in a way that nothing else can; and this opinion is endorsed by Sir John McClure, who writes a preface. M. de Croze hopes that his book will help to secure the friendship of the French and English nations.

"Harrap's Modern Language Series."—*Marguerite et Ses Amis.* Par V. Louis. Illustré par M. W. Tarrant. (1s. 6d. net. Harrap.)

A first reading book for little girls who have had some practice in oral French. Each chapter describes part of the home life of a little French girl, and is accompanied by a picture which helps to the meaning of the words. A vocabulary is added "reluctantly" for the more backward children. The book is for reading and not for translation; it will prove very helpful for the stage indicated.

*Elementary French Exercises.* By the Rev. B. V. F. Brackenbury. (1s. 6d. Macmillan.)

The first sentence of the first exercise is "Of the boy"; the last exercise is an extract from "The Water Babies." Between these two come some eighty pages of English sentences, illustrating the main difficulties of accidence and construction. There is a vocabulary. The compiler's view is that the book should be used as a drill on whatever grammar is being learnt.

"Heath's Modern Language Series."—*En France.* With Notes, Oral Exercises, and Vocabulary. By C. Fontaine. (2s. net. Harrap.)

M. Duval takes his children for a holiday journey through France. There are plenty of pictures. Just the sort of book that the teacher needs for a junior class.

"Heath's Modern Language Series."—*Notebook of Modern Languages.* Prepared by I. H. B. Spicrs. (1s. 3d. net. Harrap.)

An 8vo of nearly 150 blank pages of writing paper closely ruled. Some of the pages have headings and a few examples, such as "Synonyms: *patrie, pays, contrée*"; but for the most part they are blank. The compiler wishes to encourage pupils in the habit of making their own notes.

### GERMAN.

*Deutsche Anekdoten für die Schule.* Compiled and edited by Lilian I. Stroebe. (9d. net. Harrap.)

Dr. Lilian Stroebe finds anecdotes a great help in the early stages of German, and has accordingly compiled a collection of over fifty. They are short, and the type is well spaced. Each might form the subject of a weekly lesson.

### SPANISH.

*A Modern Spanish Grammar.* By E. Alec Woolf.

(3s. net. Bell.)

A complete grammar in good type and clearly arranged. *Viva*

voce practice is given, the vocabulary is learnt by frequent repetition, and the grammar rules are deduced from the examples given.

"Macmillan's Spanish Series."—*Elementary Spanish-American Reader*. Edited, with exercises, notes, and vocabulary, by Frederick Bliss Luquiens. 4s. net. (2) *Spanish Reader of South American History*. Edited, with notes, exercises, and vocabulary, by Edward Watson Supple. (4s. 6d. net. Macmillan.)

These are attractive volumes, in large type, with plenty of illustrations. The first one is elementary in the sense that it contains fairly easy reading matter for students who have not advanced very far in the language. It is not a beginners' book. The extracts in both volumes are from recognized writers.

#### RUSSIAN.

"Oxford Russian Plain Texts."—(1) *Pegasus; Biryuk; Forest and Steppe*, by Turgenev; (2) *A Prisoner of the Caucasus*, by Leo Tolstoy. (Each 1s. net. Clarendon Press.)

As the title indicates, these little volumes contain the Russian text only, no notes or introduction. Each volume has about sixty pages of excellent type.

*Third Russian Book*. Extracts from Aksákov, Grigoróvich, Herzen, and Saltykóv. Accented and edited, with full notes and complete vocabulary, by Nevill Forbes. (2s. 6d. net. Clarendon Press.)

These passages from four Russian classic authors continue the series introduced by Mr. Forbes's "Russian Grammar" and his "First and Second Russian Books." The reading matter covers 130 pages, with footnotes; there is a vocabulary.

"Constable's Russian Readers."—*Elementary Russian Reader*. Edited, with accents, notes, exercises, and vocabulary, by Michael V. Trofimov. (2s. Constable.)

A selection of easy short pieces, including proverbs, riddles, light verse, and simple stories.

*A Hundred Russian Verbs in Common Use; and 1,000 of their Compound Forms*. (Simpkin, Marshall.)

Each page contains a verb, with the compounds and the English equivalents arranged in order beneath. Intended to be used as an accessory to grammar and dictionary.

#### ENGLISH.

"Macmillan's Pocket Classics."—(1) *Southey's Life of Nelson*.

Edited by Frederick Houk Law. (1s. 3d. net.) (2) *The Last Days of Pompeii*. Edited by J. H. Castleman. (1s. net.) (3) *The Earlier Essays of James Russell Lowell*.

Edited by Ernest Godfrey Hoffsten. (1s. 3d. net.) (4) *Shakespeare's King Richard III*. Edited by A. R. Brubacher. (1s. net.) (5) *Shakespeare's King Lear*. Edited by Philo Melvyn Buck. (1s. 3d. net. Macmillan.)

Five more volumes in this handy series of well printed little books. Each volume contains an introduction and notes.

*Scott's Lord of the Isles*. (10d. net. Clarendon Press.)

The "Plain Text Series," to which this volume belongs, is a positive boon to teachers and pupils alike, who are apt to be overfed with commentaries. The poem occupies 130 pages, neatly bound in red cloth; or in paper covers for 8d.

*A First Book of English Prose for Repetition*. Passages chosen and arranged by J. H. Fowler. (9d. Macmillan.)

About forty passages, varying from one to two pages in length, intended to accustom the ear to the harmonies of the best English speech, and to store the memory with beautiful thoughts and images. There are no notes, nothing to distract the pupil's attention from the passage he is studying.

The "Granta Shakespeare."—*King Henry V*.

Edited by J. H. Lobban. (1s. net. Cambridge University Press.)

Mr. Lobban provides a glossary of difficult words, especially of words whose meanings have changed. An introduction gives the necessary help to the young reader, and there are notes.

*Johnson's Life of Pope*. Edited by A. R. Weckes. (2s. Clive.)

This edition contains all that is necessary for a critical study of the "Life" in view of an examination. The text occupies 118 pages; the introduction, dealing both with Pope and Johnson, 22 pages; the notes about 50 pages.

*The Pronunciation of English*. Reduced to Rules by Means of a System of Marks applied to the Ordinary Spelling. By W. A. Craigie. (1s. 6d. net. Clarendon Press.)

A very useful book for foreigners learning to pronounce English.

*Stories in Verse*. Selected by V. H. Collins. (1s. 6d. Clarendon Press.)

The editor excludes reflective, lyrical, and descriptive poems. He inserts in this collection poems that relate a definite story. They are suitable for young children. Quite a good selection.

#### HISTORY.

*History of Serbia*. By Harold W. V. Temperley. (10s. 6d. net. Bell.)

At the present moment the history of the Serbian nation is of special interest, and readers will gladly turn to this book, in which Mr. Temperley has put the results of many years of travel in the Balkans and of study in the British Record Office, "which furnishes material as rich and important as it is neglected." For the first time an attempt is made to present a complete and scholarly account of the Serbians from early times. There are coloured maps.

*The Story of the French Revolution*. By Alice Birkhead. (1s. 9d. Harrap.)

A new volume in the "Told Through the Ages" series. The type is large and clear, well suited for younger readers, and there are many illustrations. The volume contains over two hundred pages.

#### GEOGRAPHY.

*The Continents and Their People: Oceania*. A Supplementary Geography. By J. F. Chamberlain and A. H. Chamberlain. (3s. Macmillan.)

Several volumes have already appeared in this series, and the authors speak of this as the last one, thus concluding a general conspectus of the countries of the world viewed in relation to their inhabitants. The present volume includes the countries of Australasia and the more important islands of the East Indies and the Pacific Ocean. It is part of the teaching of the new geography that physical features should be studied in connexion with the inhabitants of the country, and this series of geographical aids gives useful information, accompanied by many pictures.

*Jataka Tales*. Selected and Edited by H. T. Francis and E. J. Thomas. With Introduction and Notes. (7s. 6d. net. Cambridge University Press.)

This selection of Tales is published at an opportune moment, as attention is being directed to the opportunities for moral teaching and training the will that are to be found in the Jataka. The paper and type make the book a pleasant one to read. The translation is taken from the complete edition issued under the editorship of Prof. E. B. Cowell. There are photographic illustrations from the carvings of the Bharhut Stupa.

*Stars at a Glance*. A Handy Sky Guide on Novel Lines. (1s. net. George Philip.)

The little volume contains a general introduction to the study of the stars, a chart of the moon, a calendar, index to the monthly aspect charts, and instructions for finding stars on these charts without the aid of a compass. There are also a number of coloured plates of the heavens.

President Nicholas Murray Butler.

DUSTLESS and HYGIENIC SCHOOLS

On all School, Laboratory, Library, &c., Floors and Linoleums of every description

USE

FLORIGENE

(Regd.)

DURING THE SUMMER VACATION for Best Results.

BRITISH MADE.

It is **IMPORTANT** to **NOTE** that **ONE APPLICATION** of "Florigene" ALLAYS the DUST and DIRT for **2 to 12 MONTHS**, according to traffic, not only during each Sweeping (without sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance. "Florigene" is also easily and quickly applied, and saves time and labour.

These sanitary, labour-saving, and economic advantages are **NOT** attained by sweeping-powders or any mechanical or other method.

NEW ADDRESS:—

Send for Particulars, Medical Reports and Testimonials, to the Sole Manufacturers:

The "DUST-ALLAYER" Co., 4 Vernon Place, Bloomsbury Square, London, W.C.1.

Contractors to the Admiralty,

War Office,

H.M. Office of Works,

Colonial Govts.,

L.C.C., &c.

A COMMERCIAL COURSE.

ARITHMETIC.—Modern Side Arithmetic. By Rev. T. MITCHESON. Part I, 1s. (with Answers, 1s. 6d.; Answers only, 1s.). Part II, 1s. 6d. Complete, 2s. Complete, with Answers, 3s.  
ALGEBRA.—Examples in Algebra. By Rev. T. MITCHESON. 1s. With Answers, 1s. 6d. Answers only, 1s.  
MATHEMATICS.—Geometry of Triangle. By WILLIAM GALLATLY, M.A. 2s. 6d.—Quadratic Partitions. By Lt.-Col. ALLAN CUNNINGHAM. 12s.—Elements of Applied Mechanics. By M. W. CROFTON. 7s. 6d.—Elements of Logarithms. By WILLIAM GALLATLY, M.A. 1s. 6d.  
BOOK-KEEPING.—Elements of the Theory and Practice of Book-keeping. By JOHN WALMSLEY, B.A. 3s. 6d.  
MODERN FOREIGN LANGUAGES.—The Hamiltonian System of Interlinear Translation. Gospel of St. John in Spanish, French, Italian, or German, with Translation. 2s. 6d. each. Also many other books. Full list on application.

ITALIAN.—Conversational Course. By Prof. TOSCANI. 5s.—Reading Course. 3s. 6d.  
SPANISH.—Spanish Grammar. By Prof. SCHILLING. 3s. 6d. Key, 2s.—Don Basilio (Conversation and Correspondence). 2s. 6d.  
DRAWING.—Carpenter's Drawing Books. 6 Parts, at 1s. 2d. each, or 6 for 6s. 6d. post free.—Drawing Copies, as set at College Exams. 1s. 9d. per dozen. Specimen 2d.  
HANDWRITING.—Public School Modern Handwriting. By R. WENLOCK. 6d.  
COMMERCE.—Business Prospects in Russia. By A. T. STEWART. 1s. India, 2s.  
Also Questions set at previous College of Preceptors Examinations in Arithmetic, Algebra, English, French, Latin, History, Geography. 1s. 2d. each, post free. Full list on application.

NET PRICES. POSTAGE EXTRA unless otherwise stated.

# THE COLLEGE OF PRECEPTORS

## CERTIFICATE EXAMINATIONS, 1918.

### CLASS-BOOKS FOR JUNIOR AND PRELIMINARY STUDENTS.

#### Mathematics and Science.

**Algebra, Junior.** By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 2s. 6d. With Answers, 3s.

"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association*.

**Algebra, Junior, Test Questions in.** By F. ROSENBERG, M.A., B.Sc. 1s. With Answers, 1s. 3d.

**Arithmetic, Preliminary.** By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 1s. 6d. With Answers, 1s. 6d.

"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.  
"Quite admirably suited for its purpose."—*London Teacher*.

**Arithmetic, The Junior.** Being an adaptation of *The Tutorial Arithmetic* suitable for Junior Classes. By R. H. CHOPPE, B.A. With or without Answers. 2s. 6d.

"Just as good a handbook on Arithmetic as the student can desire."—*Nature*.  
"No better arithmetic for school work has come into our hands."—*Educational News*.  
"The book is well got up, and has a quite good selection of examples throughout."—*Mathematical Gazette*.

**Botany, Junior.** By FRANCIS CAVERS, D.Sc. 2s. 6d.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.  
"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster*.

**Chemistry, Preliminary.** By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 1s. 6d.

"It is an excellent little book, and will make a clear understandable foundation for a systematic treatment of Chemistry in the higher forms."—*Educational News*.

"Nothing is taken for granted, everything is carefully and simply explained."—*School Guardian*.

**Chemistry, Junior.** By R. H. ADIE, M.A., B.Sc. *Second Edition*. 2s. 6d.

"The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature*.

**Geometry, Preliminary.** By F. ROSENBERG, M.A., B.Sc. With or without Answers. 2s.

"The book is certainly one to be recommended."—*Preparatory Schools Review*.

"The author's object is, by blending practical and theoretical work at the outset, to avoid the unattractiveness of the purely theoretical textbook and the tendency to loose reasoning of the practical manual. In this he seems to have succeeded."—*Journal of Education*.

"An attractive geometry for beginners. The exercises are interesting and the explanations clear."—*Education*.

**Geometry, Junior.** By A. G. CRACKNELL, M.A., B.Sc. 2s. 6d.

"A simple treatment of the elements of geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster*.

**Heat, Junior.** By JOHN SATTERLY, D.Sc., M.A. 2s.

"Affords a remarkably clear exposition of the main principles of the science such as is required by elementary students."—*Secondary School Journal*.

**Magnetism and Electricity, Junior.** By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 2s. 6d.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

"This book should not have any difficulty in holding its own, for it is one of the best regarded from the standpoint of exact thinking."—*Electrical Engineering*.

**Science, Junior Experimental.** By W. M. HOOTON, M.A., M.Sc., F.I.C. *Second Edition*. 2s. 6d.

"The explanations are clear, and we can recommend the work heartily."—*Secondary Education*.

#### Languages, History, and Geography.

**English Course, Preliminary.** By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough High School. 1s. 6d.

"An English Grammar embodying in general recommendations of the Joint Committee on Grammatical Terminology. Unnecessary matter is excluded, and the author has kept in view the real aim of grammar, namely, 'the production of good English.'"—*Athenaeum*.

"The language is simple, the examples are judicious, and everything possible is done to make the subject bright and interesting to the pupils for whose needs it caters."—*The Literary World*.

**English Composition, Junior.** By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.

"This excellent manual makes plain for the young pupil the essentials of good writing. A distinctly workmanlike production that can be heartily recommended as one of the best of its kind."—*Education*.

**English Grammar, Junior.** With Parsing and Analysis. By A. M. WALMSLEY, M.A. 1s. 6d.

"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association*.

**French Course, Preliminary.** By H. J. CHAYTOR, M.A., and H. E. TRUELOVE, B.A. *Second Edition*. 1s. 6d.

"This elementary course supplies an excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method, and also to the necessity for thoroughness in the accidence of the language. Free use is made of black type for emphasis."—*Athenaeum*.

**French Course, New Junior.** By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 2s. 6d.

"The short extracts are well chosen. With a capable teacher we have no doubt that this would prove a useful textbook."—*The Journal of Education*.

"The book becomes a serious rival to those existing. It will probably win easily."—*Schoolmaster*.

**French Reader, New Junior.** By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s.

"Consists of well-chosen literary extracts in French."—*Education*.

**Geography, Preliminary.** By E. G. HODGKINSON, B.A.

"This book bears the stamp throughout of the skilful practical teacher who combines a sound knowledge of his subject with an equally sound knowledge of the needs and capacities of the pupils for whose use the book is intended."—*Teachers' Times*.

**Geography, Junior.** By G. C. FRY, M.Sc. 2s. 6d.

"A concise book of geography on modern lines. The diagrams are bold and convey definite visual instruction directly illustrating the text."—*Education*.

**History of England, Preliminary.** By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, M.A. With Illustrations. 2s.

"An interesting book well illustrated, with chapters on social life, and some excellent maps."—*Journal of the Assistant Masters' Association*.

"In addition to an outline of political events it tries to give some idea of social and constitutional development, and also to connect history with geography. It is clearly written and well illustrated."—*School World*.

**History of England, School.** By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.

Also in Three Parts as follows:—I, to 1603; II, to 1485-1714; III, 1660-1910. 1s. 6d. each.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

"Very careful judgment has been exercised in the selection of the matter, and a proper perspective maintained."—*Educational Times*.

**Latin Course, New Junior.** By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 3s. 6d.

"Admirably unites the more modern methods of teaching with those which have long stood the test of time."—*Educational News*.

"A very successful compromise between the old and the new methods—a combination of what is best in both."—*Journal of the A.M.A.*

METHUEN & CO., Ltd., 38 Essex Street,  
London, W.C.2.

## J. M. DENT & SONS, LTD.

FOR EVENING SCHOOLS.

**A Rapid French Course.** By RANDAL WILLIAMS and WALTER RIPMAN, M.A. 2s. 6d. net.

This book has been written for the use of students of seventeen years and upwards, whether working in evening classes or privately. It deals with French life in an interesting way, contains a useful and extensive vocabulary, with many dialogues, and is well illustrated.

**La France.** By G. GUIBILLON, Professeur au Lycée de Bordeaux. 2s. 6d. net.

An attractive series of pen pictures, with many drawings, of the varied aspects of French life, in town and country. It is a treasure house of valuable information presented in a scholarly form.

By WALTER RIPMAN, M.A.

**First Steps in French.** Crown 8vo, Cloth, 2s. 3d.

An alternative to "Dent's First French Book," containing many new and improved features, and based upon **Four New Wall Pictures** (price 4s. 6d. net). The first part of the book is also issued separately in **Phonetic Transcription** (price 7d. net), and a **Teacher's Handbook, The Early Teaching of French**, is also published (price 1s. 9d. net).

**Further Steps in French.** Cr. 8vo, Cloth, 2s. 3d.

**Première Grammaire Française.** By H. E. BERTHON, M.A., Taylorian Lecturer in French in the University of Oxford. Fcap. 8vo. Cloth. 2s. 3d.

**First Exercises in French Grammar.**

**Further Exercises in French Grammar.** By Miss F. M. S. BATCHELOR. Each 1s. 6d.

These books are intended for use with "Première Grammaire Française."

**A French Notebook.** By C. E. HODGES, M.A. Fcap. 4to. 2s.

A skeleton note-book designed for a four years' course, and specially arranged for use in connexion with Berthon's "Première Grammaire Française."

**French Songs.** With Airs and Tonic Sol-fa. Compiled by VIOLET PARTINGTON. Crown 8vo. Limp Cloth, 7d. net.

**Dent's First Spanish Book.** By F. R. ROBERT. Extra fcap. 8vo. Pp. viii + 184. 2s. 3d. net.

[New and Revised Edition.]

**Composition Through Reading.** The Direct Method of Teaching English. By F. PICKLES, M.A., Head Master of St. George's Secondary School, Bristol.

**Introductory Book, 1s. 6d. net.**

**Book I, 1s. 6d. net; Book II, 2s. net.**

By Dr. RICHARD WILSON,

Crown 8vo. 1s. 9d. each.

**Coronata.** A Book of Poems in Rhyme and Rhythm from Shakespeare to the present day.

**Storytellers' Hall.** An English Reading Book for Lower and Junior Middle Forms. Folk-Lore, Myth, and Legend.

**Treasure Trove.** An English Reading Book for Middle Forms. The simpler English Literature.

Each book contains eight illustrations in colour.

**The Old Testament for Schools.** Arranged and Edited by Canon MORLEY STEVENSON, M.A., and C. W. BAILEY, M.A. Crown 8vo. 512 pages. 3s.

Contains the Bible narrative in historical sequence. All incidents and terms unsuitable for children's reading have been deleted.

**English Literature for Schools.** Edited by ARTHUR BURRELL, M.A. Fcap. 8vo, Cloth. Price 7d. each.

"Eminently suited for school reading. They are well edited, well printed, and well bound; and they are cheap."—*School World*.

Messrs. J. M. DENT & SONS will be pleased to send Catalogues and Lists on application. Unless you apply they cannot be sent.

10-13 BEDFORD STREET, W.C.2.

# THE COLLEGE OF PRECEPTORS

## CERTIFICATE AND LOWER FORMS EXAMINATIONS,

### MIDSUMMER 1917.

#### LIST OF SUCCESSFUL CANDIDATES AT THE HOME CENTRES.

The list of successful candidates at the Colonial Centres will be published in the November number of "The Educational Times."

### CERTIFICATE EXAMINATION.

[Throughout the following Lists, bracketing of names implies equality.]

The Prizes will be awarded as soon as the results of the Examination at the Colonial Centres are known. The awards will be communicated by post to the successful candidates, and a list of the awards will appear in the November number of "The Educational Times." The same number of "The Educational Times" will contain extracts from the Reports of the Examiners on the work in the several subjects of the Examination, and a list of the Candidates who obtained the First and Second Places in each Subject on Senior Papers.

## BOYS.

N.B.—The small italic letters denote Distinction in the following subjects respectively:—

a. = Arithmetic. al. = Algebra. b. = Botany. bk. = Book-keeping. ch. = Chemistry. d. = Drawing. do. = Domestic Economy.	du. = Dutch. e. = English. f. = French. g. = Geography. ge. = German. gm. = Geometry. gr. = Greek.	h. = History. he. = Hebrew. i. = Irish. it. = Italian. l. = Latin. lo. = Logic. lt. = Light and Heat.	m. = Mechanics. ma. = Magnetism & Electricity. ms. = Mensuration. mu. = Music. p. = Political Economy. ph. = Physiology. phys. = Elementary Physics.	s. = Scripture. sc. = Elementary Science. sh. = Shorthand. sp. = Spanish. ta. = Tamil. t. = Trigonometry. w. = Welsh.
---	--	---	--	---

The signs \* and † prefixed to names in the Junior and Preliminary Lists denote that the Candidates were entered for the Senior and Junior Grades respectively.

In the addresses, Acad. = Academy, C. or Coll. = College, Coll.S. = Collegiate School, Comm. = Commercial, Conv. = Convent, Elem. = Elementary, End. = Endowed, Found. = Foundation, H. = House, Hr. = Higher, Inst. = Institute, Int. = International, Inter. = Intermediate, Poly. = Polytechnic, Prep. = Preparatory, P.-T. = Pupil-Teachers, S. = School, Sec. = Secondary, Tech. = Technical, Univ. = University.

**HARRAP'S LATEST PUBLICATIONS****ENGLISH EXTRACTS AND EXERCISES**

For Comparative Study and Training in Composition. By  
F. H. PRITCHARD, Lecturer in Literature at the Municipal  
Technical School, Devonport. Large cr. 8vo, 256 pages, 2s. net.  
(Prospectus on application.)

AN admirable practice-book in English for lower and middle forms  
in secondary schools and for upper classes in primary schools. The  
main idea is to centre all the week's work in English round a  
suitable extract. The exercises are abundant and in many cases  
novel in character. No essential point in elementary English is left  
untouched, and wherever possible opportunity is taken to stimulate  
interest in the author or extract under consideration.

---

**COURSE OF TWELVE LECTURES ON**  
**THE IDEAL AND THE ACTUAL IN PRESENT DAY EDUCATION**

To be delivered at The College of Preceptors, Bloomsbury Square, London, W.C.1., on Thursday evenings  
 27 September to 13 December, 1917

By **JOHN ADAMS, M.A., B.Sc., LL.D., F.C.P.,**  
 Professor of Education in the University of London.

The Course of Lectures (the Second Course of the Forty-fifth Annual Series) will begin on Thursday, September 27th, at 6.30 p.m.

In view of the present educational unrest, this Course will treat the practical problems of the school in such a way as to supply teachers with the data necessary to form just conclusions about the lines to be followed in the changed conditions that are coming. While preparing for whatever developments may lie before them, teachers must carry on in the meantime. The lectures accordingly will take account of things as they are, though keeping well in view the problem of how they ought to be. They will be fully illustrated throughout by references to the teaching of all the subjects of the ordinary Course in English, Continental, and American schools.

#### SYLLABUS.

I. (Sept. 27.) *The Ideal Teacher.*—Advantages and dangers of dealing with such subjects: the old and the new ideals: distinction between ideal teacher and ideal human being: physical, mental, and social qualities of the ideal teacher: hero-worship in school: the resolution of the ideal into the possible and actual: the compensations of common-placeness: the range of responsibility for the effects of personality and its trappings.

II. (Oct. 4.) *The Ideal Pupil and his Opposite.*—Demands of Plato, Quintilian, Ascham, and the rest: analysis of qualities of ideal pupil: standard by which the ideal is to be tested: the teacher's fallacy: the actual pupil: analysis of his defects: manipulation of his weaknesses: the importance of the common-place pupil: meaning of individuality, personality, and character: teacher's right to attempt to modify character at all.

III. (Oct. 11.) *The Class.*—Collective *versus* individual instruction: the team an educational collective unit: the class a teaching collective unit: the class essentially a compromise: advantages of collective presentation: disintegration and integration of the class spirit: Dr. Montessori's claim to have rung the death knell of class teaching: size of classes: individual taught through the class and the class through the individual: individualistic group teaching.

IV. (Oct. 18.) *Discipline.*—Popular misunderstandings about nature of discipline: the old discipline and the new: place of the "drill" principle: mental discipline: free discipline: minimum amount of restraint essential to satisfactory discipline: effect of school organization on discipline: self-realization and self-expression: freedom *versus* caprice: internal and external control: the anarchic school and the school republic.

V. (Oct. 25.) *The New Teaching.*—Fashionable use of the term *new*: invariableness underlying change: changes during life of a teacher: characteristics of the new teaching: self-consciousness: paidocentricism: respect for pupils' individuality: responsibility thrown on pupils: opposition to bookishness: use of interest and anisic attention: emphasis on disintegration-beat in class work: bias towards vocationalism tempered by belief in good all-round education.

VI. (Nov. 1.) *Textbooks and their Manipulation.*—Two kinds of textbooks, logical and psychological: textbook as authority: as an aid: reaction against textbooks: development of lecture method: textbooks partly superseded by pupils' notebooks: dangers and advantages of this plan: effect of multifolding: probable development of textbooks: skeletal forms: relation of "subject" associations to new textbooks: standard type to suit different needs.

VII. (Nov. 8.) *Teaching how to Study.*—Effect of paidocentricism on the work of the pupil: method of learning naturally correlated with the method of teaching: pupils made conscious of their methods: books by F. M. McMurry and Dr. Lida Earhart: Rev. John Todd and William Cobbett applied to earlier stages of study: need for freedom in applying principles: varying methods according to temperament: residuum of unalterable principles: ultimate responsibility of the pupil.

VIII. (Nov. 15.) *Scales for Testing School Work.*—General demand for objective standards: Binet's Ready Reckoner of Instruction and Metric Scale of Intelligence: development of the idea so as to include many of the school subjects: work of Thorndyke, Ayres, and Curtis: Scales in arithmetic, handwriting, reading, spelling, drawing, English composition, language ability: difficulty in applying the scales: steady advance towards a workable scale.

IX. (Nov. 22.) *The School and the Home.*—Effect of the new teaching on home lessons: changing attitude of parents towards teachers: contrast with German system: nature and limits of parental co-operation: direct instruction *versus* atmosphere: the Gary plan and its reaction on relations with home: possibility of developments of co-operative cookery: night and day use of school buildings and its results: teachers as social workers.

X. (Nov. 29.) *The Teacher and his many Masters.*—Politics architectonic to education: schoolmaster must take his orders from the statesman: hierarchy of authorities representing the statesman: teacher's attitude to all these authorities: limits of his freedom, yet freedom within these limits: the official mind, its limitations and manipulation: teacher as expert must be allowed free scope to carry out the general instructions he receives: how to satisfy the requirements of authorities and yet retain substantial independence.

XI. (Dec. 6.) *The Educational Engineer.*—The principal of scientific management applied to teaching: introduction of a theoretical-practical man between the pure psychologist and the "direct" teacher: functions of the American school superintendent, and the English Director of Education, Director of Studies, and Head Master: aim and sphere of the "direct" teacher: how to minimise the evil effects of expert interference from without.

XII. (Dec. 13.) *The Literature of Education.*—Bad repute of teachers as readers: the inarticulate profession: need for general as well as special reading: the profession as raw material for literature: the literature that deals with the subject matter and with methods: the political literature of education: the "Curse of Education" type: the literature of principles: need for guidance in selection: periodical literature: need for keeping up to date, and how to do it.

#### FEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

\*.\* Members of the College have free admission to the Course.

### B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

*No charge is made to Purchasers.*

*All communications and inquiries are treated in the strictest confidence.*

### C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

*Full particulars will be forwarded on application.*

## The Educational Times.

Until further notice, "The Educational Times" will be issued four times a year—on the 1st of February, May, August, and November. The next issue will appear on February 1st.

Communications intended for the Editor should be addressed to Ulverscroft, High Wycombe.

### MR. FISHER'S BILL.

HERALDED by Mr. Fisher's clear and convincing first-reading speech, the Education Bill was published in the early days of August and received widespread support in the newspapers. No one fails to appreciate Mr. Fisher's sincere desire to improve the educational opportunities for the rising generation. His scheme is magnificent in its extent: he proposes that the State should control all its citizens between the ages of two and eighteen years.

The Bill runs to forty-seven clauses and contains several complicated points, but its main provisions are simple. The first seven clauses deal with the National System of Public Education. The county remains the normal unit of local administration, but the rights of the smaller authorities are safeguarded and the duty of mutual consultation is laid down. Powers are given for Authorities to group themselves into Provincial Associations. The rate-limit of twopence is abolished. Clause 2 lays it down that in central classes or schools shall be given "practical instruction."

Clauses 8 to 16 deal with Attendance at School and Employment of Children and Young Persons. The compulsory age up to which children must attend full-time schools is placed at fourteen, with no exemptions of any kind, and powers to raise to fifteen. After the

age of fourteen (or fifteen) young persons must attend day continuation schools for eight hours a week during school terms, with the following exemptions:—The obligation does not apply (1) to children over the age of fourteen on the appointed day; (2) to children over sixteen who have passed a University matriculation examination; (3) to children who are receiving full-time education in secondary schools (a) "recognized" by the Board of Education or (b) considered efficient by the Local Authority. Under the age of twelve no child is to be "employed"; from twelve to fourteen no child is to be employed in mine, factory, or quarry. After the latter age the Authority may control employment. Employers are bound to allow suitable time for attendance at continuation schools.

Clauses 17 to 21 refer to Extension of Powers and Duties of Local Authorities. Provision is to be made for games and physical training in all grades of schools; medical inspection and treatment are to apply to secondary schools, and power is granted to establish nursery schools for children over two and under five years of age.

Clause 22 abolishes all fees in public elementary schools.

Clauses 23 and 24 deal with inspection of schools not already under inspection. It is laid down that any school may be inspected on application from the Governors or Principal; and that all schools of which the Board have no knowledge must report themselves to the Board within three months, under a penalty of £10, plus £5 a day.

The remaining clauses deal with administrative provisions, important mainly to the officials in education offices, until we come to Clause 44, which gives some definitions. A child is any boy or girl under the age of fourteen (or fifteen if the Local Authority so decide), and that age is not technically reached until the end of the school term in which it is actually reached. A young person is any boy or girl from the compulsory school-leaving age up to the age of eighteen. Practical instruction means cookery, laundry work, housewifery, dairywork, handicrafts, and gardening, and "such other subjects as the Board declare to be sub-

jects of practical instruction." "Employed" means employed for gain.

The provisions contained in the Bill were already expected. Concerning continuation education the findings of Mr. Herbert Lewis's Committee are incorporated. With these we dealt fully in the August number. Lord Haldane's Provincial Councils make no direct appearance; but power is given to form Provincial Associations, and these, if formed with the approval of the Board, will receive grants, both local and central, and will have the spending of them. If this provision is carried out, the Directors of Education will sit in their offices and twiddle their thumbs while other officials in other offices will do their work and assume their responsibilities. It is obvious that this part of the Bill will be opposed by every Education Office in the country.

Almost everyone will approve of the proposal to raise the age of compulsory attendance to fourteen, without exemption; but steps will have to be taken to ensure that children between the ages of twelve and fourteen shall obtain a valuable education and shall not remain, as now too often happens, marking time till their day of freedom arrives. The proposal to give Authorities the option of raising the compulsory age to fifteen will be hotly combated, on the ground of the undesirable jealousies and friction that may arise in adjoining localities.

The real fight over the Bill will be joined on the issue of compulsory continuation schools. That Mr. Fisher has foreseen this is clear from the speech-making campaign that he has carried out. Employers will often urge that the practical difficulty of scheming a young person's time so that he or she may be absent from work for two afternoons a week is insuperable. There may be much in this contention. An alternative scheme that has great attraction is to make full-time education compulsory up to the age of sixteen, followed by voluntary attendance at classes. Not all Mr. Fisher's persuasive eloquence and whole-hearted sincerity will be able to convert parent and employer to an acceptance of these provisions.

The clauses dealing with medical inspection and physical training are all to the good; but there is one curious clause that appears to have slipped in by accident. Education is usually taken to include book-learning and, more recently, physical care; but all details of curriculum and the time-table are left to the schools or to the Board's Regulations—with this one exception: the Bill provides that in all public elementary schools there must be "practical instruction" (Clause 2), defined as we have already quoted (Clause 44). To make one subject of school instruction statutory without mentioning others is to give an exaggerated importance to that subject.

On the matter of inspection of private schools, Mr. Fisher or his advisers have not felt able to take a strong position, probably because of the practical and financial difficulty of finding inspectors enough. Pri-

vate schools may be inspected, and all other schools outside the State system, if they make application and the Board think fit to agree; but there is no compulsion. The only compulsion that is laid on schools of which the Board have no official knowledge, or of which such knowledge is not readily available, is to report themselves to the Board. This is entirely unsatisfactory. Another point that may arouse great dissatisfaction is the power that an unfriendly Authority may take for the compulsory inspection of a private school in its area. It works in this way. The Local Authority has the duty of seeing that every child in its area over fourteen years of age is under efficient education, either full-time or part-time. If a child claims exemption from the State continuation school on the ground that he or she is obtaining efficient education elsewhere, the Local Authority may inform itself by inquiry or inspection whether that education is efficient [Clause 8 (3)].

So far we have dealt with the provisions of the Bill that are bound to excite opposition. There are certain omissions that may be equally disastrous. No mention is made of the size of classes; there is nothing as to the salaries of teachers. Many thousands of additional teachers will be required for the continuation schools and for the increased number of the higher standards. It is on all hands admitted that elementary education cannot be satisfactory with classes of fifty and sixty children. The supply of teachers has been and is diminishing. If national education is to take a definite forward step, there must be more teachers. It is merely a question of economics in accordance with the system dominating the country at the time. The salaries paid must enable the men and women who adopt the teaching profession to live without undue anxiety such material lives as it is desirable that they should live. So long as there is free trade in education, if the parents refuse to pay the cost the children go without. Education has now become, in its greater part, a State monopoly, and the State is trying to give education to the children without providing suitable wages for the teachers. There can be but one result—a shortage of teachers. There is but one remedy—a very notable increase in salaries.

There is much in this Bill that is admirable and there is much that will one day be carried out; but discussion of its provisions sounds somewhat hollow as its chances of getting on the Statute Book are slight.

[On October 19, after this article was written, Mr. Bonar Law said that it would not be possible to pass the Education Bill this session and that no day would be assigned for Second Reading.]

THE Board of Education announce that, "if a student has interrupted his course at a training college for military service, the Board may pay a further grant for such complete number of years as may be required to enable him to complete the course of training originally approved for him, notwithstanding any proportionate grant for an incomplete year of training which may have already been paid."

## NOTES.

HEAD MASTERS and head mistresses of secondary schools are still uneasy about the effect of the Board's plan for Advanced Courses. Mr. Fisher's letter "Try it." to Mr. Wynne-Edwards will do little to allay anxiety. It reminds us of an answer given by a "great head master" on one occasion to his staff. He had made a proposal at a masters' meeting which was opposed by one member of the staff after another. He listened in silence to all the criticisms and then quietly remarked: "Well, gentlemen, we will try it for next term, and you shall tell me how it works." The fact is that the whole scheme is the natural result of government from central headquarters with an insufficient knowledge of local conditions. The Board start with the admitted fact that smaller schools cannot maintain a staff of specialists in all subjects of school teaching. They are anxious to ensure that every child shall have an opportunity of the best teaching in the subjects that he or she shall select. On paper there is nothing more simple than to decree that each small school shall be content to make itself efficient in a single line, and that pupils must choose the school that offers the line they need; but in practice schools are chosen for a variety of other reasons, and no edict of the Board is at present powerful enough to outweigh the other reasons. Secondary schools will therefore continue to "muddle on," doing their best—and a very good best—for such pupils as come to them.

THE London County Council possess a sufficient staff of school inspectors, and they would naturally like to have powers to inspect all private schools. So, no doubt, would other counties were it not for the cost. The desire is a natural one. Officials who deal with the education of an area are balked in the efficiency of their organization by the existence of a number of schools, unevenly situated in the area, whose precise aims are unknown and whose position in the general scheme cannot be precisely determined. It seems to us that it is right that schools under private ownership should be recognized as part of the educational provision of the area, and that for this purpose they should be officially known and registered in the office of the Local Education Authority. Information as to the general aim of the school, the number and qualifications of the staff, the number and classification of the pupils should be filed. Even if a school consists entirely of boarders, and is therefore non-local, it should still be registered in the office. Private schools should welcome inspection that should help to give them recognition as part of the educational provision of the area. For this a new race of inspectors is needed, who shall be without the suspicious, policemanlike attitude

of men whose traditional work is to see if the Parliamentary grant is properly spent.

WE have received from the Decimal Association a renewed appeal to the country to adopt a decimal coinage. Traditional usage is very hard to overcome. There are towns in England, even not far removed from London, in which ancient weights and measures unknown to modern arithmetics are still used. We have grown up with the penny, and its removal will be as difficult as it will be to effect a change in our picturesque but inaccurate spelling. The appeal that we have received is signed by names known well in the outer world. It must be left to them to effect a reform. Teachers have done for many years what is in their power to do: no boy or girl of ordinary intelligence leaves school now without considerable experience and skill in the use of measurements of length, capacity, and value based on a decimal system. The particular point of this appeal is to show that the penny has broken down as a convenient unit of value. Among the poorer classes who purchase small quantities of cheap commodities there is need of a copper unit that will more readily subdivide. To the small trader, half of 3½d. naturally becomes 2d. He gains: the purchaser loses.

THE Examinations Council is now established, and all State secondary schools, by means of a bribe of £2 per pupil, are plunged deeper into the lifelessness of bureaucratic control. For the Council has no power to act without the approval of the Board. Since the Board's plan was first introduced, in 1914, this paper has steadily pointed out the dangers involved; but we searched other papers in vain for support in our view until the issue of September 20 of *The Times Educational Supplement*, a paper that is always ready to give the Board the utmost possible credit for its policy. One of the leading articles in this number takes a line that is in harmony with the views already expressed here. The writer says: "The Board, however, has resisted all attempts by skilled educationists to secure a modification of the scheme, and has, indeed, increased its bureaucratic character by failing to make provision for the representation of the professions on the Council. Official control over a compulsory scheme of secondary-school leaving examinations has been established. It is curious to find to-day an official reaction towards methods that have proved dangerous on the Continent in the field of secondary and higher education. We should do well to avoid this evil here." Again: "Neither the professional bodies, nor the trade unions, nor the great manufacturers are to be represented on the Council."

WE are asked to bring to the notice of our readers

*Orthopsychics.* the educational programme of the Society for the Study of Orthopsychics. The objects of the Society are the study of human character, social and individual, and of the conditions of its proper development and control; the training of students in applied psychology; and the promotion of general interest in this subject by lectures, discussions, and other means. Three courses of study are outlined: a general course, a post-graduate course, and a social workers' course. Examinations will be held, diplomas given, and a register of orthopsychic workers maintained. Public lectures will be given and discussions arranged. The Council includes many names well known to educational science; the Committee of Education and Research consists of Mr. C. Burt, Mr. J. C. Flügel, Miss J. M. Murray, Prof. Percy Nunn, and Miss J. Turner. The Hon. Secretary is Dr. Ll. Wynn-Jones, 30 Brunswick Square, London, W.C.1.

MADAME MONTESSORI is organizing in America a new piece of war work. This is known as the White Cross. The White Cross "is a body designed to treat the children of war: to gather up the new human generation and to save it by a special method of education." A free course of preparation is being established in which volunteers will be trained "in first aid, knowledge of nervous diseases, dietetics for infants and children, isolation, special psychology, domestic science, agriculture; language, and a theoretical and intensely practical course in the Montessori method as specially applied to these children." Groups of trained workers will then be sent out to the countries which have been devastated by war, and an attempt will be made to restore to normal activity and joy the minds of children who have been terrified and crushed by the horrors they have suffered. The work is worthy and we wish it success; the need will continue for some years after the war is over.

IT used to be supposed that women often wished they had been born men in order that a life of greater activity and usefulness might be open to them. The war has changed all that; no woman to-day need sit down, like one of Miss Austen's heroines, and lament her ineffectiveness. But effective work implies suitable training. Of this there is no lack. The Ratan Tata Department of Social Science and Administration in the University of London announces a special course of training for welfare supervisors and other social work, whether professional or voluntary. It would be difficult to find a better use for the Ratan Tata benefaction. Particulars may be had from the London School of Economics, Clare Market, Portugal Street, Kingsway, London, W.C.2.

"THE British Association has on several occasions

*Science in  
Secondary  
Schools.*

exerted a formative influence upon the teaching of science in secondary schools." These are the opening words of a very valuable and complete report recently issued on Science Teaching in Secondary Schools by the British Association (Burlington House, London, W.1; 1s. net). Dr. E. H. Tripp, until recently himself a science master in an English public school, is the secretary. There are chapters on the present position of science teaching in secondary schools of different types, on the time required, on methods, on the supply of teachers, and on inspection and examination. Typical science courses are laid down by Mr. Archer Vassall, Mr. F. W. Sanderson, Prof. Percy Nunn, Prof. H. E. Armstrong, and others. There are also appendixes on salaries, science subjects in girls' schools, laboratories, and staffing in girls' schools. The report should be studied by all teachers of science; we wish we had space to reproduce some of the specimen courses.

FEW words are more abused or used in more contradictory senses than the unfortunate term "vocational," as applied to education. To a member of the Workers' Educational Association the term at once arouses fury and calls up pictures of unfortunate adolescents drilled in knowledge narrowing to their own mental development, but useful to the employers as turning the young people into better money-making tools. There is, indeed, some excuse for this view; though we regret its violence. We still hear in public speeches that the need for greater effort in education is that we are confronted with a struggle against a nation better equipped economically than ourselves. That nation is, of course, Germany. But it must not be forgotten that the splendid system of vocational training, known to English readers largely through the book by Dr. Kerchensteiner published shortly before the war, involves the selection of young people and training them for industrial pursuits according to the alleged needs of the industries and without any volition on the part of the children. The son of a chimney sweeper in Germany is trained to be a chimney sweeper as a matter of course, unless it happens that there are too many chimney sweepers in the town. This is a state of affairs that we could not suffer in England, and the Workers' Educational Association is right in protesting against any attempt on the part of employers to carry out such a violation of democratic freedom.

BUT, in their fight against the introduction of vocational education into secondary schools or continuation schools, the Workers' Educational Association lay insufficient stress on two important factors in education. In the first place, an admixture of manual work in the time-table, in some form or other, laboratory work, woodwork or metalwork, is a valuable help to

the growing powers of the boy or girl; it is believed by modern psychologists that the brain does not develop its best powers unless the hands are used as well. And yet the W.E.A. view all manual work as unnecessary and an attempt to deprive the pupil of part of the intellectual education that is due. The second point is that no subject of school study possesses such a real and lively interest to the pupil as the subject connected with the destined occupation after school is left behind. In almost all occupations that are followed by the better-to-do classes vocational training is the rule. The doctor, the chemist, the nurse, the schoolmaster, the clergyman, the architect, and many others go through a course of vocational training and are the better for it. The engineer and mechanic should have the same advantage. He should not wait for the training of the workshop to discover how to co-ordinate the activities of his fingers with the activities of his brain.

THE more complete supply of educational opportunities that is indicated for the near future needs also a marked increase in the number of teachers. In order to secure this additional supply Mr. Fisher has already foreseen that large sums will have to be spent in raising salaries. Mr. Fisher also claims that the financial condition will not be satisfactory until adequate pensions are secured. The financial aspect is important. Men and women, apart from the few enthusiasts, cannot be expected to flock into a profession in which the conditions of living are made especially difficult. But there are other things as well. Teachers must be treated with the consideration due to their position and the importance of their work for the nation. The Board of Education have gradually improved in their treatment of teachers, and the improvement will, we trust, continue; but many Local Authorities still continue to treat teachers as an undesirable but necessary nuisance, to be snubbed and browbeaten when possible. It is the dislike of the probable unpleasant experience of the behaviour of the Local Education Committee that keeps away numbers of people who would be glad to take up teaching if they could be sure of considerate and respectful treatment.

WE learn from the *Schoolmaster* that proposals have been put forward that the National Union of Teachers "should enter into alliance with the Labour Party." The decision on the point will prove of considerable importance in the future development of the Union. Whatever that decision may be, the fact that the proposal has been put forward indicates an increasing articulateness on the part of the classes who make use of the public elementary schools and a growing determination to take a share in the control of education. In 1870 it was the more enlightened portion of the

educated classes which said that education must be provided for all children. Now there are one or two generations of educated parents; and they are gradually coming to understand the value of education and they are developing views as to what that education should be. This movement is all to the good. Too long have the people's schools been governed by well meaning bureaucrats. The Workers' Educational Association has shown that the people themselves are beginning to study and understand the problems of education and are prepared to take a larger share than before in controlling it and in making it fit the needs of their children. It is fortunately no longer necessary to urge the necessity of education; the point in dispute now is the form that education shall take.

MR. J. L. PATON has recently given a valuable address on the subject of scouts. *Scouts and Discipline.* The war has caused the removal of many scoutmasters, and in some areas companies seem to have languished for want of control from above. Such, however, has not been Mr. Paton's experience. He has found that the boys have risen to the occasion and have shown themselves capable of managing their own discipline, much as the occupants of the Little Commonwealth have done. The absence of scoutmasters may, indeed, prove a blessing in disguise if it enables the boys to develop their own powers. This is what Mr. Paton had to say upon this point: "How was the better discipline secured? In the same way as all the other qualities of scout training—by basing it on the boy himself. The spring of vitality in discipline, as in all their activities, was from below, not imposed by officers, but developed and upheld by the boys themselves through the Court of Honour. The growth of the Court of Honour had been accelerated by the withdrawal of scoutmasters owing to the war. Many a troop was managed entirely by the patrol leaders. The Court of Honour met every night; it discussed questions of supply and finance and all matters of general management and conduct, so that any breach of scout law was at once brought before a committee of scout boys themselves. Minutes of meetings were kept. The Court of Honour . . . was the organ of self-government. The discipline came from within, grew from within, and was controlled by the community itself."

THE Classical French Theatre Association has come to a very vigorous birth. The Association is formed "to present, with the aid of the French National Theatres (the Comédie-Française and the Odéon), in a manner worthy of their best traditions, some of the best works of French dramatic art from the time of Corneille up to the present day." Performances may be given to an individual school, to a group of schools, or in public

halls. The Association aims at no private profit. When an adequate reserve fund has been built up, any profits will be devoted to the provision of bursaries for travel abroad. The names of the supporters of the scheme are sufficient guarantee of the genuine nature of the movement. Mr. Stanley Leathes is the chairman; Sir John McClure, treasurer; many important head masters, head mistresses, members of the dramatic profession, and Government officials form a large committee. Count A. de Croze is the hon. director. Subscriptions and donations are invited, and should be paid to the Hon. Director, 89 Fitzjohn's Avenue, London, N.W.3.

MR. H. A. L. FISHER, President of the Board of Education, has written a letter to Mrs. J. R. Green, President of the Historical Association, which has been published in the July number of *History*. The letter is dated from the Board of Education, which gives it partly an official character. The reason that we refer to it here is that it may indicate a change on the part of the Board's inspectors towards the teacher of French and the French lesson, and a consequent change in the secondary schools examination in French, which is now controlled by the Board. This is what Mr. Fisher says: "Boys and girls are supposed to learn French. They dip into a French grammar, they read a few fragments of French literature—perhaps, if they are lucky, they are afforded some exercise in the colloquial use of the language—but how many boys and girls who are supposed to have learnt some French in our secondary schools have the faintest notion of the French people, of the rôle which the French nation has played in the history of Europe, or of the general social structure of the country with whose language and literature they are presumed to have acquired some shadow of acquaintance?"

THE general increase in the cost of living, and in particular the rise in the price of food, is becoming a serious problem to the boarding school. The boarding-house master in the richer schools is popularly supposed to have made in the past considerable profits, and it is thought that he can bear a lean year or two; this may be true, but if it is so, it is only a fact in a minority of cases. The profits from boarding fees in the larger number of schools is not excessive: in recent times the standard of living has steadily increased, at, of course, a greater expense to the master. In the present crisis it is possible to give inferior food or less of it, or to give longer holidays. No one of these expedients is, in our view, wise. Growing children should have a sufficiency of nourishing food. The reasonable view is that parents should be asked to meet part, not the whole, of the loss that the schools are enduring.

An increase of 15 per cent. on the total fees would probably be found in most cases to meet about half of the increased cost, and this addition of 15 per cent. to their bills would probably be accepted by the great majority of parents as reasonable.

"EDUCATION," said Mr. Fisher the other day, "is far too serious a matter to be left to the educationists." He was addressing a meeting of business men, and his object was to make them take an interest in the subject. But the words might with equal propriety be addressed to teachers. All experts are inclined to belittle the opinions of non-experts. Teachers are experts, within certain limits, and they distrust (sometimes on good grounds) the views of parents and others of the general public. But teachers are, or ought to be, experts in the methods of giving instruction and in providing the suitable environment for the growth and development of the child. They have no monopoly of knowledge of what that instruction ought to be or what lines the growth and development ought to take. The carpenter is an expert in making book-shelves, but he is not necessarily called upon to decide what position in the room the shelves are to occupy. Teachers should welcome the expression of the views of parents as to the meaning of education. The position of schools in a country depends upon the recognition by the general public of the value of education.

SIR GEORGE NEWMAN'S Annual Report, as Chief Medical Officer to the Board of Education, contains serious warning and at the same time is a document full of encouragement and hope. The report shows how great is the amount of preventible ill-health and how the medical organization is gradually beginning to deal with the difficulties. "In a certain, though narrow, sense," says Sir George, "everything depends upon the child's physique. If that be sound, we have the rock upon which a nation and a race may be built; if that be impaired, we lack foundation and build on the sand. It would be difficult to over-estimate the volume of national inefficiency, of unfitness and suffering, of unnecessary expenditure, and of industrial unrest and unemployability to which this country consents because of its relative failure to rear and to educate a healthy, virile, and well equipped race of children and young people. There is no investment comparable to this, no national economy so fundamental; there is no waste so irretrievable as that of a nation which is careless of its rising generation." This is sound argument, and, lest he should appear to think only of the industrial machine, Sir George adds: "The goal . . . is a human personality, well grown and ready in body and mind, able to work, able to play, a good citizen, the healthy parent of a future generation."

## RECENT EVENTS.

### THE EXAMINATIONS COUNCIL.

IN the middle of September the President of the Board of Education announced the names of the Secondary School Examinations Council. This Council will assist the Board in the co-ordination of the hundred examinations for which secondary schools prepare their pupils. The Universities of Oxford and Cambridge have nominated their examination secretaries, Mr. Matheson, Mr. Gerrans, and Mr. Flather. Durham and Bristol are represented by their Vice-Chancellors, Sir Isambard Owen and Dr. Hadow. Dr. Walmsley represents London University. The Northern Universities have three nominations, Sir Alfred Dale, Vice-Chancellor (Liverpool), Professor Connal (Leeds), Miss Burstall (Manchester). The County Councils and the Municipal Councils each send a chairman and a director, Mr. Mellish (Nottingham), Dr. Snape (Lancashire), Mr. Dawson (Hull), Mr. Legge (Liverpool). The Association of Education Committees have not yet made a nomination. The Teachers Registration Council fill five places: Mr. P. Abbott, Miss Gadesden, Miss E. S. Lees, Mr. G. Sharples, and Mr. A. A. Somerville. The chairman is Mr. W. Temple; the secretaries, Mr. Christopher Cookson and Miss M. Kennedy. The scheme put forward by the Board in May is modified to the extent of withdrawing the proposal that the professional bodies should nominate two members. In compensation an extra seat is given to the Teachers Registration Council, and the Education Committees were asked to nominate a representative, Rev. Canon J. J. Scott. The Council will sit at South Kensington. Communications should be addressed: The Secretary, Board of Education, London, S.W.7, and the envelope should be marked "Examinations Council."

### ORDER OF THE BRITISH EMPIRE.

At the end of August the first list of appointments to this Order was issued. Prof. Ripper (Sheffield) is among the Companions of Honour; Prof. H. S. Jackson receives a K.B.E.; Miss Margaret Macmillan a C.B.E., together with Profs. W. H. Baker, W. H. Bragg, S. J. Chapman, F. W. Keeble, J. F. Thorpe; and a M.B.E. is given to Miss Rosa Bussett.

### HEAD MASTERS' CONFERENCE.

The Head Masters' Conference met this year in London during September. A resolution was passed expressing the opinion that the representation of teachers in schools should be not less than that of Universities on the Secondary School Examinations Council. It was pointed out that no head master of a secondary school had as yet been included in the Council.

### RUSSIAN TEACHERS.

At a conference of teachers of Russian, convened by the sub-committee for Russian Studies of the Modern Language Association, it was resolved that native Russian teachers wishing to teach their language in English schools should possess the following qualifications:—(a) The standard spoken Russian of the country; (b) an academic standing not lower than that of a Russian secondary school; and (c) a knowledge of English and a general experience of teaching modern languages. It will not always be possible for intending teachers to produce proof of the second qualification, and the M.L.A. sub-committee will interview teachers who wish to come before them, and will investigate personally their qualifications for the proposed work.

The Council of the Royal Colonial Institute have decided to award silver and bronze medals and prizes of books for the best essays sent in by boys or girls who are pupils at schools either in the United Kingdom or in the Outer Empire. There will be two classes—A and B. The subject for Class A (candidates over sixteen years of age) is "A Comparison of the British Empire and the Empires of the Past," and the subject for Class B (candidates above the age of thirteen and under sixteen) "The Work of David Livingstone as an Empire Builder." The essays are to be received at the Royal Colonial Institute, Northumberland Avenue, W.C.2, before March 31, 1918, and the regulations can be obtained from the Secretary.

## THE COLLEGE OF PRECEPTORS. HALF-YEARLY GENERAL MEETING.

THE ordinary Half-yearly General Meeting of the Members of the Corporation was held at the College of Preceptors, Bloomsbury Square, W.C.1, on Saturday, the 27th of October.

Prof. JOHN ADAMS was appointed Chairman.

The minutes of the last meeting were confirmed.

The Report of the Council was laid before the meeting, and was taken as read, a copy having been previously sent to every member of the College. It was as follows:—

### REPORT OF THE COUNCIL.

The Council beg leave to lay before the members of the College the following Report of their proceedings since the issue of their last Report:—

1. A Course of Twelve Lectures to Teachers on "The Essentials of Education Psychology," has been delivered by Professor John Adams, and a Course of Twelve Lectures on "The Ideal and the Actual in Present Day Education," was begun on the 27th of September.

2. (a) The Midsummer Certificate and Lower Forms Examinations were held on the 25th to 30th June, and were attended by 2,720 candidates.

Through the generosity of the Rev. H. A. Soames, the Council will in future be enabled to offer a Prize for Scripture History at the Midsummer Certificate Examination. Mr. Soames has presented the College with £50 2½ per cent. Consols for that purpose.

(b) The Professional Preliminary Examination, held on the 4th to 6th September, was attended by 189 candidates.

3. (a) The Examination which was conducted by the Council on behalf of the Newfoundland Council of Higher Education was held at 188 Centres on the 25th to 30th June. The total number of candidates examined was 3,586, viz. 6 in the Senior Associate Grade, 87 in the Junior Associate Grade, 704 in the Intermediate Grade, 1,453 in the Preliminary Grade, and 1,336 in the Primary Grade.

(b) At the request of the Governors of Sir Robert Hitcham's School, Coggeshall, the Council have conducted an Examination for Secondary School Exhibitions and Junior Technical Exhibitions.

4. Since the issue of the last Report six members have been elected, and five have withdrawn from membership. The Council regret to have to report the death of the following members:—Miss K. Cahalan, L.C.P., Miss J. M. Cazalet, Mr. M. C. Maccormac, A.C.P., and Mr. C. Jepp. Mr. Maccormac died in defence of his country; he was killed in action.

5. Copies of the College Calendar for 1917-1918 have been sent, without charge, to all life-members and subscribing members.

6. Grants amounting to £39. 10s. have been made from the Benevolent Fund.

7. (a) Representatives of the Council have taken part in the work of the Teachers Registration Council, the Federal Council of Secondary School Associations, the Teachers' Training Committee, the Joint Scholarships Board, the Committee of the Conference of Educational Associations, the League of the Empire, the Secondary Teachers' War Relief Fund Joint Committee, the Joint Scholastic Agency, and the Joint Agency for Women Teachers.

(b) *Teachers Registration Council.*—Up to and including Thursday, the 13th September, 1917, the number of applicants for admission to the Register was 19,266.

The Second Edition of the Official List of Registered Teachers is now in preparation, but it is doubtful whether the circumstances arising from the War will permit of its being published at the beginning of next year. In the meantime the Council is about to issue a special circular urging that the various Associations represented among its numbers should make a special effort to inform their members of the importance of becoming registered without delay.

In August a Deputation from the Council attended at the Board of Education and submitted to the President of the Board certain reasons why the number of teachers on the proposed Secondary School Examinations Council should be increased. The request of the Deputation was granted.

The Council has also had under consideration the preliminary draft of the Regulations for Technical Schools, and has submitted a Report to the Board thereon. A Series of Resolutions on Reconstruction in Education has been prepared and was issued to the press in August last. At the present time the Council is engaged in the consideration of the proposals in the Education Bill and of the Report of the Commission on Civil Service Examinations.

(c) *Federal Council.*—Your representatives duly attended the June meeting of the Federal Council. It was reported that the Board of Trade was not favourable to any railway concessions being made to pupils and masters travelling to and from Secondary Schools, and that the Council's Resolution condemning the practice of giving free places to children in schools merely because they promise to become teachers had been conveyed to the various Local Education Authorities.

Circular 996 of the Board of Education was considered, and the Council recorded its opinion that the representation accorded to Secondary Teachers and Professional Bodies on the School Examinations Council is quite inadequate.

(d) *League of the Empire.*—The educational work of the League has this year to some extent been held over in favour of work for the many urgent necessities of the War. The Summer Meetings of the Imperial Union of Teachers have been regularly carried through each year. The meeting this year was enlarged into an interesting Conference on the spiritual ideals of some races—the Anglo-Saxon, the French, the Russian, and the Indian—and the means that may be taken for ensuring to the child the spiritual equipment which is needed for his own development and for doing good service to the world.

Within the year the League has presented, on the part of the women and children of the British Isles, silk flags and specially engraved shields to all the Overseas contingents now fighting for the Empire. A Committee of the League has also been appointed to carry out Mrs. Holman-Hunt's scheme for presenting to each totally disabled soldier a specially bound volume of Shakespeare in memory of Lord Kitchener.

The work of the War Depot has been carried on actively, and in all nearly a million gifts have been despatched to institutions and to soldiers in the trenches; to the Red Cross Associations of the Allies as well as to our own hospitals.

The Correspondence Branch of the League numbers now over 36,000 members.

H.R.H. The Duke of Connaught has become Hon. President of the League, and H.M. Queen Alexandra and H.R.H. Princess Louise, Patrons.

(e) *Joint Agency for Women Teachers.*—During the summer months the number of new posts entered on the books has exceeded the number of teachers. The dearth of science and mathematics teachers is particularly noticeable, the proportion of these teachers to posts being about 1 to 10. The Agency has filled 194 posts during the months of June, July, and August—and of these 41 were in boys' or mixed schools. The increase of work, due largely to applications from boys' or mixed schools, has necessitated an increase in the clerical staff.

(f) *Joint Scholastic Agency.*—The number of vacancies notified during the past year was considerably in excess of the number notified during the year 1915-16, whilst, despite the fact that a much larger proportion of the vacancies had to be filled at short notice, when many would-be candidates, owing to the terms of their agreements, were unable to apply, the number of posts filled was much the same as the number filled during the previous year. The scheme of incorporation has been discussed in detail, and it is hoped that the Agency will be duly incorporated in the early autumn.

The Report of the Council was adopted.

The DEAN presented the following report:—

#### THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you some details concerning the Midsummer Certificate and Lower Forms Examinations, together with extracts from the reports of the Examiners.

The examinations were held on the 25th to the 30th of June at the following places in the United Kingdom:—Aberdeen, Alnwick, Battersea, Belfast, Belper, Bentham, Beulah Hill, Birmingham, Blackburn, Blackpool, Bournemouth, Brighton, Bristol, Cardiff, Carmarthen, Carnarvon, Cheltenham, Cork, Croydon, Dumfries, Eccles, Edinburgh, Exeter, Farnborough, Forest Hill, Frome, Glasgow, Grove Ferry, Highgate, Holyhead, Huddersfield, Leeds, Leicester, Liverpool, London, Lostock Gralam, Manchester, Margate, Mayfield, Mountmellick, Newcastle-on-Tyne, New Quay (Cardigan), Newquay (Cornwall), Nottingham, Ongar, Pencader, Plymouth, Pontypridd, Portsmouth, Richmond (Surrey), Rochester, Rugeley, Scorton, Sevenoaks, Sheffield, Southampton, Southport, Sunderland, Taplow, Taunton, Wandsworth Common, Wellington (Salop), Wem, Westcliff-on-Sea.

The Examinations were also held at the following Colonial Centres:—Castrics (St. Lucia), Cape Coast Castle, Colombo (Ceylon), Georgetown (British Guiana), Gibraltar, Kuala Lumpur (F.M.S.), Malta, and Rangoon.

The total number of candidates who sat for the Certificate Examination was 2,076\*—1,478 boys and 598 girls.

The following table shows the proportion of candidates who passed in the grade for which they were entered:—

		Examined.	Passed.	Percentage.
BOYS.	Senior .....	145	64	44
	Junior .....	627	392	63
	Preliminary .....	454	371	82
GIRLS.	Senior .....	115	46	40
	Junior .....	234	157	67
	Preliminary .....	138	124	90

\* Not including candidates examined at the Cape Coast Centre.

The above table does not take account of those candidates who obtained Certificates of a lower grade than that for which they were entered, nor of those (363 in number) who entered for certain subjects required for professional preliminary purposes.

The number of candidates who sat for the Lower Forms Examination was 644—445 boys and 199 girls. Of these 341 boys and 152 girls passed, or 77, and 76 per cent. respectively.

## EXTRACTS FROM EXAMINERS' REPORTS.

### Scripture History.

**Senior.**—The number of papers that would be classed as "excellent" was smaller than usual, but the number of "very good" was larger. A few confused the conditions laid down for discipleship, and the sacrifices involved, with the instructions given to the Seventy in Chapter X. Those who took the First Epistle to the Corinthians had formed a very imperfect conception of what was in St. Paul's mind when he wrote, and therefore could not reproduce his doctrine.

**Junior.**—Some very creditable work was done on the difficult period of Ezra, Nehemiah, and Haggai. The inability of many candidates to state the chief points in the Baptist's preaching, or to write a simple account of the aim of St. Stephen's speech, indicates the need of devoting more thoughtful attention to passages in which there is something more than a mere statement of facts. This criticism applies also to the answers on the Parable of the Sower, in which the Parable itself was usually repeated correctly, but the explanation of it seldom given with accuracy. Candidates during their preparation should write out names with the spelling of which they are unfamiliar. Questions on context were usually answered well.

**Preliminary.**—As a whole, the work of this grade reached a very satisfactory standard, and much of it showed honest preparation and intelligent teaching.

**Lower Forms.**—The work as a whole was good; in particular, the papers on St. Luke's Gospel showed honest preparation.

### English.

**Senior.**—The general result was quite satisfactory. The plays of Shakespeare ("Macbeth" and "Henry V") were both well known, though there was a tendency to reproduce notes and answers in a somewhat stereotyped form. Milton's "Samson Agonistes" had been profitably read by nearly all, and the knowledge of the Sonnets was also good. "Silas Marner" had evidently attracted all who had read it; the answers almost without exception showed interest and intelligence. The Grammar paper was not nearly so good. The passage given for analysis led to some wild shooting in naming subordinate clauses, and even when these were correctly named the connexions were often wrongly described. Many did not know what a relative pronoun is; "it" was the word frequently selected. The meanings of the words given were understood by only a small minority; the metaphorical expressions were known better. The question on peculiarities of grammar led to much irrelevant writing. Only one or two recognised the prepositional character of "like."

In the Essays many wrote on the "command" instead of the "freedom" of the seas. Though brevity in an essay is a good fault, it was rather overdone by a number of candidates.

**Junior.**—The bulk of the candidates did good honest papers, and there seemed to be less scamped work than usual. Both the plays of Shakespeare had been studied throughout: marks were earned more freely in "Henry V" because that play excited the sympathy and vigour of the writers. Scott's "Lady of the Lake" was very minutely known by those who offered it. Less than a dozen took Tennyson, but these were successful. In spite of the length of Southey's "Life of Nelson" and its crowd of detail the candidates who took this book had evidently read it throughout, and with care.

The Analysis was in the majority of cases very intelligent; but the Parsing was even more feeble than before. Little was known about the common English metres, their accents, or their names.

The Essays were a good average, but brilliance or charm of style was exceedingly rare.

**Preliminary.**—The set books were accurately known, and the answers satisfactory. In Grammar the analysis was well done, but in some papers the words *the* and *this* were not recognised as adjectives. The question on alliteration turned out to be a surprise which caught almost every candidate unawares. It was bravely attacked: "poetic licence," "inversion," and "euphony" being invoked to explain it. The composition was sometimes very good, and the spelling was satisfactory. The breathless running-on of all the essay in one period seems to be dying out; but more commas would be valuable.

**Lower Forms.**—Grammar: The Analysis was weak, particularly in the treatment of the verb *to be* and the imperative mood. The

majority of candidates had apparently not been trained to see that the function of a word in a sentence settles what "part of speech" it is, so that the word cannot be parsed apart from the sentence. Many candidates showed no knowledge of grammar at all, but to some few grammar had been made an exercise in clear thinking and the skilful use of words. Only one or two recognised the infinitive as a noun.

Dictation, &c.: On the whole, the spelling was good, and in most instances the piece was well written.

Composition was on a much higher level than usual. Stops, capital letters, inverted commas, &c., were evidently regarded as essentials, and frequently quite accurately used. Candidates should not try to reproduce for composition as they would for dictation. The story is read in order to give material for the imagination to construct a living picture within the mind; it is this picture which should be described. The constructive, picture-forming power requires more cultivation.

Hand-writing: Capital letters require more attention. The object of writing is to be read; legibility therefore is its chief virtue. Much of the writing was eccentric and hard to read.

Literature: The answers in narrative form were very well done indeed. The memory work also was good, except for punctuation; a very few candidates excelled in this, but the majority either ignored it altogether or put uniformly commas or full stops at the end of all the lines. Few seemed to know the meaning of "quote" in B 4, and many merely mentioned the poems in which the phrases occur. Difference in metre was usually interpreted as difference in subject-matter or in tone or sentiment, as of joy or sorrow.

### English History.

Senior.—Attention is called to the following points:—(1) The hopeless confusion of the weaker candidates. The very justifiable attack on the old method of learning strings of dates is, perhaps, being pushed too far—a few leading dates are not only useful, but essential. (2) Some of the stronger candidates seize on a favourite question and answer it at far too great a length. Hence in an answer dealing with the Revolts under the Tudors it was quite a common thing to get two pages on Perkin Warbeck's Revolt (where a few lines would suffice), whereas the Pilgrimage of Grace would be overlooked altogether. (3) Too many candidates are unable to "reason," or fail to read the questions carefully; answers to questions calling for a little thinking are too often a bare record of facts—*e.g.*, the importance of the reign of Stephen became a chronicle of the events of the reign, and the importance of the reign of Richard I was an account of the Third Crusade. "Stick to the question" is a golden maxim for examination candidates.

Junior.—The work as a whole compared most favourably with that of this grade a few years ago, and, though the answers of those who failed showed a certain vagueness and confusion of periods and centuries, they were free from the gross blunders that have often marked the unsuccessful papers in former years. The work of the majority—that is, of those who passed—showed a still more satisfactory improvement. The points of the question were better seen; the answers were more detailed and more accurate, and showed an intelligent grasp of the subject that should be full of encouragement to teachers.

Preliminary.—Questions on warlike heroes, like the Black Prince and Henry V, produced the best answers, but few seemed to know much of what the Navy has done apart from Nelson's battles and the defeat of the Armada. Intelligent accounts were nearly always given of the benefits conferred by Roman civilization, and of the reasons why Great Britain became a great manufacturing country. Very few showed any signs of understanding Parliamentary history. Joseph Chamberlain is practically unknown to candidates of this grade, while many repeated the old statement that John Wesley became Duke of Wellington. Many stated that Clive suppressed the Indian Mutiny. Frederick II of Prussia was often described as our ally against Napoleon.

Lower Forms.—Candidates who had obviously only used the "Historical Readers," or collections of anecdotes, showed too often complete lack of any sense of time—a story would be remembered and applied to a person five or six centuries earlier or later than the true hero. These "Readers" require to be supplemented by an outline of dates and facts if they are to be of any educational value.

### Geography.

Senior.—The answers showed a fair knowledge of the geography of the world and the principles underlying the subject, but much was imperfectly understood, and the answers were often inappropriate repetition of what had been gleaned from textbooks. The map of the mountain lake (Question 1) was in some cases excellently done, but some few candidates obviously did not understand contours, and very few could do more than guess where the lake was likely to be shallow. The question on projections was selected by most candidates, and many attempted to describe a method of projections without the aid of a figure. Nearly all showed some knowledge of the subject, but many of the answers showed confusion. Practically all

who chose Question 6 displayed a very fair idea of how a delta was formed, and, though some referred to lacustrine deltas, no candidate suggested that such deltas might be found in the British Isles. The most prevalent errors were confusion between striation and stratification; a tendency to connect "Para" rubber with Paraguay or Parana, and to regard the surface of Sahara as level and covered with sand. The usual confusion of East with West was still present. Many of the diagrams were excellent, but the composition of the written work left much to be desired.

Junior.—The papers were of about an average quality compared with those of preceding years, though characterised by the most extraordinary variations. Of the various sections, that on Australia gave the best results, and that on Physiography the worst. The contour map in this latter section was usually done badly, or not at all. A number of schools are not yet awake to the practical value of teaching contours. Throughout there were more gross errors in this section than in any of the others. Two items were unknown by most, viz. the meaning of the expression, "a natural region," and the locale and importance of the Canadian asbestos industry. Otherwise the great majority of the candidates seem to have had little difficulty in doing themselves justice as far as the scope of the paper was concerned. There was the usual absence of sketch maps and diagrams in illustration of answers, and many otherwise good maps were marred by carelessness, *e.g.* rivers crossing their own watersheds, and towns without any indications (dots or otherwise) of their position.

Preliminary.—The chief faults were: (a) Failure to define estuary and isthmus and to give examples from Europe or the Empire as requested. A considerable number gave the Pyrenees, and a smaller number the Cheviots, as typical examples of an isthmus; (b) Belgium was described too often as very dry and Italy as very wet, because the former was flat and the latter hilly; (c) failure to appreciate the importance of situation on the growth of a town. York was invariably described as the centre of the woollen and coal industries; (d) the Danube valley might have been better known.

Lower Forms.—The weak points had reference to industries (Questions 2 and 6). Few candidates could give reasons for density of population or for the location of industries, and few understood what china clay and tinplate were. On the other hand, the question on the meaning of certain geographical terms was well done, and many gave good descriptions of certain districts of Great Britain. The marks for the maps would have been much higher if the candidates had been taught to indicate the situations of towns by dots.

### Arithmetic.

Senior.—The errors for the most part were due to inaccuracy, but there were in some cases errors of principle, such as, Question 2, confusing  $5280 + 54 \times 3 \cdot 275$  with  $(5280 + 54) \times 3 \cdot 275$ , or, in many cases, cancelling  $3 \cdot 275$  between numerator and denominator, with no principle at all; Question 5, taking  $\frac{3}{7}$  and  $\frac{4}{7}$  as the earned and unearned proportions of the total income, the question being thus totally misinterpreted; Question 7, calculating the interest on the amount, or taking five times  $104\frac{1}{2}$  as the amount derived from £100 at the end of the five years; Question 9, incomplete decimalisation of  $3\frac{1}{2}$ .

Junior.—The easier questions were usually done well, but a large proportion of the candidates failed to realise the importance and use of factorisation. The "cost" sum was done accurately by the majority of those who used the simple method of practice, but those who used methods involving them in heavy fractions or decimals seldom obtained the correct result. In the harder questions many candidates were quite unacquainted with the principles involved—*e.g.*, in Averages and Percentages. In the latter many attempted to estimate a percentage profit on the quantity of material involved instead of on the cost price. The decimal work was poor, and showed a want of appreciation of the value of figures beyond the decimal point. The relations between linear and square measure did not appear to be generally known. The papers showed some improvement in the method of setting out the work, but much still remains to be done in this direction.

Preliminary.—Some failed with No. 1 and No. 4, the former a question in Short Division by factors, the latter involving a change of rate from miles per hour to feet per second.

Lower Forms.—Although there were very few failures, neither the general quality of the work nor its neatness was quite up to the usual standard. Marks were too often lost through copying down a question incorrectly. Some of the methods of multiplication and division were cumbersome, and involved an unnecessary number of figures, as, *e.g.*, when a simple number was divided successively by 4 and 5 or by 2 and 10, instead of by 20 in the usual way.

### Algebra.

Senior.—In very many cases it looked as if the elementary portions of Algebra had never been mastered, or else that the candidates had been allowed to get very rusty in the earlier part, while being

rushed on to indices, ratio, &c. In particular, some very bad work was shown on factors and equations, and in the treatment of a simple problem.

**Junior.**—There was too large a number of candidates who understood little or nothing about the subject, and who with perfect indifference attempted all questions, easy or hard. These pupils should be trained to attempt only to solve questions they understand, as one or two perfect solutions of the easiest questions on the paper would be much more satisfactory alike to the examiner, the teacher, and the pupil. Many candidates had a very imperfect knowledge of fractions. Much inaccuracy was shown; teachers would therefore do well to insist on pupils verifying their results. The question on graphical methods was seldom attempted, and very often the work sent up in answer to it was worthless.

**Preliminary.**—The direct questions involving simple calculation of an arithmetical kind were often accurately answered. Those requiring some further perception of algebraical meaning and methods were in some cases well answered, but in the majority of the papers the answers to such questions were worthless. Very few candidates had any idea of what was meant by the verification of the answer to a multiplication question by substituting a simple value of a variable. Easy equations and factorisations where the coefficients were literal led to blunders of a gross kind. In many centres the work was very neatly written out, but there are still far too many where the writing and figuring are extremely careless.

**Lower Forms.**—Some excellent papers were sent in, creditable alike for neatness, accuracy, and grasp of the subject. On the other hand, a good many candidates showed the most meagre knowledge of elementary Algebra, and many wrote out their work very badly. Questions in simplification and substitution of values were often carelessly worked, and sometimes led to gross errors of principle. More success was shown in multiplication, division, and factorisation as long as the coefficients were numerical. When numbers were represented by letters, even good candidates showed an extraordinary tendency to confuse multiplication with addition.

### Geometry.

**Senior.**—A majority of the candidates seem to have some knowledge of the simple bookwork, but give little evidence of geometrical power (practical or theoretical).

**Junior.**—Many of the figures were badly drawn, the lettering being indistinct and often confused, owing to one set being superimposed upon another. In many instances in Questions 1 and 4 the converse propositions were given. In the majority of cases but one part of Question 2 was set out. In Question 6 the figure was often ineffectively drawn, and the proof offered was special and numerical.

**Preliminary.**—There is very much room for improvement in describing constructions. In Theory, identical triangles were fair; the proof of the properties of parallels was weak. In the Practical part parallels were good, and bisections and triangle-making, except the ambiguous case, were fair.

**Lower Forms.**—In Question 2, where perpendiculars were asked for, medians were often drawn. In Question 3, candidates asked for a parallel drew a perpendicular, and called it parallel. In Question 5, asked for a quadrilateral, they drew a pentagon. In Questions 4 and 5 it was not rare to find two points both lettered D.

### Trigonometry.

Failure, in very many cases, was not so much due to ignorance of Trigonometry as to blunders in Arithmetic, in Algebra, and in the use of logarithms. Many candidates, who could not use their logarithms correctly, preferred to use them in the right-angled triangle problem, which should have been solved by the tangent. This seems to show bad teaching; the right-angled triangle, and the problems upon it, should be thoroughly mastered before going on to the general triangle.

### Mechanics.

**Senior and Junior.**—In both these papers the work of the candidates is open to the same criticism—namely, that they regard the subject as a collection of formulæ instead of trying to grasp its elementary principles. This frequently leads to their showing up an unintelligible mass of figures without any explanation as to what the figures represent. There seemed more confusion than usual between "pound" and "poundal." For a practical knowledge of the subject it is better to avoid the latter unit altogether.

### French.

**Senior.**—The grammar was very fair on the whole, but only three obtained full marks for the question upon some of the commonest and most useful verbs in French. There were two who attempted the phonetics, and, judging by the results obtained, the others were prob-

ably well advised to take the alternative question. In composition, many of the renderings of the "Alice in Wonderland" piece were very good. The only surprising fault was the almost universal failure to translate "She was about a foot high," the constructions with *avoir* and *être* being muddled even by some of the best candidates.

**Junior.**—In general the work was poor; many of the papers showed that the teaching had been weak—without aim and without sufficient determination to reach a definite result. In the translation into English there was too much wild guessing, often with a total disregard for sense. The free composition, or translation into French, was, in too many instances, a confusion of transliterated English. This defect is inevitable so long as the Grammar section shows so much weakness. Few candidates could replace nouns, objects of the verb, by pronouns with any degree of certainty; sentences like *Je donnerai les à lui* were common. Too many candidates used simple words, like *cela*, incorrectly: *Cela fille, cela livre*, &c., were often met with. Consequently, in attempting the translation into French, blunders like, *Est-il Henri? Oui, il est il, or il est lui* (for "Is it Henry? Yes, it is he") were often made; also, *Vous êtes comme grand comme Je* for "You are as big as I," &c.

Before pupils attempt translation or simple composition, they must know the elementary syntax rules properly, and when writing French they must be on the alert to use them correctly. Very few candidates showed any knowledge of phonetics. Those who attempted to transcribe their pronunciation did so, except in three or four instances, by an improvised system of reformed spelling of their own. It should be understood that a recognised set of symbols (preferably those of the Association Phonétique Internationale) must be used.

**Preliminary and Lower Forms.**—The results were more satisfactory than those of the preceding examinations; but there were still too many failures, through insufficient vocabulary and ignorance of grammar, chiefly in the verbs and concord. Not one candidate gave a good answer to the question on phonetic symbols; those who attempted it generally gave an English imitation of the sounds.

### Spanish.

**Senior, Junior, and Preliminary.**—Grammar needs more attention in all grades.

### Welsh.

**Senior.**—The grammar was in no case thorough. As much attention should be paid to the grammar of the native language of the candidates as is given to a foreign language.

**Junior.**—More exercise in essay writing in the vernacular is needed. The questions on the noun and adjective were usually well done, but the answers on other portions of grammar were weak.

**Preliminary.**—The candidates attempted every portion of the paper, and, in each section of it, showed a satisfactory knowledge of the language at this stage.

### Latin.

**Senior.**—The translations of the passages from set books gave signs of careful preparation, and it was evident that the books had been read with intelligent interest and that more attention had been paid to unprepared translation. The questions on accidence and syntax were not well answered, and only a few of the candidates acquitted themselves creditably in composition.

**Junior.**—Vague paraphrase was often substituted for translation of passages from the prepared books. The compulsory unprepared translation was the weakest part of the examination.

**Preliminary.**—The papers showed some improvement, especially in the composition section.

**Lower Forms.**—The papers were very much above the average.

### Light and Heat.

**Senior.**—In most papers there was a fairly good account of the grease spot photometer, but very few seemed to know anything of the special theory pertaining to it. Neither Question 3 nor Question 5 brought any good answers. The construction for a refracted ray (Question 3) ought to be known, and Question 5 deals with a familiar instrument, in which students are usually interested. In Heat there was no correct answer to Question 7, and very few were able to state Charles's law. The method used for the determination of the latent heat of steam was described quite well in many papers, but the calculation was usually either omitted altogether or quite wrong. Very little was known about vapours, and the theory of the greenhouse (another everyday application of Physics) was almost unknown. The absence of convection currents is, of course, the chief fact to be mentioned.

**Junior.**—Most of the candidates knew what a pinhole camera was,

but very few had any idea of the principles involved. It is essential to show a pencil of rays which, starting from a single point on the object, just fills the pinhole and gives a tiny patch of light on the screen. Somewhat similar remarks apply to the question on the periscope; the diagrams intended to show the path of rays from the object to the eye were very poor. There were few attempts to answer the question on convex lenses, and, although some of these were very good, candidates were generally unable to advance any reasons for their statements. In the Heat section, almost every candidate who attempted Question 7 stated that mercury expands more than water (the conditions being the same in each case)—“hence its use in thermometers”! There were a number of good answers to Question 6 and Question 9, but Question 10 was often muddled, convection being confused with both of the other processes of heat transfer. It is desirable to explain that the layers (*not particles*) of fluid at the bottom of the containing vessel expand and rise through the colder and denser layers above, heating them by *conduction*.

### Magnetism and Electricity.

**Senior.**—Students at this stage should be able to make simple calculations, yet there was no correct answer to either of the numerical questions. Both Magnetism and Electrostatics were poor; for example, only one candidate knew even the qualitative meaning of permeability—usually it was confused with retentivity. Most of the candidates could describe an influence machine fairly well, but there was only one good answer to Question 4 in spite of its fundamental importance. The questions on current electricity brought better results, for, with the exception of Question 7, there were good answers to all, especially to the question on electromagnetic induction and to that on electroplating. The usual methods of increasing the sensitiveness of galvanometers (with a control magnet or an astatic needle) were not known.

**Junior.**—The answers were well distributed over all three branches of the subject, showing that the syllabus had been covered satisfactorily.

### Elementary Physics.

**Junior.**—It is doubtful if it is logical to use an opsiometer in the experimental proof referred to in Question 1; its use should be discouraged in favour of less artificial methods. Only a few really knew what is meant by the principle of the Lever (Question 2); most were content with a description of various levers. Very few knew the meaning of “equilibrium”; many discoursed instead on stability and instability. The latter part of Question 7 was beyond the great majority; the meaning of specific heat should be taught. The candidates, however, showed in general a knowledge of the subject of Physics which should give them an intelligent interest in things around them even though they do not proceed to higher stages. Their diagrams were good.

### Elementary Science.

**Preliminary.**—Teachers should emphasise the necessity of reasons being given; a categorical “Yes” or “No” is never enough. The word “properties” (Question 3) does not seem to be understood; most candidates who attempted this question gave instead the constituents of sugar (*e.g.*, *soot* and *water*!). Several mistook “volume” for “area” in answering Question 5. No candidate gave any reason for the area being half the altitude multiplied into the base.

### Chemistry.

**Senior.**—There were some very careless answers; for example, ammonia gas was described as collected over water, and in the preparation of crystallised sodium sulphate it was recommended that carbonate of soda be dissolved in concentrated sulphuric acid. The answers to the question involving a simple calculation were generally incorrect. The question on a metal was not well done. Many of the candidates had evidently never attempted to prepare either black oxide of copper or crystallised copper sulphate from copper. In many cases it was evident that the work in the laboratory had not kept pace with instruction in theory.

**Junior.**—The questions on the composition of water by weight, and on the hardness of water, were poorly answered. The action of heat on various substances does not appear to have been carefully studied, and the answer to the question on the effects produced by heating certain substances in the air was generally incomplete. The omission of essential practical details in describing methods of preparing substances was too common. This fault suggests that little attention has been paid to the practical lesson, or that interest in the laboratory work is lacking. In the practical examination, careful observations were made of the changes brought about by heat and reagents on the substances supplied for experiments, and most of the candidates correctly stated the nature of the substances.

### Botany.

The diagrams of the flower were bad, but in a few cases a sufficient attempt had been made to show that the candidates realised what was required. The diagrams must be *large*; the floral diagram must show the arrangements of the floral organs and the placentation; the vertical section must show the attachments of the parts to the thalamus. In some cases a really honest attempt to understand the subject had been made, but there was evidence of too great a tendency to treat Botany in this examination as a subject to which but little attention need be given. These remarks apply with equal force to senior and junior examinations. Candidates who wish to use the examination as a preliminary professional one must understand clearly that a good knowledge within the limits of the syllabus is expected.

### Drawing.

**Senior.**—Model Drawing: Perspective of parallel lines is still weak, and teachers may once more be reminded that in many cases defects in this respect would be readily perceived and corrected if candidates were trained to inspect their work at arm's length.

Memory Drawing was very fairly done on the whole, the weakest feature in many otherwise satisfactory drawings being the placing and drawing of the tumbler. There was often evidence that the subject had not been studied apart from Model Drawing.

**Junior.**—Model Drawing: The relative proportions of the objects composing the group were often much at fault in various ways, the commonest error being the suggestion of an absurdly large drawing board. Ellipses representing circles showed some improvement in treatment. The comment as to parallel straight lines in the report on the Senior Grade is equally applicable here.

Memory Drawing is not yet a favourite section, and, when chosen, the model-drawing aspect of it was, on the whole, better managed than the practical construction and purpose of the pincers, few of which could have been of any use to a carpenter. The observation of essentials is, of course, the most educationally valuable part of the subject, which is by no means merely a corollary of drawing from models.

Drawing from the Flat: There was a good deal of intelligent perception of the relations between the parts of the lamp, as well as realisation that the object was solid and circular. The chief hindrance to further improvement is the lack of real freehand power. Much of the line is scrappy and “stitchy,” and heavy “lining in” still sometimes destroys what life may have been in the first sketch. The chief need is to get the lines in their right places; but freedom of hand, which implies some freedom of arm, is of the greatest assistance in this very matter, and should be aimed at from the beginning.

**Preliminary.**—Model Drawing: If it is borne in mind that the examination in model drawing at this stage is limited to the representation of rectangular and circular surfaces in horizontal positions at varying levels, and that the problem is to make these surfaces *look flat*, it will be seen that their comparative foreshortening (especially such a fact as the increasing apparent roundness of circles as they are more removed from the eye level) should receive careful and continuous attention and study. In learning model drawing, as soon as some appreciation is gained of the phenomena of appearances a considerable advance is made at a bound. This is plainly shown in the papers presented at the examination: whilst the poor drawings are decidedly weak, the remainder are definitely of better quality, and include a fair proportion of very satisfactory essays. There are a few papers which give rise to a suspicion that resort has been had to ruling, although this practice has long been forbidden.

Freehand: The example set affords an opportunity of stating the right procedure in drawing. If the given leaf had to be carved in stone, it is obvious that the main external forms and the leading veins would be cut first, the serrations being made afterwards within those external shapes. This method is equally applicable to drawing. Thus: the large masses should first be drawn, with careful attention to proportion and form; the details should not be attempted until those masses are satisfactory.

**Lower Forms.**—While a very fair proportion of candidates drew the example well, a considerable number began to draw before they began to think. It should have been evident that the mass of the figure set at the examination closely followed the outline of a square. The square having been drawn, the way to a good result lay in carefully planning out the space which each of the large forms should occupy.

### Domestic Economy.

Some really intelligent answers were given to Question 1 on “Proteins” and No. 2 on “Pulses.” Answers requiring practical knowledge of house cleaning and laundry methods were mostly accurate. In dealing with emergencies:—(1) an escape of gas—the important step of turning off the gas at the meter was omitted in

several answers : also (2) in the case of an overflowing cistern, only a few mentioned turning off water at the main, or raising and tying up the ball cock of the cistern, and some omitted turning on all taps to relieve the overflow.

The Report of the Dean was adopted.

A hearty vote of thanks to the Chairman for presiding concluded the proceedings.

## THE COLLEGE OF PRECEPTORS.

### MEETINGS OF THE COUNCIL.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C.1, on the 29th of September.

Present : Prof. John Adams, Vice-President, in the chair ; Dr. Armitage-Smith, Mr. Bain, Mr. Barlet, Mr. Eagles, Mr. Gregory-Taylor, Mr. Hardie, Mr. Hawe, Mr. Hay, the Rev. R. Lee, Mr. Longsdon, Mr. Maxwell, Mr. Millar Inglis, Mr. Pendlebury, Miss Punnett, Mr. Roscoe, Mr. Rushbrooke, Mr. Starbuck, the Rev. Canon Swallow, Mr. Vincent, and Mr. Whitbread.

The Diploma of Associate was granted to Lionel Archie Davey, who had satisfied the prescribed conditions.

Prof. Adamson and Prof. Dixon were re-elected members of the Council, to fill the vacancies declared at the last meeting.

On the recommendation of the Finance Committee, a donation of £20 was made to the Secondary School Teachers' War Relief Fund, and a grant of £10 from the College Benevolent Fund was made to a life-member of the College.

The following persons were elected members of the College :—Mr. H. A. Grimshaw, B.A., B.Sc. Lond., L.C.P., 189B Lavender Hill, S.W.11 ; Miss E. B. Walker, A.C.P., 36 Wykehurst Road, Croydon ; Mr. R. O. Wilson, L.C.P., Royal School, Cavan, Ireland.

The following books had been presented to the College since the last meeting of the Council :—

By the HARVARD UNIVERSITY PRESS.—Brown's How the French Boy Learns to Write.

By HEFFER & SONS, LTD.—Appleton's Perse Latin Plays ; Palmer's First Course of English Phonetics and Colloquial English, Part I ; Palmer and Motte's Colloquial French, I.

By MACMILLAN & CO., LTD.—Brackenbury's Elementary French Exercises.

By METHURN & CO., LTD.—Griffiths's Housecraft Science.

By the OXFORD UNIVERSITY PRESS.—Ash's Colomb's La Fille de Cariles ; Collins's Stories in Verse ; Elford and Heaton's Cultivation of Allotments ; Matheson's Education To-day and To-morrow ; Mowat's Later Middle Ages ; Pushkin's Queen of Spades (Russian Plain Texts) ; War Speeches, 1914-1917.

By ROUTLEDGE & SONS, LTD.—Word-Book of the English Tongue.

By the UNIVERSITY TUTORIAL PRESS, LTD.—Weekes's Lamb's Tales from Shakespeare ; Wyatt and Low's Intermediate Textbook of English Literature, Part I.

By EFFINGHAM WILSON.—Osborne's Commercial Calculations, Part I.

Calendar of the Birkbeck College.

Calendar of the University of Cape of Good Hope.

Calendar of the University of Edinburgh.

Calendar of the University of Glasgow.

Calendar of the University of St. Andrews.

Calendar of the National University of Ireland.

Calendar of University College, London.

N.U.T. Report, 1917.

A Meeting of the Council was held at the College, Bloomsbury Square, W.C.1, on the 27th of October.

Present : Prof. John Adams, Vice-President, in the Chair ; Dr. Armitage-Smith, the Rev. F. W. Aveling, Mr. Bain, Mr. Barlet, the Rev. J. O. Bevan, Mr. Brown, Mr. F. Charles, Mr. Cholmeley, Mr. Eagles, Mr. Gregory-Taylor, Mr. Hawe, Mr. Maxwell, Mr. Pendlebury, Miss Punnett, Mr. Roscoe, Mr. Rushbrooke, Mr. Somerville, Mr. Starbuck, and Mr. Whitbread.

The Diploma of Licentiate was granted to Frederick George Swan Ward, who had satisfied the prescribed conditions.

On the recommendation of the Evening Training Department Committee and the Finance Committee, it was resolved that arrangements be made for a Course of Training devised in the first instance for Teachers of Commercial Subjects, and that the existing Courses of Lectures be made the nucleus of the Course of Training.

A grant of £10 from the College Benevolent Fund was made to a life-member of the College.

The following books had been presented to the College since the last Meeting of the Council :—

By the CAMBRIDGE UNIVERSITY PRESS.—Cambridge Travel Books (Discovery of America, and Earliest Voyages round the World).

By JOHN MURRAY.—Walters and Conway's Ad Limen.

By the OXFORD UNIVERSITY PRESS.—Forbes's Browning Anthology ; Hassall's Bolingbroke on Patriotism ; Jarvis's Teaching of History ; Underwood and Forbes's Tolstoy's Prisoner of the Caucasus ; Upcott's Cicero's Catilinarian Orations.

By the UNIVERSITY TUTORIAL PRESS.—Wyatt and Low's Intermediate Textbook of English Literature, Part II.

## ART TEACHERS' GUILD.

### RECOMMENDATIONS TO THE RECONSTRUCTION COMMITTEE ON THE SUBJECT OF ART EDUCATION.

In dealing with the problem of art education it is essential that a very definite distinction be made between professional art education (the training for actual art production ; the work of the art school) and art-work as a factor in general education (the work of the ordinary school, whether primary or secondary).

The purposes and methods of these two branches of art education are necessarily different, inasmuch as the art school deals with adults voluntarily devoting their whole time, or a large part of it, to the study of art as a profession ; whereas the ordinary school deals with the immature child, as one of a school class or form, and the art-work is only one of the factors employed for his complete education, the time devoted to it being but a small fraction of the whole.

It is with this latter branch of art education that the Art Teachers' Guild is chiefly concerned, and desires to make the following recommendations to the Reconstruction Committee when dealing with educational reform :—

The highest aim of education being the formation of character, great importance must be attached to those studies which foster the finer feelings and lead to the appreciation of what is fitting and worthy in life. Of these, art, in all its many and varied aspects, exerts an influence from the earliest years, whether as a source of æsthetic pleasure or as a means of recording impressions, and, if general education seeks to secure the all-round, balanced development of a child's nature, the cultivation of the æsthetic faculty cannot be neglected. Art-work, therefore, should be included in the curriculum of every school.

To provide opportunities for the exercise of the æsthetic faculty should be the aim of all art-work employed as a factor in general education, whether in primary or secondary schools. The acquirement of technical skill should be the outcome of a desire on the part of the child for a fuller power of expression, whether of observed facts or of ideas, and not be an object in itself. To cultivate appreciation, both of art and Nature, rather than actual power to produce, should be the chief concern of those responsible for the teaching.

To accomplish this aim the work should include colour, modelling, imaginative drawing, design and craft work, drawing from Nature, and other objects, both directly and from memory.

Imaginative drawing and illustration should form a large part of the work of the youngest classes, and should be carried on as long as it shows spontaneity and originality.

Colour should undoubtedly enter into the work from beginning to end. It is, perhaps, the best means of all for developing the æsthetic faculty, and affords constant opportunities for exercising the power of selection.

Modelling in clay or plasticine is valuable in that it develops both appreciation of form and the sense of touch, and appeals to the constructive impulse.

Design should be commenced at an early stage and continued throughout the course, always in conjunction with some form of craft. Drawing and colour are thus united with measurement and construction, and scope afforded for the creative powers. Further, the principles which underlie all artistic work are thereby demonstrated, and the pupils enabled to form standards, by which they may afterwards judge architecture, domestic decoration, dress, furniture, utensils, posters, printing, &c., whether as producers or consumers.

The representation of form will enter into any scheme, but the subjects chosen should appeal to the child sufficiently to

secure his interest and ensure the utmost degree of accuracy of which it is capable; therefore subjects should be taken from Nature as often as possible.

The power of visualizing is of great value, and may be cultivated by regular practice in drawing from memory and imagination.

Every opportunity should be taken to correlate the art-work with other subjects in the curriculum. Science, geography, history, as well as manual work, such as woodwork and needlework, benefit both directly and indirectly from the art-work, but as a means of developing the æsthetic faculty it may be associated with literature, music, dancing, and acting.

The varieties of art-work in schools are numerous, and qualified teachers should be allowed considerable freedom in the choice of the means they employ. The teaching, however, should always be either in the hands of a properly qualified person or under his or her immediate direction. (This is not the case at present in the majority of primary schools.)

At present, conditions of accommodation, available time, size of classes, equipment, too often hinder the effectiveness of the work. In every school a special room should be provided and equipped for the art-work, even though some classes had still to be taken for certain kinds of work in ordinary classrooms. Each pupil should have at least one hour and a half a week of art-work. The number of lessons given by any teacher should not amount to more than twenty-five hours a week.

Considerations of space and preliminary preparation necessitate that classes for art-work, as for practical work of all kinds, should be smaller than for lessons such as arithmetic or languages. Twenty-five is generally found to be the largest number that one teacher can adequately deal with. Assistance should be provided where this number is exceeded.

The material and means supplied for the art-work must be of such a quality as to give satisfactory results.

The collection of pictures and objects of art interest should be of as much importance as a school library or museum. Where accessible, museums, galleries, and private collections, as well as architectural features of the neighbourhood, should be made full use of in connexion with the art-teaching. The system of loans to art schools by museum authorities might well be extended to ordinary schools prepared to make proper provision for their care.

The inclusion of art-work in the school curriculum, and its continuance to the end of the school course, should not be dependent on the requirements of outside examinations, as is too often the case at present, but should be determined purely on the grounds of its educational value, and made obligatory in all State-aided and State-inspected schools. Its inspection should be entrusted only to those conversant with the educational bearing of the subject, and not merely with its technical qualities.

Specialization is, or should be, outside the scope of general education, but, in a secondary school, any pupil possessing sufficient artistic skill should have the opportunity to include art-work among the subjects taken for a general examination at the end of his or her school career.

Scholarships for the study of art should be provided equal in value to, and offering the same facilities as, those awarded for college and University training.

In primary schools boys and girls showing special talent should be allowed, as at present, to attend special schools, where better opportunities can be provided to develop these abilities with a view to their future application to some special craft, but this should never be permitted at any sacrifice of their general education.

There is one region where the interests of professional art-training and the art-work of schools overlap, and that is the training of teachers for the latter. Inasmuch as teaching ability is as important as artistic ability, their training should either be the work of the training college, adequately equipped, or else the joint work of the training college and the school of art, both incorporated in a University scheme. At present the Board of Education offer no suitable certificate for art teachers in secondary schools, a defect requiring immediate remedy.

Reciprocal advantages would be derived were arrangements made for such teachers in training to assist with the art-work of approved primary and secondary schools under the direction

of the regular art teachers, such practice work to be recorded and counted as part of their training.

Another aspect of art education is the cultivation and fostering of public taste in art matters. Local Education Authorities, in co-operation with qualified individuals and organizations, should promote exhibitions not merely of pictures but of crafts, industrial design, architecture, and so on, and arrange for courses of lectures in connexion with these.

We would specially urge upon the attention of the Reconstruction Committee the need for controlling public advertisements, both as regards their form and content, as well as their display. In these lie very great possibilities for raising and lowering the standards of public taste. Powers might well be granted to Local Authorities to form Committees of Public Taste, which, if they could not arbitrarily restrict the liberty of the individual, might at least establish "Model Hoardings," and offer advantageous terms to those prepared to submit their posters to appointed judges.

## ADVANCED COURSES.

ON the subject of "Advanced Courses" in secondary schools, Mr. Fisher writes to Mr. Wynne-Edwards as follows:—

I was very glad of the opportunity of hearing the views upon our new Regulations for Advanced Courses in Secondary Schools, put forward by the deputation from the Incorporated Association of Head Masters, which I received on July 12. I hope I am not mistaken in the belief that I was able on that occasion to remove certain misapprehensions on the subject, and to allay in some degree the anxiety that was evidently felt by some members of the deputation about the effects of our proposals. I think, however, that it may be useful that I should, at the risk of repetition, make a few more observations on the points raised by the deputation.

The deputation appeared to me to be concerned in the main about two points in the scheme: (a) The position of schools which may fail at the outset to obtain recognition for any advanced course, and the serious danger that the process of organization involved in the scheme would make it even more difficult for them to make good a claim to recognition hereafter than it would be in the first instance; and (b) the difficulty of working a general system of transfer of pupils in view of the history and traditions of our secondary schools, and the importance so justly attached to their corporate life and the training of character.

I wish, in the first place, to ask you and your colleagues to believe that the Board of Education (and the officials responsible for the administration of the regulations as much as myself) are, and have been, fully conscious of the difficulties to which you refer, and are impressed with the need for an experimental treatment of the subject. We are, however, convinced that in its broad features our plan is the best available for dealing promptly with the very inadequate provision now existing for advanced work in secondary schools, and that, broadly speaking, concentration of this provision in selected schools is called for especially by the inadequacy of the supply of teachers with high qualifications—an inadequacy which it must take some time to remove.

On the other hand, the Board, while believing some degree of concentration and selection to be essential, will be grievously disappointed if the result of the new regulations is not to produce a large and rapid increase in the number of schools providing advanced courses, and especially in the number of the new municipal schools developing in this direction. They recognize that the deputation put its finger on a real and serious problem in drawing attention to the difficulty a school might have in future in working its way to recognition as a school for advanced work; but the problem does not seem to me to be at all an insoluble one. It undoubtedly will call for great watchfulness on the part of the school authorities, and of the Board's Inspectors; and, above all, it will depend upon an active and cordial co-operation between the Board and Local Authorities, and a real desire to look out for and encourage local demands and aspirations for improved opportunities.

Your Association, and others who have already warned us of the danger to be anticipated, will also help by exercising a similar watchfulness in the future. Meanwhile, it is important that the probable effects of the regulations should not be miscalculated or exaggerated. Our recognition of advanced courses will be confined to cases in which continuous and organized provision can be made for them, but it is no part of our plan that schools which cannot provide such courses should abandon all advanced work for individual pupils. Still less that they should cease to make provision for pupils who, though remaining at school well beyond the normal age for entering an advanced course, are for various reasons not fitted to profit by admission to such courses. Our plan for advanced courses has an obvious connexion with our plan for the better ordering of secondary-school examinations. Approved advanced courses will, very properly, lead up to the second examination under that plan; but it is certainly not our view that pupils who are at any schools, especially schools in rural areas which cannot maintain an advanced course, should be restrained from entering for the second examination.

On the subject of transfer of pupils I hope I made it clear to the deputation that the Board, while maintaining that some system of transfers is ultimately involved in a scheme of secondary studies based on the principle that it is impossible to expect every school to provide all the advanced courses for which some provision should be made, are, at the same time, convinced that the principle of transfer can only be applied very gradually and tentatively. They recognize that it is impossible to lay down arbitrary rules about the age of transfer, which may reasonably differ in different courses of study. At starting, and for some time after, in many areas the system can only be worked on a very small scale. In large towns, where there is a fair choice of schools accessible to day pupils, and in which an economical distribution of advanced courses ought to be attainable with comparative ease, the difficulties of transfer ought not to be very serious, and it ought to be possible for schools in such areas to learn to look upon themselves as members of one family. At the other end of the scale, it appears to me that, in areas with small populations and small schools, there must continue to be a deplorable waste of ability and talent unless means of transferring pupils to schools in which they will get the best chance of development can be provided. I see no reason why a system of transfer should not come to be worked in such a way as to be a source of interest and pride not only on the part of the school to which a boy or girl of marked ability is transferred, but also on the part of the school from which the transfer takes place. I need not add that it is no part of the intention of the Board to press the transfer of individual pupils from school to school against the advice of their head teachers or the wishes of their parents. The Board will mainly be concerned to satisfy themselves that facilities for transfer are provided, and that reasonable arrangements are made for co-operation between schools in this respect, and must leave it to the judgment of those more closely concerned to determine how far the interests of a particular pupil would be served by transfer to another school.

In connexion with both of the points on which I have offered these observations, I assure you I am sensible of the great value attaching to the vigorous corporate life of the individual school, and of the importance of treating it as a living organism; but I also hold strongly the opinion that this view is not incompatible with the view that the individual school has also its function as part of a larger organization, and that all of us who are working in the field of education are bound to face the problem of reconciling the two. We cannot, either administratively or financially, improve our schools without a careful consideration of the needs of particular areas as a whole, and without full co-operation with those whose special duty it is to have regard to them. Too little organization is as inimical to progress as too much, and organization of any kind must involve, in some degree, differentiation of function. I am confident that, if we face this problem in the right spirit, we have a far better chance of doing the best for pupils and teachers on the lines we have suggested than by a wider diffusion of our limited resources in the attempt to secure to every school an equal chance of doing every kind of work.

## THE REVISION OF SPELLING.

By ALFRED P. GRAVES, M.A.

(Late H.M. Inspector of Schools.)

ENGLISH spelling is perhaps the greatest difficulty in our early education, owing to its extremely anomalous character. This apparent lawlessness, by which the spoken does not follow the written sound, is of course due to the retention upon the printed page of letters and collections of letters now either dropped in our speech or pronounced differently from what they were. The retention of misleading letters is to some extent valuable on historical grounds, but makes it most difficult to teach children or foreigners how to learn to read English; and, it may be added, it is doubly difficult for foreigners. It may be asserted that a child of average ability will take four times as long to learn English, as at present spelt, as it would take him to learn it as spelt on the plan proposed by the Simplified Spelling Society. German children learn to read their phonetic language in about a year, and, once they have mastered it, it is theirs for ever. Mr. Robert Lowe, when he was Minister of Education, said he never could get a sixth standard boy to read decently to him, and in my thirty-five years' experience as a Government Inspector of Schools I can say that, although I found scholars who had been obliged to spend from six to seven hours a week in learning to read English in the lower classes of our elementary schools, I have rarely been completely satisfied by the performances of even seventh standard scholars. No doubt their unsatisfactory results are in part due to the overcrowding of the curriculum with other subjects in the upper classes, and the necessary limitation of the time for residing there. But the fact remains that, in order to acquire reading of the right kind, an undue proportion of the time, already short enough, allotted for elementary education must be taken up in order to teach a child to read and, let me add, spell satisfactorily. And here let me say that spelling has been allowed to go by the board to a large extent, it having been felt that more time had been given to it than could be reasonably spared from other more important subjects.

Indeed, the difficulty in teaching reading and spelling has been made manifest by the manifold methods employed in dealing with them. Thus we have the old-fashioned alphabetical method, by which the names of letters are used in spelling in an absurdly illogical way; thus, *p, i, g*, which should spell "peige," spells "pig," and *c, a, t* should spell "sate." This irrational method, under which most of us have suffered, is giving way to phonic methods, by which whatever phonetic basis there is to the language is first drawn upon, irregular words being afterwards gradually introduced. Perhaps the best form of phonic teaching is that inaugurated by Miss Nellie Dale; but she does not profess to teach reading rapidly, and therefore much time is still lost under it. Then there is the "look and say" method, which teaches reading through the eye, not the ear; and the eclectic method, advocated by Prof. Meiklejohn, a combination of the "look and say" and phonic methods. None of these, however—not even Prof. Sonnenschein's ingenious, but unnatural, system—has triumphed over the obstacles created by our difficult system of spelling. Here it may be stated that German, though already a practically phonic language, has recently had its spelling further simplified, shedding all redundant letters in order to make the teaching of reading and writing as simple as possible. Is not this a good example for us, provided by the people who are our most formidable rivals intellectually, commercially, and navally?

But how are we to effect this change, and what line is it to take? Prof. Ripman has explained that the scheme of the Simplified Spelling Society is a reasonable compromise between a purely phonetic system of spelling and our present system, or want of system. I have given this plan my careful personal consideration and must confess myself an adherent to its general principles, with, perhaps, slight modifications into which I cannot now go. Its advantages are that it will not only enable children to learn to read and

spell much more rapidly, and pronounce more correctly, but that it will help in the teaching of shorthand; not render it necessary to throw over our existing founts of type; make it easier, through phonic teaching, for children to acquire continental languages; and, above all, by making the English language a phonic one for foreigners, give it the opportunity of becoming more and more a world language. But how is this great reform to be introduced? Obviously, by the Board of Education, and not necessarily in the first instance by compulsion. Let its effects be tested against the present system by capable teachers in different parts of the United Kingdom. When these are proved superior to those of former systems, let it be taken up generally in the infant schools and carried right through the school course.

If it is objected that you will have two systems of spelling in vogue—our present system and a new system coming up to take its place—the natural reply is that those who have learnt on the old system will continue to read books printed by its principles, and that these therefore will be very gradually ousted from the book market, and will always remain in libraries for consultation by those interested in earlier spelling on historical and etymological grounds. But here let it be said that the simplified spelling will reveal as well as obscure the derivation of words, more especially their Teutonic origin, as shown for example by the word “mother,” which will come to be “muther,” more closely connecting it with the German *Mutter* than the present “mother.” The only formidable difficulty in the way of this reform will be the obtaining of a consensus of opinion upon the correct pronunciation of English by the English-speaking peoples, for we must join hands with the United States in this matter as that country is, I believe, prepared to do. The easiest way out of the difficulty is to realize that for the present a variety of pronunciations of the same word may, for the time, be accepted. The pronunciations of the North and South of England will have to be reconciled, or, in some instances, tolerated together.

Certain letters which, according to Horne Tooke, are apt, like soldiers, to drop off in a long march, will have to be saved as they are saved in Scotland, Ireland, and the U.S.A.—i.e., the letter *h* after *w*, the final *g*, and the final *r*; and, generally, an arrest must be made of the absence of tone in the pronunciation of our vowel sounds, which is depriving our language more and more of its vocal beauty.

## OVERSEAS.

TWELVE and a-half million dollars have been set aside by the municipality of New York to extend the Gary Plan in the city, half of this sum to be expended on new buildings. It will be remembered that the Gary Plan consists in an arrangement by which the school buildings are in use all the time, morning, noon, and night, the school work being organized in such a way that schools can accommodate twice the number of pupils possible under the ordinary scheme, which demands “a seat and a desk” to be always at the disposal of each pupil. Teachers at first fought shy of the Gary Plan, because it appeared to be founded mainly for the purpose of lessening the cost of education. But it won its way, and everything seemed to be progressing well. Suddenly the Plan was attacked by that sinister organization known as “Tammany.” To be sure, there is something comic in Tammany taking an interest in education. But any stick will do to hit an enemy with, so, for want of a better issue, the school situation has become the centre of the cyclone of the mayoralty campaign. In England we sympathize with whoever happens to be the Minister of Education because he is so hampered in his work by political considerations. But, after all, what we suffer from here is a trifle compared with what is now happening in New York. We congratulate Mr. Fisher that he is opposed by merely stupid and selfish and unimaginative men, who fight fairly and are honest according to their lights. A Judge Hylan is fortunately an impossibility in our educational politics.

It is interesting to find in the *Milwaukee Journal* an indictment of the German system of education. Not only is Milwaukee practically a German city, but the author of the article, Prof. Paul Hanus of Harvard University, was himself born in Prussia. No one appreciates so clearly the evils of the Prussian system as those who know it well without having been ruined by it. Prof. Hanus's charge is that the system has the deliberate aim of stifling self-reliance. “The effect of the educational system in Germany is to train the masses to be docile subordinates, and intellectually to train them only to the point where they recognize their dependence on the classes. Their condition is not unlike that of the slaves in slavery times in the United States, with the exception that, while the slaves had no adequate conception of their dependence on their masters, the German masses are trained to a full understanding of their dependence on the classes.” The elementary schools are deliberately used to produce a limited outlook and a dependent attitude. To one who has had merely an elementary education there is no career open. He must always be content with a wage-earning occupation, and his wages are small. The course is further arranged so that it is practically impossible for a child who has begun on the elementary course to pass over into the secondary. Such a transfer is not unknown, but for all practical purposes the secondary and elementary sides are separated like watertight compartments. The success of the Germans in realizing their scheme of subordination by education is proved by the state of public opinion in the Fatherland, compared with what is found in Milwaukee where the stock is the same, but differs in having had a democratic education. Prof. Hanus concludes by maintaining that German education is antagonistic to democratic ideals, and should get no encouragement in the United States.

In England we think we do very well when we have a Conference on Educational Ideals which gives a whole set of meetings to the consideration of educational experiments. But in New York City they have a permanent Bureau of Educational Experiments, at 70 Fifth Avenue. One of its latest activities will interest Miss Margaret Macmillan, for it consists in the establishment of boys' camps in connexion with farm work. The problem of the street corner boy during the long summer days of the vacation is a serious one for the city authorities, and the need for labour is getting to be an equally serious one for the farmers in these war times. So the Experimental Bureau cancels out the two needs by providing camps at suitable centres where the boys can live the half romantic camp-life they love, while spending the major part of the day in the useful routine of a farm. The farmers get their work done at a moderate cost, the boys have a good time and get a valuable training, the country gets an increased food supply. This looks like one of the successes of the Bureau.

In view of the proposed continuation schools in England during working hours, some interest should be aroused in a scheme for part-time education now developed at Akron. Two Tyre and Rubber Companies have established thirty scholarships at the Municipal University, which will cover all tuition, incidental and laboratory fees. The scholars are assigned to a course upon the co-operative basis, working alternate two-week periods in factory and college. Each student receives from the factory employing him the sum of 37½ dollars for each two-week period during which he is employed, and at the end of the four-year course the graduate will have the opportunity of a permanent position in the organization in which he has been trained. There does not appear to be any condition that candidates *must* enter the service of the firms with whom they have learnt their business. The Tyre and Rubber Companies rely upon the attractions of their service, and upon the fact that special preparation will give a strong bias towards their line of work. American educators approve of the scheme, inasmuch as it offers the opportunity for a high-school graduate to procure an education practically without expense to himself, and they point with approval to the example of the government institutions at West Point and Annapolis. Can we point with the same satisfaction to Sandhurst and Dartmouth? There are great possibilities latent in Mr. Fisher's modest beginning of eight hours a week.

**SCHEMES OR SOULS?**

At the present time, more perhaps than ever before, it is possible to arouse public interest in education. But this interest is directed in the main to two aspects. In the first place, and most conspicuously, loom the administrative questions concerned with the provision of educational opportunity, the supply of teachers, grants of public money, and the relation of local bodies to the central office. The second aspect that draws public attention is concerned with the curriculum: numerous resolutions are passed and numerous letters are written to the newspapers on such subjects as the teaching of science and classics, and the inclusion of manual work in the time-tables of elementary schools. Less frequently do we hear in newspapers of the study of the child who is to be operated upon. A memorandum recently issued by the Child Study Association comes as a useful corrective. It is quite true, as Prof. John Adams who writes a preface to the memorandum points out, that "our people take a very practical, not to say utilitarian, view of the matter, and care more for results than for processes." But teachers are bound to observe processes, and the more far-sighted members of education committees want to know what educational science has to say on the subject.

The second section of the Memorandum deals with Child Study and Experimental Psychology and their Influence upon Education. Of this part Prof. Adams says: "This section should appeal strongly to the professional teacher, and, be it whispered, professional teachers are not always, in these matters, greatly in advance of the plain man. Among them in the past there has been a regrettable lack of interest in just such things as are here treated. Teachers who, in reading this section, find themselves quite at sea, must take thought and mend their ways of regarding their professional responsibilities. But those who, while following the general drift, come across things they did not know before, and do not now completely understand, may take heart of grace. For the treatment here is technical; the subject-matter is brought up to date, and represents the present state of knowledge on the subject. Not every teacher can keep quite abreast of all the scientific developments of his profession; but all teachers should be anxious to profit by such a clear and accurate statement as is here presented."

The section to which reference is made is too long to quote in its entirety, but a few extracts may be helpfully given.

"The influence of child study and experimental psychology," says the memorandum, "upon the work of the school has been positive and definite, although indirect rather than direct. Their effect has been to foster and encourage fruitful experiments in educational reform by supplying them with scientific justifications. Above all, they have demonstrated that only upon a careful and scientific study of child nature can a sound and successful method of education be built." The personality of the child receives greater respect now than in previous times. We are endeavouring to give the individual teaching and treatment necessary in each case. But, before teaching can be adapted to the individual, the individual's needs and capacities must first be diagnosed. There are two ways in which this diagnosis can be carried out: first, by observation, and, secondly, by experimental tests. Scientific tests of intelligence have been devised by Binet, Spearman, Burt, and others, and are now used by many teachers to enable them to gauge their pupils' powers. The result of these scientific studies is that "the subjects taught and the methods of teaching have considerably changed during recent years. In the more progressive types of schools several broad tendencies may be observed. All owe their acceptance in part to the results of child-study in the broader sense."

This section of the Memorandum then proceeds to point out the general direction of the changes: "Far less emphasis is now laid upon the disciplinary value of subjects, and upon subjects whose value is almost wholly disciplinary. Following in the steps of a series of American investigators, Winch and Sleight in this country have shown very clearly that practice in one kind of activity produces improvements in other kinds of activities only under very limited and special conditions. The whole conception of transfer of training is thus changed, or (as some maintain) destroyed, and the earlier notion of education as the strengthening, through exercise, of certain general faculties has consequently been revolutionized." On this point the Memorandum is very emphatic and usefully so. Much effort is needed to overtake and wipe out the results of an erroneous mode of thought. The earlier view—that the mind was divided into so many faculties, and that when each faculty had been trained by the study of the appropriate subject the child was educated—is now seen to be incomplete.

The Memorandum continues: "There is a tendency to select subjects and methods of teaching rather for their material than for their general value. Education is directed not so much towards the general training of abstract faculties—observation, memory, reasoning, and the like—through academic exercises, but rather towards the acquisition of specific mental habits and attitudes useful in dealing with specific types of subject-matter; and the acquisition of these habits and attitudes is induced by exercise upon subject-matter as nearly as possible the same as that with which the habits and attitudes will have to deal in later life."

It is, perhaps, fair to say that nineteenth-century education was mainly concerned with the intellect. So far as school life was concerned, the emotions were repressed, and knowledge was set above will-power. "Recent child study, however, has emphasized the importance of the motor and of the emotional aspects of the child's mental life—in a word, *i.e.* conation, as distinguished from cognition. As a consequence, the theory and practice of education have assumed more of the pragmatic character which has characterized contemporary philosophy. . . . Upon these grounds, handicraft should now find a place in every school curriculum. It will be inserted both for its own sake and for the sake of its connexion with other subjects, whether they be subjects of school life, of after life, or of human life generally. As a result of child study, more attention is now being paid to the emotional, moral, and æsthetic activities."

The Memorandum tells us that certain forms of mental inefficiency in later life, such as hysteria, lapses of memory, and shell-shock, may be traced to the repression of emotions in early life. This enforces the claim for greater freedom for individual effort and initiative. Internal discipline is substituted for external, and "the predetermined routine demanded of entire classes is giving way to the growing recognition of the educational value of spontaneous efforts initiated by the individual, alone or in social co-operation with his fel-

lows. In appealing for greater freedom still, the new psychology is in line with the more advanced educational experiments, such as the work done by Mme Montessori and the founders of the Little Commonwealth." "The ideal curriculum would consist largely of life-sustaining occupations, with more and more intellectual studies grouped round them. Children should go to school to do necessary (and therefore to them interesting) work, as well as to satisfy intellectual curiosity. Such pursuits also supply moral and spiritual training."

The section of the Memorandum from which the passages quoted above are taken ends with this summary of the value of the work done by investigators into child psychology: "But of all the results of child study perhaps the most valuable is the slow, but progressive, inculcation of the whole teaching profession with a scientific spirit in their work, and a scientific attitude towards their pupils and their problems. Matter taught and teaching methods are no longer exclusively determined by mere tradition or mere opinion. They are being based more and more upon impartial observation, careful records, and statistical analysis—often assisted by laboratory technique—of the actual behaviour of individual children."

### MR. FISHER'S DEBUT.\*

Mr. Fisher's first speech in the House of Commons was a great parliamentary success. He made it on introducing the Education Estimates for the year. He struck a note which appealed to public sympathy. "One might have imagined," he said, "that the war would have so occupied and exhausted the mind of the country as to leave room for no other thought. But this has not been the case. The war has had the very opposite effect. This great calamity has directed attention to every circumstance which may bear upon national strength and national welfare. It has exhibited the full range of our deficiencies and it has prompted us to take stock of all the available agencies for their improvement." He noted also that the Trade Unions are demanding educational reform and that many of the most enlightened employers and manufacturers are actively promoting it. It is new in the experience of this country to find so large a consensus of opinion in favour of the view that a widened and deepened general education, open to all classes of the community, is needed in the interests of our common citizenship, apart altogether from its bearing on industrial and commercial enterprise. He made a rough estimate of the total expenditure of England and Wales upon all forms of school and college education. Adding the sum of fees, voluntary gifts and endowments to what is contributed out of local rates and Government taxes, he arrived at a total of about forty millions a year.

In a passage which has been much quoted, he pointed out that this large sum of money is less than twice the value of our annual national expenditure on tobacco, and only about one-quarter of the value of our annual expenditure on alcohol; that it is only eight times as much as we spend on oranges and bananas, and four times the value of the estimated saving which the country has been able to effect through the partial substitution of margarine for butter. He boldly and rightly claimed that education was a form of productive expenditure. "The question is not so much whether we can afford to spend the money as whether we can afford not to spend it." As, therefore, he was about to ask the House of Commons to pledge itself to a large additional expenditure on public education, he admitted the fairness of the question whether the country was getting at present full value for its present expenditure. No one, he said, could pretend to doubt, after a comprehensive view of the subject, the very real effect which our system of popular education has had in the improvement of morals, in the refinement of taste, and in the development of the skill, knowledge, and intelligence of our working population. "The period since 1870 has been accompanied by a marked decrease in crime. Illiteracy has been reduced to the point of insignificance. The habit of reading good books has been widely extended, and during the past decade there has been a very substantial measure of educational progress."

\* From *Indian Education*.

Whatever test you take, he said, there has been a very marked and clear advance. Some will say, perhaps, that this is an advocate's statement, all the more persuasive because not over-emphasized. There has certainly been in the last fifty years an extraordinary change in the outlook of the British people. There has been what one might call a deliquescence of certain fixed ideas, whether of principle or of prejudice. Economic conditions have undergone so great a change that society has been adjusting itself to new requirements. Some virtues which were of pre-eminent importance have lost a little of their old prestige. New excellences have become very prominent. New defects are displayed. It is very difficult to say what is the net result after striking a balance of these immense changes. Still more difficult is it to assign to education—at least, to that part of education which is given in schools and colleges—an exact share of the credit for what has improved, or of the blame for what has become impaired. But it is satisfactory that the President of the Board of Education feels justified in declaring that there has been a marked and clear advance.

The experience of the war was adduced by Mr. Fisher as confirming this judgment, especially with regard to the value of the work of the elementary schools. "An immense army has been suddenly formed out of volunteers and has proved itself, in a very short space of time, the match at every point for the forces of the first military nation in Europe. It is an army mostly recruited from the elementary schools. This sudden and brilliant military improvisation could never have been achieved if we had been working upon the basis of a population entirely uneducated. This wonderful achievement implies trained powers of assimilation, the instructed conscience, the well directed will, and an instinct for good conduct. And when we consider that the enemy is divided from us by the obstacle of the sea and that we have had every reasonable security for hearth and home, the great English Crusade is found to imply qualities of imagination and ethical feeling as well." He quoted from a letter written by an officer in a Lancashire regiment in the year 1915-16:

The second- and third-line troops could never have been raised and trained in the time they were but for the public elementary schools. In many cases the first two lines absorbed all the trained material there was, and the commanding officers of the third line had actually to "make" officers, non-commissioned officers, and men, the last two almost wholly from the products of the public elementary schools. The instruction of the men was greatly helped by their intelligence. Scouting, outpost work, bombing, trench raiding, &c., required not only native intelligence, but also the ability to write in plain, unmistakable English a short message, on which much may depend. We had no Army schools for our men, nor any time to spare for instruction even if we had. Consequently we were wholly dependent on what the public elementary schools sent us.

He quoted also from an officer in the Navy, the commander of a light cruiser flotilla, manned almost entirely by hastily levied hands from the merchant service or from ordinary civil employ. This letter said:

The way these fellows picked up the job seemed to me perfectly marvellous. There is something in your Board-school education after all.

But Mr. Fisher continued: "In education almost everything depends upon the personal element. If the teacher is good, if he is thorough in his work, fond of children, alert, understanding, sympathetic, firm, and yet good humoured, success is secured. If the teacher is bad, the most costly buildings and equipment will not redeem your educational system from failure." He said that, on the whole, we had been remarkably successful in the teachers obtained for our State-aided and State-provided schools, having regard to the slender remuneration which has been offered to them. There were, of course, varieties of quality. "Every teacher is not a paragon. Some have no gift, others little industry, and, like every long-service profession, the teaching profession shelters men who have outlived their zest and appetite for work."

But how vivid and encouraging is the contrast between the average teacher of to-day and the men described by Macaulay in the House of Commons in 1847:

The refuse of all other callings, discarded footmen, ruined pedlars, men who cannot work a sum in the rule of three, men who cannot write a common letter without flaws, men who do not know whether

the earth is a sphere or a cube, men who do not know whether Jerusalem is in Asia or America.

Macaulay exaggerated. There were in his time noble-minded and experienced teachers. His description of the educational service of the country was grotesquely unfair. Nevertheless, during the last seventy years, there has been an extraordinary improvement. The work of the schools has been more standardized, the profession has found itself. And then Mr. Fisher turned to the need for great and immediate improvement in the financial position and prospects of the teaching profession. "The first condition of educational advance is that we should learn to pay our teachers better. If we do not take this step, we shall not be able to keep the profession at its present level in numbers and quality. Still less shall we be able to extend its sphere or to deepen its influence. And steps should be taken now if the fruit of the investment is to be reaped after the War. A teacher cannot be educated and trained in the twinkling of an eye, and we must make the profession more attractive now, in order that young people may be tempted to enter forthwith on the comparatively long course of education and training which is the necessary preliminary for work in our State-aided and State-provided schools." He said that he had heard the remark that teaching is a vocation and that the money wage does not matter. He admitted that a very large number of men and a still larger number of women do enter the teaching profession actuated by something akin to the missionary spirit. But the annual supply of recruits needed by the teaching profession is nine thousand. "We cannot depend upon an annual supply of nine thousand missionaries, content to endure a hard, narrow, and stunted existence for the sheer love of teaching. In every large profession you must rely on economic motives to some extent for your recruits, in the teaching profession less than elsewhere perhaps; but even teachers are human. It is essential to a good scheme of education that teachers should be relieved from perpetual financial anxieties and that those teachers who marry should be able to look forward to rearing a family in respectable conditions. An anxious and depressed teacher is a bad teacher; an embittered teacher is a social danger."

Would it be best, then, Mr. Fisher asked, that the State should pay the teachers direct? He said that he had considered carefully this solution of the problem. He found it to possess many clear recommendations. If the State were to salary the teachers, the inequalities which at present exist between the salary scales in different areas would disappear. There would be a general scheme of increments and of promotion throughout the country. Rural schools would be better served. Available teaching ability would be distributed by the State in such a way as to secure a degree of equality of opportunity as between urban and rural districts which, under the present system of decentralization, it was very difficult to secure. He did not "fear the enslavement of the public intellect through a corps of State teachers, because, do what we will, we can never make a German out of an Englishman, let alone out of a Welshman." But he held that the establishment of the teaching profession as a branch of the Civil Service would cut at the roots of our local system of education. He feared a very great and abrupt decline in the local interest in education if the control of the teaching body (and payment meant control) were withdrawn from the Local Authorities and vested in Whitehall. For this reason he was not prepared to recommend the House to adopt this treatment of the problem.

At present public opinion has gone with Mr. Fisher's judgment on this subject. But I think that the true reason for the public agreement with his conclusion is not to be found in a belief that the State payment of the teachers would necessarily lessen local interest in education, but in a suspicion (on the part of the teachers) that Civil Service conditions would ultimately be unfavourable to their financial prospects, and (on the part of the public) in an instinct that Civil Service for teachers would certainly mean undue restraint on the expression of opinion by the teachers, and might, in spite of Mr. Fisher's optimistic view, open the door to school propaganda of doctrines specially favoured by the Government. In fact, Mr. Fisher's statement on the subject, taken alone,

(Continued on page 152.)

## NOTES ON CORRESPONDENCE TRAINING.

### POSSIBILITIES.

Correspondence Training places the possibility of preparation for higher qualifications before every student in the land. Preparation is given for Certificate, Preliminary Certificate, L.L.A., A.C.P., L.C.P., Froebel, Degree Examinations, Languages, Science and Art, Matriculation, Oxford and Cambridge Locals, &c., &c. These and many others are placed within reach of all by the NORMAL CORRESPONDENCE COLLEGE.

### ADVANTAGES.

Correspondence training for qualifications neither demands attendance at College for long, set hours, nor does it interfere with the pupil's work or residence. It is within the reach of all—even of those in the most far-away villages—enabling them to qualify for better appointments. The training of the NORMAL CORRESPONDENCE COLLEGE, given by an expert staff of tutors, is so clear, systematic, and thorough that success is assured to the diligent student.

### THE RESULTS.

Correspondence training for higher qualifications has enabled thousands of students, student-teachers, and teachers to obtain good appointments and promotion. More than **5,000** Distinctions and Honours have been won at Public Examinations by Pupils of the NORMAL since **1907**, and what the NORMAL has done for thousands it will do for you. The call of the future is for qualified teachers. Prepare now to improve your position by becoming a student of the NORMAL.

Write to-day for "THE NORMAL GUIDE TO SUCCESS," which will be sent free to readers of this paper.

### EXAMINATIONS FOR WHICH THE NORMAL PREPARES.

County Council Scholarships.  
Pupil Teachers.  
Preliminary Certificate.  
Certificate.  
Oxford Locals.  
Cambridge Locals.

College of Preceptors.  
Professional Preliminary.  
Froebel.  
L.L.A.  
A.C.P. and L.C.P.  
Central Welsh Board.

Matriculation.  
Degree Examination.  
Languages.  
Music.  
Science and Art.  
Other Qualifying Exams.

Single Subjects.—A pupil may join the Normal for instruction in any single subject.

47 Melford Road, East Dulwich, S.E. 22, and 110 Avondale Square, London, S.E. 1.

# THE COLLEGE OF PRECEPTORS

THE COLLEGE OF PRECEPTORS  
PROFESSIONAL PRELIMINARY EXAMINATION. — SEPTEMBER, 1917.

PASS LIST.

THE Supplementary Examination by the College of Preceptors was held on the 4th, 5th, and 6th of September in London and at ten other local centres, viz., Birmingham, Blackburn, Bristol, Cardiff, Edinburgh, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, Nottingham. The following candidates obtained Certificates:—

SENIOR.

Pass Division.

Jones, Miss E. | Matthews, G. B. *al.* | Vosper, F. P. *f.l.*

JUNIOR.

Honours Division.

Gordon, Miss L. P. *h.f.* | Robinson, D. G. *al.f.l.* | Sheard, G. R. *a.al.gm.*

Pass Division.

Allen, L. W. <i>al.gm.</i>	Corner, E. <i>al.</i>	Howard, C. D.	Penny, H. G. Y.
Angior, G. M. <i>al.</i>	Devlin, C. J.	Hughes, Miss N. <i>e.</i>	Sanders, G. A. I.

N.B.—The small italic letters denote distinctions in the following subjects respectively:—

*a.* = Arithmetic. | *e.* = English. | *gm.* = Geometry.  
*al.* = Algebra. | *f.* = French. | *h.* = History.  
*l.* = Latin.

seems to show stronger reasons for Civil Service than against it.

Turning to the position of the secondary-school master in the State-aided or State-provided school, he said justly that that branch of the profession has still to be made reasonably attractive to a really able man. "The secondary-school teacher is ill paid. He receives no pension and yet his is a profession which ought to compete on equal terms for ability with the First Class of the Civil Service. In no advanced country but England will you find so large a proportion of secondary-school teachers without a University degree. In no country is the gulf between the career of the secondary-school teacher and the career of the University teacher so clearly marked. Somehow or other, we must attract able men into this branch of the profession and provide them with a sufficient number of pupils able to receive a full secondary education."

After speaking of his hope to lessen the great multiplicity of examinations in secondary schools, he mentioned the suggestion that secondary-school education should be free. "The establishment," he said, "of a system of free secondary education is an ideal with which I have very great sympathy. It may be thought that the simplest way of attaining this object would be to abolish all fees in secondary schools. That would mean that, if the schools were to go on even at their present level of efficiency, the State would have to find a revenue of about £1,000,000 a year." Mr. Fisher doubted whether there were many reforms worth having which could be achieved in this way by a stroke of the pen, and he considered that the assumed advantages of this particular reform would be more than counterbalanced by administrative and educational difficulties. "It must be remembered," he said, "that a great part, and not by any means the least valuable part, of education is supplied by schools controlled by Governing Bodies which are only loosely connected with the Local Education Authorities or with the Government. For this reason the administrative and financial operation of freeing secondary schools would not only be much more complicated than is generally realized, but would certainly raise highly controversial questions."

His conclusion was that more should be done by the provision of free places and scholarships to place the advantage of secondary education within the reach of all children who are able to profit by it. We should concentrate, in the first instance, on the organization of a better system of maintenance allowances, especially in the upper parts of our secondary schools. We want "the son of the manufacturer, the son of the foreman, and the son of the workman to be educated side by side. We do not want a caste system in education. We want social fusion. And the best way of securing social fusion in the secondary schools is to have a system under which well-to-do parents contribute their fees and help to support the school, while the children of poorer parents are assisted, and liberally assisted, by free places and maintenance allowances." On the whole, I think that the mass of lay opinion is at present in favour of Mr. Fisher's conclusion on this subject. On the other hand, I find that there is a rapidly growing body of opinion in authoritative and experienced quarters in favour of the abolition of school fees in secondary schools which are provided and maintained out of public funds. The scholarship system has great drawbacks. The huge examinations which it involves do not necessarily select the whole of the most promising pupils. The offer of maintenance allowances is at present limited in scope, and would be very difficult to apply on an immense scale, because of the delicacy of the private investigation which would be involved in the consideration of each case. Moreover, a great number of families which thoroughly deserve help in the education of their children are not brought within the range of the scholarship system at all, and are ineligible for maintenance allowances. The fact that secondary education was free would be in itself a standing demonstration of its accessibility to all. The offer of free secondary education would have, in other words, an emotional value which in its turn would produce great social and economic effects. And in favour of the scheme stands American and Dominion experience. The trend of things in democratic countries is towards having free secondary education in schools provided by the State. On the other hand, it would be necessary as well as just that a large number of our schools should be allowed to remain free from the directive control of the Local Education Authorities. Many of these are boarding schools. Others are

under the charge of responsible and experienced Governing Bodies. It is right and just that a large number of these schools should continue to receive help from the State and also from the Local Education Authorities. The abolition of school fees would in their case involve a complete change in their government and status. Side by side, therefore, with the free municipal or county secondary schools, there would have to be State-aided schools under independent management in which fees would be allowed. And to the right wing of these would stand the private schools, many of which are excellent and some of which not only deserve but need help from public funds. I think myself, therefore, that it is probable that in a few years' time the abolition of fees in secondary schools under public management will be adopted by the Government. But Mr. Fisher is probably right in thinking that this is not the reform which has the most urgent claim upon our attention.

There is another reason in the background why some measure of free secondary education is likely soon to become a matter of practical politics. To this reason Mr. Fisher alluded in another part of his speech, though in a different connexion. He reminded the House of Commons that only a small minority of the children who leave school at twelve, thirteen, or fourteen years of age receive subsequently any kind of systematic training. Something, he said, must be done to provide continued education for all the young people of the community. He spoke on this subject with caution and reserve. He was anxious not to disturb the labour market during the War. He realized the difficulties of agriculture and of industry, and was anxious not to perplex the business calculations either of those who employ or of those who are employed. But he expressed the hope that Parliament might see its way at an early date to assent to a measure which, as he implied, would carry forward education for all through the years of adolescence. Now this, in some form or another, means universal secondary education—not necessarily education given in secondary schools of the types to which that name is at present assigned, but an education given in schools which are liberal in temper, many-sided in their activities, conducted in the day time, full of corporate life, practical in their outlook, and yet at the same time not deficient in the influences of a liberal and artistic training. But, if attendance at such schools as these is made compulsory on all young people from fourteen to seventeen or eighteen years of age, will not the argument in favour of free secondary education be greatly strengthened? An education which is made compulsory is almost inevitably an education which is made free. The sacrifice which all true education involves—a sacrifice affecting parents and children alike—is not one which can be measured in terms of school fees alone. It is the sacrifice which is summed up in self-discipline, in concentration of purpose, and in self-preparation for the future.

M. E. SADLER.

## REVIEWS.

*The Organization of Thought.* By A. N. Whitehead.  
(6s. net. Williams & Norgate.)

With one exception, the eight chapters of this book are made up of lectures and addresses delivered on separate occasions. Prof. Whitehead tells us that the various parts of the book were, in fact, composed with express reference to each other, so as to form one whole; but, while we recognize the congruity of the various presentations, we cannot say that we discover a unity. The addresses fall into two sections, the first five having a specifically educational bias, the remaining three concerning themselves with certain points arising in the philosophy of science. Again, we are told that a common line of reflection runs through the whole, and that the two sections influence each other; but we cannot recognize the book as an organic whole. Naturally, we are interested mainly in the educational sections, and we may say at once that four of the five educational lectures are of permanent value, the fifth having only a passing interest for those who happened to be interested in a certain polytechnic. The subjects of the four lectures that have impressed us are: "The Aim of Education," "Technical Education," "The Mathematical Curriculum," "The Principles of Mathematics in Relation to Elementary Teaching."

The value of the book is that it gives us the first-hand results of the application of one of the best intellects among our contemporaries to the practical problems of the school. No doubt the whole has a mathematical bias, but Prof. Whitehead is far too big a man to be narrowed by his speciality. No better testimonial could be given to the breadth of view that may go along with profound knowledge of mathematics than is supplied by these pages. Our schoolmen are greatly in need of the broad humanity that can impress upon them the doctrine that "work is play and play is life." Mr. Caldwell Cook, whose recent book on "The Play Way" advocates the same principle in a more light-hearted way, must welcome the support of Prof. Whitehead's heavy artillery. Our author has the happy knack of stating in unexpected and striking ways propositions that surprise us, but that we all admit to be true when we look into them. Popular fallacies are hit off here and there in a very happy way—for example, "the illusion that a more complete culture was possible when there was less to know," and "the mistaken idea that problems test ability and genius, and that bookwork tests cram." When Prof. Whitehead deals with the principles of mathematics in relation to elementary teaching—where, of course, *elementary* does not mean the grade of school popularly so called—he makes out a capital case for the simplification of the course without any sacrifice of its thoroughness. His attack on reconditiveness will be welcomed by the broad-minded schoolmaster, and even practical physicists and engineers should be convinced by his claim for intelligence even in the use of reference pocket-books. Perhaps our author comes a little close to the fallacy of formal discipline in his treatment of the educational effects of mathematics as a school subject. But, after all, most teachers are now convinced that there is enough truth underlying the fallacy to make us careful in rejecting wholesale the claims of the formalists. In any case, Prof. Whitehead keeps within safe limits. Our profession will cordially welcome his help as offered in these discourses.

*The Distribution and Relations of Educational Abilities.*  
By Cyril Burt. (2s. 6d. net. London County Council per P. S. King & Son.)

In a Prefatory Memorandum Sir Robert Blair claims that "this volume is the first of its kind in Europe or elsewhere." Dr. Burt, as all the world knows, is the professional psychologist of the London County Council. One of his chief functions is to determine the actual and the most suitable lines of demarcation between children in the ordinary schools and children admitted to special schools for the mentally defective. To do this it is necessary to make very careful and elaborate investigations, and this Dr. Burt has done in the most satisfactory way, making full use of all the new statistical methods and psychological formulae. Mathematical psychology is yet in its infancy, and there is a danger that the use of the rigid formulae may convey an impression of accuracy that is hardly justifiable. No doubt once the material on which the mathematical psychologist works has been reduced to mathematical expressions, all the rest is absolutely reliable. The trouble is that the material itself, in the first instance, has to be obtained by processes in which individual observation and judgment play their part with all their liability to error. Of this Dr. Burt is fully aware, and he takes all possible precautions. Further, he realizes that, in pioneer work of this kind, it is impossible to avoid making assumptions that later research may prove to be inadmissible. He accordingly puts forth his results in a tentative and non-dogmatic way that goes far to secure the confidence of his readers.

He assumes and analyses the common factor of "general educational ability," and arranges the special educational abilities into four groups: Arithmetical, Manual, Linguistic, Literary. Dealing with normal children, he finds that the standard of deviation—that is, the range within which pupils may vary in intelligence from the norm that corresponds to their age—is throughout about one-tenth of their age. Thus, at the age of five, the variation extends from half a year below to half a year above the norm: at ten, the range is one year; at fifteen, in all probability, nearly one and a-half years. He comes to the important conclusion that by "backward" children should be understood those who, though not defective, are yet unable in the middle of their

school career to do the work of even the class below their age, and are retarded by about 15 to 30 per cent. of their age. Very important are Dr. Burt's tentative suggestions regarding the causes and treatment of backwardness. We cannot go into the details by which he reaches the conclusion, but it is obviously of the greatest value to have such a generalization as "the educational attainments of a 'defective' correspond on an average to those of a 'normal' just over half his age." As a practical application of this, we have the recommendation that "No child who has three-quarters or more of the educational attainments proper to his age should be even considered as a potential candidate for admission to a Mentally Deficient School." Naturally, Dr. Burt deals also with those who are above the average, for this is of practical importance in the allocation of scholarships and free places.

Altogether, the London County Council are to be congratulated on the work they have set Dr. Burt, and he on the brilliant way in which he has carried it out.

*The Principles of Rational Education.* By Charles A. Mercier.  
(The Mental Culture Enterprise.)

This book of 87+xi pages reads like an unduly expanded letter to the *Times*, and, in fact, begins with the reprint of a letter sent by its author to that newspaper. Mr. Mercier appears to be a born controversialist, so it was hardly to be expected that he could resist the example of Sir Clifford Allbutt's letters to the *Times Educational Supplement*. In any case, we have here his five fiery chapters:—I, The Child: Nature and Nurture; II, The Aims of Education; III, The Cultivation of Faculty; IV and V, The Imparting of Knowledge. The book is strongly reminiscent of Herbert Spencer's "Education," and is none the worse for that. Dr. Mercier adopts the Spencerian view that the aim of education is to prepare for complete living, though the adjective "complete" is omitted from the text. The student of education cannot but be astonished at the familiar ring of all that Dr. Mercier has to say about the principles of education. It is no doubt new to him, and, if he has not found it in the pages of the standard writers, it is all the more credit to him that he has discovered it on his own account. But really he must not run away with the impression that he is preaching a new evangel. If he were to take the trouble of looking in at some of those University courses in pedagogy of which he speaks so jauntily, he would be surprised to find how completely his "principles" have been anticipated. It is only fair to say, however, that it is the public-school master against whom Dr. Mercier tilts. He is willing to admit that elementary-school masters and schoolmistresses have a real interest in their work, and when he lectures to them they are "most eager to learn." But with the public-school masters it is very different. They "say to themselves, Evil, be thou my good: Ignorance, be thou my knowledge." We regret that the attack is so violent, for with much that our author says we are in cordial agreement. The public schools do need reformation. The masters themselves feel this, and he who strengthens them in this conviction is doing a good work. But we fear that Dr. Mercier's method will rather serve to stiffen their hard necks. Still it may be that this attack will have a good effect at second-hand by stimulating lay opinion. And, perhaps, after all, our author is wise in his generation in taking it for granted that his readers know nothing about the principles of education. It depends upon the people to whom he makes his appeal. If the book is meant for the man in the street, it should serve its purpose well, and we ought to welcome it as a missionary effort to bring support to ideals that all progressive schoolmen are pursuing. We can honestly say that the book is well written, full of interesting illustrative matter, and altogether attractive as well as provocative.

*The Loom of Youth.* By Alec Waugh.  
(6s. Grant Richards.)

School stories are usually one of two types. Either they are written by practised writers whose school days are long past and shrouded in the mists of time, writers who philosophize over the schoolboy character and who are probably untrustworthy as to the details of school life and have forgotten the schoolboy's attitude; or they are stories of pranks

and rags written to amuse boys. This class makes little claim to verisimilitude; the heroes rank with the omnipotent midshipman of a preceding generation of writers. "The Loom of Youth" belongs to neither of these categories. The author, so we are told in the preface, was seventeen when he wrote the book, and he produced it in two months while he was undergoing military training. It follows naturally that, viewed as a work of art, the book shows many weaknesses. To the reader who takes up a novel in order to be thrilled or amused, this book may appear dull. But to the parent who wants to know what school life is like, to the schoolmaster who would like to see himself as the boys see him, the book is extraordinarily interesting. Mr. Waugh's schooldays are fresh in his mind. He philosophizes and moralizes very little; but he gives us a sincere picture of the life he had just spent. Three things stand out vividly, and a fourth is hinted at: games, idleness, swearing, and coarseness. Games are the one thing that matter. If you are good at games, you may do some work without losing caste, not otherwise. The artificiality of games as the one real interest in life is felt by the author, and during the year 1915 the interest of the school slackens. The prevailing idleness in reference to school work and all matters intellectual is emphasized again and again. If a master insists upon a certain show of work done, a system of cribs is easily arranged; with other masters it is possible to spend the whole hour in ragging. The sixth form prefer to specialize on History, because this enables them to spend the greater part of each school day in their studies doing precisely what they like. It is fair to add that some of them read Swinburne, Byron, and Browning. In conversation among themselves, and even sometimes with the masters, the words "damn," "hell," and "devil," weary the eye on every page. The author evidently wants parents to know the vocabulary in use, or at least part of it. For just as evidently he shrinks from putting on paper the coarseness of language and immorality of action that are prevalent; but he indicates the prevalence with unmistakable emphasis.

*God the Invisible King.* By H. G. Wells. (6s. net. Cassell.)

In "God the Invisible King" Mr. Wells carries the principles of Protestantism far beyond the limits of the Protestant Reformation. He has found God the Spirit within himself, and at the same time pervading the universe. He seeks for no authority except his own feeling, and he would have every man and woman go and do likewise. The God that each man will find, if he looks within himself and without on the world, is the same God. Mr. Wells looks forward, therefore, to the time when everyone will profess the same God; when religious animosities will disappear; when God the Invisible King will be recognized as the ruler of life. For this position he gives no authority, adduces no argument, beyond his own thought and feeling. He is entirely sincere, and it is probable that a man who had reached Mr. Wells's stage of intellectual development, and whose life had been subjected to the same influence, would feel as Mr. Wells feels. "This is a religious book, written by a believer," he tells us.

The main trend of his writing is to separate God the Creator from God the Redeemer. The vain attempt to reconcile these two ideas has been the cause of confusion and difficulty in religious thought. Of God the Creator he declares he knows nothing, and he doubts if human knowledge will ever reach to such an understanding; but of God the Redeemer he can speak with sincere faith. So strong is his feeling against all established religions that attempt to explain the creation of the world, and to make such an explanation an article of faith with the believer, that he would sweep away all organized religion as it exists to-day. He takes the Nicene Creed as representing the Christian cosmogony, and spends much effort on showing its futility. He has no patience with any religious forms: he fails to see that others have found God through them as completely as he has found God "as a still small voice within."

The charm of Mr. Wells is that his mind is never still. He has no settled philosophy that he dishes up again and again in fresh forms. Each book marks a development. In "Old and New Things" he protested against formal religion; in the present book he writes of the religion that he has found. It is a religion that many have also found, and the world is

ready for a statement of it in language relieved of the subtleties of philosophic phrases.

*The Student's Guide.* By John Adams.

(3s. 6d. net. University of London Press.)

Prof. Adams happens, in the course of this book, to mention a series of Ruskin's lectures on art, which was published under the title of "The Eagle's Nest"; and the thought arose that, if Mr. Ruskin could have been called into consultation, he would have devised a title less chilly and more human than "The Student's Guide" for the volume before us. For there is a human warmth pervading all the pages in which the author tries to help the inexperienced student to understand himself, his powers, and his aims, and to make the best use of his strength in overcoming his weakness. "What man has done, man can do" was Mr. Lewisham's motto, and we might adapt it by saying that what the author recommends he has himself done. The standard set is a high one, but it can be approached more nearly every day, as the student takes himself in hand and learns to develop his powers and train his character: the two aims are closely interwoven. It is possible that the Professor may have given the gist of this book in his lecture room, but the chapters do not read quite like reproduced lectures. If they are so reproduced, their value is not lessened, for students who are "visuals" prefer to study the printed page, and those who are "audiles" need to refresh their memory of what they have heard. Also the book will appeal to a wider circle than the Professor's audiences. Throughout the book the style is simple, direct, and sincere; the counsel given is sane and possible of realization. With its help the years of studentship may be made "to pay dividends in spiritual and mental mastery." The author gives practical advice on how to memorize, how to take notes, how to divide the working hours, and how to prepare for examinations. He warns his readers that study alone may make a pedant; but perhaps he does not allow sufficiently for the discussion among students that is very helpful to their sound development. Mr. McKenna makes one of his characters in "Sonia" say something to this effect: "It does not seem to matter what you learn, provided you meet plenty of people who have learnt something else." The free interchange of thought that is delightful to young men is also a great aid to sound study.

*The Camp School.* By Margaret Macmillan.

(3s. 6d. net. Allen & Unwin.)

This little book gives a clear and attractive account of the pioneer work done by Miss Margaret Macmillan and her sister in connexion with school clinics and school camp life. It contains a curious combination of the poetic, the dramatic, and the didactic; the style adopted in each case is exactly suited to the subject-matter, so that the book is as attractive as it is instructive. Miss Macmillan understands the merits and defects of the German system, and makes clear certain dangers of our adopting some of the bad elements from the Fatherland. Her criticisms of our own bureaucratic methods take the form rather of giving examples of miscarriages than of making complaints. Considerable attention will no doubt be given to her account of the refusal by the London County Council of an offer of £5,000 to finance a scheme for a health centre. Miss Macmillan holds as her main thesis that for curative treatment it is necessary to get poor and neglected children brought under satisfactory living conditions. She found that in the clinic the young patients sometimes got cured through mere medical treatment, but were very liable to come back again in a short time with the same complaint; while in some cases mere medical treatment failed to cure at all, this occurring in cases that were rapidly cured when the children were brought under good conditions in a camp or elsewhere. The account of the various camps established by Miss Macmillan is, on the whole, very encouraging so far as the actual work is concerned, though somewhat depressing when we regard the official treatment of them. Miss Macmillan lays just stress on the need for the training of the active side of child nature, particularly in the case of those with a poor physique and an unsatisfactory environment. We must secure mental progress for all. Miss Rachel Macmillan put the matter very strikingly when she said: "To-day

(Continued on page 156.)

# MACMILLAN & CO.'S BOOKS.

## W. & A. K. JOHNSTON'S MAPS, &C.

MAPS I-IX NOW READY.

### WALL ATLAS OF EUROPEAN HISTORY.

An entirely New Series of History Maps.

Designed to show at a glance the Chief Political Changes and National Movements from the **FORMATION OF THE ROMAN EMPIRE TO THE BEGINNING OF THE GREAT WAR, 1914.**

### Word and Phrase-book to same.

With French Translation for Homework. Sewed, 6d.

### Key to Appendices.

2s. 6d. net.

### Elementary French Exercises.

By Rev. B. V. F. BRACKENBURY, M.A. Limp cloth, 1s. 6d.

[Key in the press.

*THE SCHOOLMISTRESS*.—"A well-arranged and useful textbook."

### Elementary Dynamics of the Particle and Rigid Body.

By Professor R. J. A. BARNARD, M.A. 6s.

*THE SCHOOL WORLD*.—"Should be found useful in the upper forms of schools and by the junior students in University Colleges. The treatment on the whole proceeds on familiar lines, but this does not preclude freshness in the exposition of particular parts of the subject, and the book impresses one as providing a very clear and sound introduction to the science."

### A Class-Book of Organic Chemistry.

By J. B. COHEN, Ph.D., B.Sc., F.R.S., Professor of Organic Chemistry, The University, Leeds. 4s. 6d.

MACMILLAN & CO., Ltd., ST. MARTIN'S STREET, LONDON, W.C.2.

we keep our people always fourteen years old. In my classes in Kent I found that an upper-class child of twelve to fourteen could, as a matter of fact, nearly always outstrip the village women." It is to be hoped that the insistence in this book on the need to think more of the teachers and less of the mere buildings will be taken to heart by those in authority. "The Camp School" deserves the respectful attention of all who have any responsibility for the education of the country.

*Sonia: Between Two Worlds.* By Stephen McKenna.  
(6s. net. Methuen.)

The condition of the world, socially, economically, and politically, after the War is an attractive subject of speculation to the imaginative writer. Mr. McKenna, writing after one year of war, sees society purified and strengthened; but he puts in a cautionary remark to the effect that ten years after the French Revolution, and ten days after Waterloo, when corruption ought to have been purged out of the world, things went on just as before. In this novel *Sonia*, herself the type of the society butterfly, determined to have a good time and thinking of nothing beyond the present enjoyment, is purified by the War. All Mr. McKenna's characters tend to become types rather than individuals, and they are none the less interesting for that. They cover modern society and the governing classes as they existed before the War. The account of their lives gives the reader the whole of the social and political history of the years 1898-1915 from the point of view of the public schools and the Universities. The public school of the story is no doubt purposely confused, that it may not be recognized with certainty. The head master may have been one of three men. The school life of the group of heroes is treated with such fullness that "*Sonia*" must be included among stories of school life. The public-school caste will never be again what it was before the War. David O'Rane, who may be perhaps described, *primus inter pares*, as the hero, is a somewhat shadowy abstraction. He is described to the reader as a boy of extraordinary mental power, a seer of visions, and a type of the clear-souled man who may arise after the War; but we have to take him from the description: neither his words nor his deeds convince us of his powers or of his reality.

*W. E. Ford: a Biography.* By J. D. Beresford and Kenneth Richmond. (6s. net. Collins.)

This biography is described on the outer cover as the story of a man who lived before his time. But, so the joint authors would have us believe, not so far in advance of his age as to be unintelligible to men of to-day. Bergson and Clutton-Brock, to mention two only amongst modern seekers after spiritual truth, have to some extent indicated the lines along which the subject of this biography was working. As a character W. E. Ford is somewhat shadowy, and we doubt not that the form of the book is a literary fiction to enable Mr. Beresford and Mr. Richmond to state, or rather to suggest, their views about life. To the readers of this paper it may be supposed that the chapters bearing on education will be of chief interest. W. E. Ford laid down no complete philosophy of education, but he carried on a school for some years—until, in fact, the boys and girls began to climb towards fifteen years. Then he parents, even sympathetic ones, began to hesitate and to wonder if the children would pass the examination that would enable them to get the guinea stamp that gives commercial value to the gold. The Fifth Form in the school was never properly started, and Ford, seeing that his ideas were at present impracticable, relinquished the school. It was a day school—he was in favour of children remaining at home both for their own sakes and for the sake of their parents. The failures of home training, which he was forced to admit, he put down to the absence of any tradition of home life among the well-to-do classes owing to the use of boarding schools for many generations. "Artificial orphanages" is a phrase used in the book to describe boarding schools. Perhaps W. E. Ford was not so very much in advance of his time after all—for very many readers will find in this book a description of what they are trying to do, and they will be encouraged and strengthened by the lofty ideals perpetually kept in view.

*The Religious Difficulties of Children.* By E. E. Read Mumford.  
(2s. net. Sunday School Union.)

As anyone familiar with Mrs. Mumford's writings would expect, this little book is full of charm. Its author has lost none of her cunning; her sympathetic insight into child nature is as keen as ever, and, wherever it is possible to meet a childish difficulty, she is ready with a sensible solution. The nature of God and the stumbling blocks of death and suffering are well handled; but it is no discredit to Mrs. Mumford that she is unable to deal satisfactorily with the problems of prayer, of the Holy Trinity, and of the Atonement as they present themselves to the child's mind. One would like to say that teachers and parents should let such matters alone till children come to maturer years, but some of them at least force themselves upon our attention whether we will or not. Perhaps the Trinity and the Atonement may be reasonably postponed, but the question of prayer is too urgent and too much a matter of everyday religious life to be put off, and the children see to it that we are not allowed to shirk its difficulties. So far as it is possible to explain such erudite matters at all to children, Mrs. Mumford has succeeded, and that is saying much.

## GENERAL NOTICES.

### EDUCATION.

*Public Education and the War.* An Answer to the Attack upon Eton Education. By T. Pellatt. (2s. 6d. net. Duckworth.)

Mr. Pellatt is not on the Eton staff, but he is a schoolmaster with an intimate knowledge of that school, and a complete admiration for its scheme of studies. He deals in a trenchant way with the attempt recently made to organize the parents of boys at Eton and at other public schools, and to induce them to demand more science and less classics. He has no difficulty in finding weak spots in the contentions of the reformers and contradictions in their utterances. Eton stands impregnable, a monument for all time of the value of an education based on classical study, whatever waves of modernism may beat against its walls. This is Mr. Pellatt's attitude, and he maintains it with energy and skill.

*The Public School System.* In Relation to the Coming Conflict for National Supremacy. By W. Seymour Bryant. Preface by Lord Rayleigh. (1s. 6d. net. Longmans.)

Mr. Bryant's book serves as a counterpoise to the volume by Mr. Pellatt which is noticed above. The importance of education in the forthcoming economic contest is recognized, and an attempt made to estimate the value of the present school education as given to statesmen and captains of industry, and to indicate the direction in which it should move. Science is to be taught as an indispensable aid to mental training. The subject is treated thoughtfully and with considerable knowledge.

*Education To-day and To-morrow.* Addresses by P. E. Matheson. (2s. 6d. net. Milford.)

These addresses have been delivered either to schoolgirls, to teachers, or to general audiences. Some have appeared in print before. They are all worth reading for the feeling at the back of them for the real essentials that underlie all educational effort. In one of the papers Mr. Matheson makes a plea for more quiet, more opportunity for thought. Perhaps one virtue is left to the ancient Universities. Mr. Matheson is a busy man, as everyone knows, but in Oxford there are occasional times of peace, and from these the reader benefits.

*The Teacher's Book of Hints that Win Success.* (3s. 6d. net. Evans.)

The inexperienced teacher generally prefers a tip to a principle, and even experienced teachers whose principles of method are sound may welcome helpful wrinkles. The volume before us contains a number of useful hints classified under the subjects taught. The publishers state that they will be glad to consider proposed additions for a subsequent edition.

*Conference Papers.* (1s. net. London Teachers' Association.)  
The papers reproduced in this volume were read at a series of Conferences promoted by the London Teachers' Association in February and the following months of this year. As is natural, the papers deal mainly with the organization and curriculum of elementary schools, and with the juvenile worker and the training of teachers. But general questions are also discussed. A very interesting publication.

*Schemes of Work and Approved Time-tables.*  
(2s. 6d. net. Evans Bros., Ltd.)

This book is made up of a large number of schemes of work and

time-tables that have been approved by the Board of Education and by Education Committees. It is not suggested that they should be accepted *en bloc* by any intelligent teacher, but that a selection may be made of the nearest approach to what is required and the necessary modifications introduced. The choice is large enough and detailed enough to meet practically all cases, and in order to help in the choice there are a number of instructive paragraphs contributed by Directors of Education. A most useful compilation.

*Education Reform.* (5s. net. P. S. King & Son.)

This is the report of the Education Reform Council, organized by the Teachers' Guild. The object of the Council was "To consider the condition of education in England, and to promote such reform and developments as may appear desirable." The report runs to 215 x xxxii pages. The Foreword is by Dr. William Garnett, who edits the volume. The text consists of the reports of the various committees (ranging from letter A to letter I) with a note of the various memoranda submitted to them. The book represents a very solid piece of work, and will form a very valuable record of a state of educational reconstruction of which it itself forms an important element.

*The Message, The Messenger, and The Method.* By G. Currie Martin, Effie Ryle, and J. H. Wimmis. (1s. net; cloth, 1s. 6d. net. Headley.)

It would have been equally appropriate to notice this book under the heading of Religion, for it deals with Bible teaching in adult schools. The first of the three joint authors takes the Message, i.e. the Bible, and indicates the purport and aim of the lesson. The second author treats the Messenger, i.e. the teacher; and the third author deals with the Method of teaching. The three parts alike abound in helpful advice and suggestion.

*British Boys: their Training and Prospects.* By Colonel M. J. King-Harman. (2s. net. Bell.)

Colonel King-Harman writes with a hearty goodwill that carries the reader along through all the sins of omission and commission that are attributed to parents and teachers. He believes in the British boy of the boarding school, understands him, and speaks the words of sensible encouragement which do the boy good to hear. The volume covers almost every aspect of secondary school life: examinations, teachers, types of schools, geography, nature study, music, science, exercise, discipline, purity, food, and many more subjects.

#### ENGLISH.

*A Child's Bookshelf.* By Lilian Stevenson. (1s. 6d. net. Student Christian Movement.)

Miss Stevenson's compilation, with her helpful annotations and classification, is a book that parents and teachers may keep by them with great advantage. The special value of the book lies in the many new sources that are tapped and the wider connotation given to the phrase, "children's books." Some of the old favourites are mentioned, but there are hundreds of titles that will probably be new to those who are not in the way of making a special study of children's books. The children range from five to fifteen years of age. The Bishop of Wakefield, in a preface, says that the book is marked by "thorough research, good taste, and considerable insight into the child-mind."

*A Skeleton Outline of Old English Accidence.* By W. J. Sedgefield. (1s. 3d. net. Manchester University Press.)

This little volume is reprinted from the author's "Selections from the Old English Bede." It gives a condensed summary of Old English inflections which should enable the student to decline any noun, pronoun, or adjective, and to conjugate any verb met with in the course of his reading.

*Godwine.* By James F. Waight. (1s. 6d. net. Allen & Unwin.)

The first volume of a trilogy which dramatizes the efforts of the Godwine family to avert from England the invasions to which the land is exposed by the jealousies of the English Earls, whose factiousness eventually enables the Duke of Normandy to prevail.

*Short Essays for Schools.* For Fourth and Fifth Forms. With Specimens of Analysis and a Subject Index. Selected by S. E. Winbolt. (2s. 6d. net. Clarendon Press.)

A well selected series of fifty essays taken from standard English writers, and dealing with art, literature, morals, science, history, politics, and psychology. The method advocated is the study and analysis of the passage and the subsequent writing of an essay on a kindred subject. In schools where the value of English composition is recognized, this book should prove extremely useful.

(Continued on page 158).

## A SELECTION FROM A. & C. BLACK'S HISTORY PUBLICATIONS

By H. L. BURROWS, M.A.

### THE STORY OF ENGLISH INDUSTRY AND TRADE

Thirty-six Illustrations. 1s. 6d.

This volume presents in an attractive form a branch of English History which has not hitherto received the attention its importance merits, but which is now beginning to be widely studied. The book is intended for use as a reader and textbook for the upper classes of primary schools, and the lower and middle forms of secondary schools.

By EUGENE L. HASLUCK, B.A., F.R.Hist.S.

### AN INTRODUCTION TO THE HISTORY OF ENGLAND

With fifteen Sketch Maps. 2s. 6d.

This volume aims at delineating in clear outlines the main threads of our History, and at enabling the student to grasp the essential lines on which England has developed as a State. For these purposes a continuous chronological order has been abandoned, and where two or more distinct threads of development run through a long period, these have been dealt with separately in different chapters. This book will prove, it is hoped, a satisfactory textbook for use in the upper forms of schools, and a good knowledge of the contents of this volume should be sufficient for the purposes of the London Matriculation Examination.

By M. W. KEATINGE, M.A., D.Sc.,  
Reader in Education in the University of Oxford; and  
N. L. FRAZER, M.A., Head Master of Ilkley Grammar School.

### DOCUMENTS OF BRITISH HISTORY

In One volume. Price 4s. 6d. Or in Six Sections.  
Limp Cloth. Price 10s. each.

Sec. I. A.D. 78-1216. Sec. IV. A.D. 1603-1715.  
" II. A.D. 1219-1399. " V. A.D. 1715-1815.  
" III. A.D. 1399-1603. " VI. A.D. 1815-1900.

These Documents, with the exception of Section VI, are reprinted from "A History of England for Schools," by the same authors.

### ENGLISH HISTORY ILLUSTRATED FROM ORIGINAL SOURCES

From earliest times to A.D. 1066. With 36 Illustrations.  
1066-1216. With 35 Illus. 1485-1603. With 31 Illus.  
1216-1307. With 21 Illus. 1603-1660. With 33 Illus.  
1307-1399. With 14 Illus. 1660-1715. With 29 Illus.  
1399-1485. With 28 Illus. 1715-1815. With 11 Illus.

Price 2s. each.

The plan of this series is so laid that interest in the textbook or in the teacher's words is stimulated by supplementary reading, and sufficient premises are given to allow of a reasonable and reasoning deduction. The extracts are taken from contemporary authors, or are themselves contemporary documents, and have been chosen to illustrate as fairly and as vividly as possible the really important events of the period, and to explain the motives of the chief actors.

### BLACK'S HISTORY PICTURES

Selected and edited by G. H. REED, M.A.  
In special detachable file portfolios. Price 1s. 6d. each period.

OUR EARLY HISTORY THE STUART PERIOD  
THE MIDDLE AGES THE EARLY GEORGES  
THE TUDOR PERIOD MODERN ENGLAND

Questions and Exercises are provided, and Explanatory Notes draw attention to the chief features of the pictures, and add interesting information relative to them. Maps are also included, because it is expensive and often difficult to provide historical atlases sufficiently detailed for use in the study of events under discussion.

A. & C. BLACK, Ltd.,  
4, 5, & 6 Soho Square, London, W. 1.

*Lectures on Style and Composition.* By E. Classen.  
(3s. 6d. Macmillan.)

A series of lectures originally prepared for the students of the Science Faculties of the University of Manchester. The purpose of the lectures is to afford instruction in essay-writing, and also to give a groundwork of general principles by the aid of which the works of selected prose writers might with advantage be studied.

#### LATIN.

**A Latin Course.**—(1) *Biennium Latinum.* A Translation and Composition Book for Beginners. 2s. 6d. net. (2) *First Rules for Latin Prose.* With Hints and Examples. Folded Card, 8d. net. (3) *Further Rules for Latin Prose.* 2s. net. (4) *Exercises on Rules for Latin Prose.* 2s. 6d. net. By T. C. Weatherhead. (Cambridge University Press.)

Mr. Weatherhead provides what he considers a full course for beginners, with the exception of accidence. Some Latin grammar is needed in addition. The course has been tested by many years' work in several schools. Its aim is to make the study of Latin serious and thorough; not to give the boy so much help that his natural energy finds no outlet. The first two books are for use together, and when these are done the second pair comes into use. It is refreshing in these days of predigested food to find a publisher bold enough to issue a series of books written because the author thinks that the beginner is having things made too easy for him.

#### FRENCH.

*Hernani* (Victor Hugo). Edited by M. B. Finch and J. L. Gardiner. (2s. 6d. Clive.)

A very valuable edition for the numerous more advanced students who wish to read this play. There are a few notes dealing with linguistic points or historical allusions; and a full introduction by Miss Gardiner, tracing the historical circumstances which had moulded the Spanish Court of the period, and explaining the literary theories which guided Hugo's writing.

*Graduated French Dictation.* By Sydney H. Moore.  
(2s. 6d. net. Cambridge University Press.)

Mr. Moore explains in his preface exactly what dictation can do and how far it helps the pupil in the use of the language. Most teachers will agree as to its great value; many teachers will also agree as to the difficulty of finding hurriedly a suitable passage. Two hundred passages, arranged for different forms, are given; and also some passages in English for a Sixth Form, to be turned into French as dictated.

"Heath's Modern Language Series."—*French Plays for Children.*  
By Josette Eugénie Spink. (1s. 3d. net. Harrap.)

Seven little plays that have been tested in class work and acted by the children in a Chicago elementary school. They are simple and interesting; the parts include boys and girls; there is a vocabulary.

"Oxford Plain French Texts."—(1) *La Chèvre de M. Seguin* (Daudet); (2) *Le Lac de Gers* (Töpffer); (3) *Le Coup de Pistolet* (Mérimée); (4) *Paris Menacé: Paris Sauvé*; (5) *Le Chien de Brisquet* (Nodier); (6) *Laurette* (de Vigny). Vol. IV is edited by G. H. Clarke; the others by H. L. Hutton. (6d. net each volume. Clarendon Press.)

Pleasant little volumes in limp cloth; type clear, and of a suitable size. About forty pages of text. Experience has shown the value of such books; they should be numerous. A fortnight is quite long enough to read one volume.

#### HISTORY.

*Stories for the History Hour.* From Augustus to Rolf.  
By Nannie Niemeyer. (3s. net. Harrap.)

A book that may be used freely for reading aloud to young children, though the author would prefer that the stories should be told and not read. The former is undoubtedly the better method if the teller is equal to the task. The stories cover the period B.C. 50 to A.D. 900. The book appears in a paper wrapper (bound in the course of time to be discarded), with an attractive illustration, which does not appear to be repeated in the volume. When the wrapper is removed there is nothing distinctive about the binding.

*Stories of the Scottish Border.* By Mr. and Mrs. William Platt.  
Sixteen page illustrations by M. Meredith Williams. (1s. 9d. Harrap.)

Another volume in the "Told Through the Ages" series, produced in the same attractive style. Two hundred and fifty pages of reading matter, chiefly in prose, but with some verse.

*A Notebook of Medieval History.* A.D. 323—A.D. 1453.

By C. Raymond Beazley. (3s. net. Clarendon Press.)

Dr. Beazley finds that the Middle Ages bear more directly on our

lives in the twentieth century than do more modern times. Then the spirit of nationalism was active, as it is to-day. The book arranges the chief events in European history in chronological order in brief periods. As an example of the method, we find on one half-page that Benedict XI releases Philip of France from excommunication; that there are fresh risings in Scotland, and Edward overruns the country; that the Cloth Hall at Ypres was completed; that Petrarch was born; and that the University of Orleans was incorporated. There are over two hundred pages of notes and an index.

*Pages of Britain's Story, A.D. 597—1898.* From her Historians and Chroniclers. Edited by J. Turrill. (2s. 6d. net. Clarendon Press.)

A number of extracts from writers of repute, dealing with events from the coming of Augustine to the funeral of Gordon. Bede, Froissart, Hakluyt, Carlyle, Thackeray, Scott, Horace Walpole, and many other writers are quoted in the three hundred pages that form this volume.

*Sir Walter Raleigh.* Selections from his "History of the World," his "Letters," &c. Edited, with introduction and notes, by G. E. Hadow. (3s. 6d. net. Clarendon Press.)

This is a book for the scholar, though the general reader may get enjoyment and profit from it. There is a full introduction, followed by about 130 pages of the "History," thirty pages of "Letters," a reproduction of Raleigh's map of the world, and a few pages of notes.

*Lord Kitchener: The Story of his Life and Work.*

By Donald A. Mackenzie. (1s. Blackie.)

Lord Kitchener's name is, and has been, one that has had especial power to arouse enthusiasm and inspire action. For forty years his life was full of activity in Egypt, India, Africa, and Europe. This volume for use as a reading book in school will therefore be found of great interest. There are several illustrations.

#### GEOGRAPHY.

"Macmillan's Geographical Exercise Books."—Key to No. IV: *The Americas.* With Questions. By B. C. Wallis. (2s. 6d. net. Macmillan.)

Many of the questions in this series are in the nature of problems, which may need for their solution a search through several books if the teacher be not a specialist in the subject. The hints given in the present volumes are very apt, and will save the class teacher much time.

"The Oxford Geographies."—Vol. I, *The Preliminary Geography.* (1s. 6d.) Vol. II, *The Junior Geography.* (2s.) Vol. III, *The Senior Geography.* (2s. 6d.) By A. J. Herbertson. New editions revised by O. J. R. Howarth. (Clarendon Press.)

Prof. Herbertson's "Geographies" are well established. The number of editions shows that they are widely used. The titles of the three volumes indicate the range of work covered—i.e. the first volume for the Preliminary school examinations of the Universities; the second for the Junior; and the third for the Senior. Each volume is complete in itself, and contains a number of illustrative maps.

*Sketch Maps.* Illustrating Important Phases in the Great War. With Historical Notes. August 1914-May 1916. By P. R. Clauss. (1s. net. Blackie.)

Beginning with the retreat from Mons, we have then the battles of the Marne and the Aisne; then the fighting from the first battle of Ypres to the battle of Loos. The French front in Champagne and Argonne; the Eastern front in Galicia and Poland, East Prussia, and Northern Russia are dealt with. The final chapters refer to the Balkans, the Dardanelles, Mesopotamia, and the Caucasus. At each opening there is a clearly drawn map, with explanatory letterpress on the opposite page.

*Large Scale Map of the Salonika Front.*  
(1s. net, paper; 1s. 6d. net, cloth. Bacon.)

Greece, Serbia, and Bulgaria printed with great clearness, so that every name can be read without difficulty; coloured contours, so that levels can be seen at a glance; railways, main roads, and frontiers clearly marked. Scale, about six miles to an inch.

*Bengal, Bihar and Orissa, Sikkim.* By L. S. S. O'Malley.  
(6s. net. Cambridge University Press.)

This is a volume in the Provincial Geographies of India Series, under the general editorship of Sir T. H. Holland. It is intended for serious and adult students, and deals with the physical aspects of the regions, the mines and minerals, the flora and forests, administration, history, archaeology, religions, languages, agriculture, industries, and commerce. There are a number of maps and other illustrations.

1917.  
THE COLLEGE OF PRECEPTORS

INCORPORATED BY ROYAL CHARTER  
BLOOMSBURY SQUARE, LONDON, W.C.1.

LECTURES FOR TEACHERS  
ON THE  
SCIENCE, ART, AND HISTORY OF EDUCATION

COURSE OF TWELVE LECTURES ON  
THE IDEAL AND THE ACTUAL IN PRESENT DAY EDUCATION

To be delivered at The College of Preceptors, Bloomsbury Square, London, W.C.1., on Thursday evenings  
27 September to 20 December, 1917

By JOHN ADAMS, M.A., B.Sc., LL.D., F.C.P.,  
Professor of Education in the University of London.

The Course of Lectures (the Second Course of the Forty-fifth Annual Series) began on Thursday, September 27th, at 6.30 p.m.

In view of the present educational unrest, this Course will treat the practical problems of the school in such a way as to supply teachers with the data necessary to form just conclusions about the lines to be followed in the changed conditions that are coming. While preparing for whatever developments may lie before them, teachers must carry on in the meantime. The lectures accordingly will take account of things as they are, though keeping well in view the problem of how they ought to be. They will be fully illustrated throughout by references to the teaching of all the subjects of the ordinary Course in English, Continental, and American schools.

SYLLABUS.

I. (Sept. 27.) *The Ideal Teacher.*—Advantages and dangers of dealing with such subjects: the old and the new ideals: distinction between ideal teacher and ideal human being: physical, mental, and social qualities of the ideal teacher: hero-worship in school: the resolution of the ideal into the possible and actual: the compensations of common-placeness: the range of responsibility for the effects of personality and its trappings.

II. (Oct. 4.) *The Ideal Pupil and his Opposite.*—Demands of Plato, Quintilian, Ascham, and the rest: analysis of qualities of ideal pupil: standard by which the ideal is to be tested: the teacher's fallacy: the actual pupil: analysis of his defects: manipulation of his weaknesses: the importance of the common-place pupil: meaning of individuality, personality, and character: teacher's right to attempt to modify character at all.

III. (Oct. 11.) *The Class.*—Collective *versus* individual instruction: the team an educational collective unit: the class a teaching collective unit: the class essentially a compromise: advantages of collective presentation: disintegration and integration of the class spirit: Dr. Montessori's claim to have rung the death knell of class teaching: size of classes: individual taught through the class and the class through the individual: individualistic group teaching.

IV. (Oct. 18.) *Discipline.*—Popular misunderstandings about nature of discipline: the old discipline and the new: place of the "drill" principle: mental discipline: free discipline: minimum amount of restraint essential to satisfactory discipline: effect of school organization on discipline: self-realization and self-expression: freedom *versus* caprice: internal and external control: the anarchic school and the school republic.

V. (Oct. 25.) *The New Teaching.*—Fashionable use of the term *new*: invariableness underlying change: changes during life of a teacher: characteristics of the new teaching: self-consciousness: paidocentricism: respect for pupils' individuality: responsibility thrown on pupils: opposition to bookishness: use of interest and anisic attention: emphasis on disintegration-beat in class work: bias towards vocationalism tempered by belief in good all-round education.

VI. (Nov. 8.) *Textbooks and their Manipulation.*—Two kinds of textbooks, logical and psychological: textbook as authority: as an aid: reaction against textbooks: development of lecture method: textbooks partly superseded by pupils' notebooks: dangers and advantages of this plan: effect of multifoldings: probable development of textbooks: skeletal forms: relation of "subject" associations to new textbooks: standard type to suit different needs.

VII. (Nov. 15.) *Teaching how to Study.*—Effect of paidocentricism on the work of the pupil: method of learning naturally correlated with the method of teaching: pupils made conscious of their methods: books by F. M. McMurry and Dr. Lida Earhart: Rev. John Todd and William Cobbett applied to earlier stages of study: need for freedom in applying principles: varying methods according to temperament: residuum of unalterable principles: ultimate responsibility of the pupil.

VIII. (Nov. 22.) *Scales for Testing School Work.*—General demand for objective standards: Binet's Ready Reckoner of Instruction and Metric Scale of Intelligence: development of the idea so as to include many of the school subjects: work of Thorndyke, Ayres, and Curtis: Scales in arithmetic, handwriting, reading, spelling, drawing, English composition, language ability: difficulty in applying the scales: steady advance towards a workable scale.

IX. (Nov. 29.) *The School and the Home.*—Effect of the new teaching on home lessons: changing attitude of parents towards teachers: contrast with German system: nature and limits of parental co-operation: direct instruction *versus* atmosphere: the Gary plan and its reaction on relations with home: possibility of developments of co-operative cookery: night and day use of school buildings and its results: teachers as social workers.

X. (Dec. 6.) *The Teacher and his many Masters.*—Politics architectonic to education: schoolmaster must take his orders from the statesman: hierarchy of authorities representing the statesman: teacher's attitude to all these authorities: limits of his freedom, yet freedom within these limits: the official mind, its limitations and manipulation: teacher as expert must be allowed free scope to carry out the general instructions he receives: how to satisfy the requirements of authorities and yet retain substantial independence.

XI. (Dec. 13.) *The Educational Engineer.*—The principal of scientific management applied to teaching: introduction of a theoretical-practical man between the pure psychologist and the "direct" teacher: functions of the American school superintendent, and the English Director of Education, Director of Studies, and Head Master: aim and sphere of the "direct" teacher: how to minimize the evil effects of expert interference from without.

XII. (Dec. 20.) *The Literature of Education.*—Bad repute of teachers as readers: the inarticulate profession: need for general as well as special reading: the profession as raw material for literature: the literature that deals with the subject matter and with methods: the political literature of education: the "Curse of Education" type: the literature of principles: need for guidance in selection: periodical literature: need for keeping up to date, and how to do it.

FEEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

\*.\* Members of the College have free admission to the Course.

*History's Background.* Book II: *The Discovery of the Americas and the Growth of the British Empire.* By J. S. Townsend and T. Franklin. (1s. 6d. net. Johnston.)

The aim of this series of books is to provide a companion reader to the history and geography textbooks. It is intended for upper classes in elementary schools and lower forms in secondary schools. This book deals with the opening up of the oceans in the fifteenth and sixteenth centuries, with the Americas during the seventeenth and eighteenth centuries, and with the industrial revolution in the nineteenth century. There are numerous maps.

*The Advanced Atlas of Physical and Political Geography.* By J. G. Bartholomew. (8s. 6d. net. Oxford University Press.)  
A new series of maps, specially designed for schools, colleges, and private students. There are ninety-six maps and a very full index. The maps are very clear—remarkable value for the price.

#### MATHEMATICS.

*Fermat's Last Theorem.* By M. Cashmore. (G. Bell.)

In a little book which will certainly be studied with the greatest interest by all who devote serious attention to the theory of numbers, the author claims that he has produced a *rigid* proof on elementary lines of Fermat's celebrated "Last Theorem." When we consider that, since the theorem was first enunciated, mathematicians of the calibre of Euler, Lejeune Dirichlet, and Kummer have expended with but imperfect results both time and labour in connexion with the subject, it will be admitted that it would be taking a bold step to pronounce as to the validity of any attempt at a general proof of the theorem in question, without submitting the proposed demonstration to the closest examination. It is hoped and believed, however, by the present writer that the requisite critical investigation of the brief text of this small volume will be supplied by those amply qualified to undertake it, and, if the demonstration stand the test successfully, Mr. Cashmore will deservedly reap the acknowledgment due to his very noteworthy achievement. The author combines with the main subject of his work a discussion on tests for primes and recurring decimals.

*Longmans' Explicit Arithmetics for Girls.* Teacher's Series.

Book VII: For Standards VII and VIII. (1s. 6d.)

The exercises afford opportunity for the revision of commercial arithmetic, and give a large number of examples bearing upon domestic work and other occupations in which it is likely that girls may be engaged.

*Revision Papers in Arithmetic.* By Charles Pendlebury. (1s. Bell.)

These papers are designed for candidates preparing for the Oxford and Cambridge Local Examinations and County Council examinations for scholarships. There are two hundred tests, and the answers are given on perforated leaves.

*The Combinations of Observations.* By David Brunt. (8s. net. Cambridge University Press.)

The aim of this book is to give an account of the method of least squares.

*Optical Theories.* Based on Lectures delivered before the Calcutta University. By D. N. Mallik. (7s. 6d. net. Cambridge University Press.)

Prof. Mallik traces the development of optical theories from the earliest times to the present day. He describes how we have been led up to the present position, and what that position really is.

*Elementary Mathematics in Girls' Schools.* Report of the Girls' Schools Committee of the Mathematical Association. (1s. net. Bell.)

This pamphlet is a carefully prepared syllabus of the arithmetic, algebra, and geometry that can be attempted in girls' schools. It has been worked out by a number of mathematical mistresses in schools of repute.

#### STORY BOOKS.

*Baker Secundus, and Some Other Fellows.* By W. E. Cule. (1s. 6d. net. Office of *Boy's Own Paper*.)

For five evenings a group of boys from different schools, who are brought together for a County Scholarship examination, sit in the school hall and tell stories of their school life. The stories are both grave and gay, and all go with a swing.

*Winning the Prize.* By Amy Whipple. (1s. 6d. net. Religious Tract Society.)

The Floyd children are left to themselves for a time; both father and mother are away. Uncle Dick comes to look after them. With the help of their neighbours they finally decide to spend their leisure in growing vegetables for the hospital. Many

exciting adventures result from their apparently harmless occupation.

*A Year of Adventure.* By A. O. Charles. (1s. 6d. net. Religious Tract Society.)

The unexpected return of a missionary uncle from Canada brings to the Lewis family the opportunity of a year's adventure. Under the uncle's guidance the remaining time in a suburb of Birmingham held its share of excitement. A move to Cornwall, and later to Sweden, gives the author many opportunities of telling a good story.

*Boycotted, and other Stories.* By Talbot Baines Reed. (1s. 6d. net. Office of *Boy's Own Paper*.)

Mr. Reed's stories are well liked by boys and well deserve their reputation. The present collection is varied; there are fifteen stories and all form good reading.

*The Stolen Grand Lama.* An English Boy's Adventures in Wild Tibet. By J. Claverdon Wood. (5s. net. Office of *Boy's Own Paper*.)

The inhabitants of Tibet are a wild and, judged by European standards, lawless race. Their religion, culminating in the worship of the Grand Lama, is full of mystery. The story tells how an English child becomes the Grand Lama. There are numerous good illustrations. A thrilling story for boys of about twelve to fourteen years of age.

*Wonder Tales from Scottish Myth and Legend.* By Donald A. Mackenzie. Illustrations by John Duncan. (6s. net. Blackie.)

Mr. Mackenzie relates these old legends in a marvellously simple and sympathetic style. The legends spring from the soil and the changing seasons observed by people with genuine poetic instinct. The illustrations are full of grace.

*Mackay of the Great Lake.* By C. E. Padwick. Illustrations in colour, maps, and pictures. (3s. net. Milford.)

This is an account of the life and work of the well known missionary in Uganda. It is written in a style calculated to appeal to boy scouts, and is an interesting story of the early British attempts to bring civilization to the shores of Lake Victoria Nyanza. Mackay was a trained engineer and brought the first steamer to the Lake.

*The Book of the Happy Warrior.* By Henry Newbolt. (6s. net. Longmans.)

In this volume Sir Henry Newbolt retells old stories of chivalry that are not easily accessible in a form to be read by boys. Roland, Richard Cœur de Lion, St. Louis, King of France, Robin Hood, Bertrand du Guesclin and the Black Prince, and the Chevalier de Bayard are among the heroes whose stories are told. There are eight coloured plates and a number of other illustrations by Henry J. Ford.

*Hill of Broom: A Guernsey Mystery.* By E. E. Cowper. With four illustrations in colour, by Elizabeth Earnshaw. (3s. 6d. Cassell.)

A good story of an English girl who takes a post in Guernsey in answer to an advertisement, and there finds a state of affairs that causes her some anxiety and gives the reader some delight. The mystery concerns a soldier suffering from shell shock who has deserted; it appears somewhat thin, when explained, to account for the thrills in the book, but the reader is carried on with interest amongst the natives of the island and the English investigators who are determined to discover the reasons for the queer happenings that are narrated.

*My Book of Best Stories from History.* Selected and retold by Hazel Phillips Hanshaw. Twelve illustrations in colour by A. C. Michael. (6s. net. Cassell.)

A handsome volume with impressive pictures. The type is large, and the style would make an appeal to the young reader who has perhaps been somewhat bored by his history lessons and who will be surprised to find that true stories of heroes of the past can provide fascinating reading.

*The British Girl's Annual.* Compiled by the Editor of *Little Folks*. (5s. net. Cassell.)

This volume is no less interesting than its predecessors. It contains a number of exciting stories by between twenty and thirty well-known writers, in addition to a few poems and articles. There are numerous illustrations. In bulk and style it is more than usual value for the money.

*Cassell's Children's Annual.* (3s. 6d. net. Cassell.)

A very large book with pictures on every page, many in colour, and printed in type that can be read easily by little ones. The stories are charming; the book will be welcomed in the nursery.

**DUSTLESS and HYGIENIC SCHOOLS**

On all School, Laboratory, Library, &amp;c., Floors and Linoleums of every description

**USE FLORIGENE** (Regd.)**DURING EACH VACATION for Best Results.****(BRITISH MADE.)**

It is **IMPORTANT** to **NOTE** that **ONE APPLICATION** of "Florigene" **ALLAYS** the **DUST** and **DIRT** for **2 to 12 MONTHS**, according to traffic, not only during each Sweeping (without sprinkling of any kind) but also throughout all the intervening periods— which is of greater hygienic importance. "Florigene" is also easily and quickly applied, and saves time and labour.

**These sanitary, labour-saving, and economic advantages are NOT attained by sweeping-powders or any mechanical or other method.**

## 450 MEDALS & PRIZES !!

# STUDENT'S ELEMENTARY BOOK-KEEPING

By ARTHUR FIELDHOUSE, Accountant,  
66 West Parade, Huddersfield,

who will forward copy Index and Specimen Pages on receipt of Post Card addressed to Box A 27, Huddersfield.

364 Pages. 21st Edition. Post Free, 2s.  
100 Exercises. 350 Questions.  
Teacher's Specimen Copy, from Author only, 1s. 4d.

The ONLY TEXTBOOK to which there is a FULL KEY.

While this textbook more than covers all Elementary Examinations in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the Society of Arts, West Riding County Council, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.

The Exercises and the principles introduced therein are so carefully graded in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The Questions will be found very useful for testing the student's knowledge at each stage of his work. Examination Papers of the Society of Arts, the W.R.C.C., and College of Preceptors are included.

London: SIMPKIN, MARSHALL, HAMILTON, KENT & Co., Ltd.

## THE STUDENT'S BUSINESS METHODS and COMMERCIAL CORRESPONDENCE.

By ARTHUR FIELDHOUSE, Accountant,  
66 West Parade, Huddersfield,

who will forward Specimen Pages and Index on receipt of Post Card addressed to P.O. Box A 27, Huddersfield.

Eighth Edition. 380 Pages.  
2s. 6d. Post Free.

80 TEST and EXAMINATION PAPERS,  
containing 1,300 QUESTIONS.

This is the only practical, up-to-date book on Commercial Correspondence and Office Work, and is characterized by the qualities that have made the author's other textbooks so popular. The lessons are well graduated, and the teacher is saved the drudgery of preparing Test Papers, one of which follows every chapter, in addition to numerous Examination Papers. PRACTICAL Work is provided in the Series of Business Transactions included in some of the Test Papers. It is the only Complete Guide, covering all the Elementary Examinations. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. Efficiency should be the first consideration. It is an excellent Handbook for the Junior in the Office. Teacher's Specimen, from Author only, 1s. 7d. post free.

London: SIMPKIN, MARSHALL, HAMILTON, KENT & Co., Ltd.

## THE School World.

A MONTHLY MAGAZINE OF EDUCATIONAL  
WORK AND PROGRESS.

THE aim of "The School World" is to provide teachers with information of practical and permanent value. To this end all important changes and developments affecting education are dealt with by leading authorities and experienced teachers.

The magazine is indispensable to all educational workers who desire to keep in touch with modern methods of education.

*This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.*

**A.—EMPLOYMENT DEPARTMENT.**

**(i) ASSISTANT MASTERS & TUTORS.**

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

**(ii) ASSISTANT MISTRESSES.**

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

**(iii) LADY MATRONS AND HOUSE-KEEPERS.**

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

*No charge is made to Purchasers.*

*All communications and inquiries are treated in the strictest confidence.*

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

*Full particulars will be forwarded on application.*

Announcement List and Catalogues sent on application.

### JUNIOR ENGLISH

By F. J. RAHTZ, M.A., B.Sc., Senior Lecturer at Merchant Venturers' Technical College, Bristol. 14th Edition. Crown 8vo. 1s. 9d.

### HIGHER ENGLISH :

By F. J. RAHTZ, M.A., B.Sc. 11th Edition. Crown 8vo. 4s.

### A CLASS-BOOK OF DICTATION PASSAGES

Selected by Canon W. WILLIAMSON, B.A. 20th Edition. Crown 8vo. 1s. 9d. [Junior School Books.]

### TOMMY SMITH'S ANIMALS

By EDMUND SELOUS. With 8 Illustrations by G. W. ORD. 15th Edition. Fcap. 8vo. 1s. 9d.

### TOMMY SMITH'S OTHER ANIMALS

By EDMUND SELOUS. With 12 Illustrations by AUGUSTA GUEST. 7th Edition. Fcap. 8vo. 1s. 9d.

### TOMMY SMITH AT THE ZOO

By EDMUND SELOUS. With 8 Illustrations. Fcap. 8vo. 1s. 9d.

### L'HISTOIRE D'UNE TULIPE

By ALEXANDRE DUMAS. Adapted from "La Tulipe Noire," by T. R. N. CROFTS, M.A. 4th Edition. Fcap. 8vo. 1s. 3d.

### A JUNIOR HISTORY OF GREAT BRITAIN

By E. M. WILMOT-BUXTON, F.R.Hist.S. 3rd Edition. Crown 8vo. 2s. 6d.

### THE REMAKING OF MODERN EUROPE:

From the Outbreak of the French Revolution to the Treaty of Berlin, 1789 to 1878. By J. A. R. MARRIOTT, M.A. With 10 Maps. 9th Edition. Crown 8vo. 3s.

### MAKERS OF EUROPE

Outlines of European History for the Middle Forms of Schools. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 12 Maps. 15th Edition. Crown 8vo. 4s.

### EASY EXERCISES IN ARITHMETIC

Containing 5,000 Examples. By W. S. BEARD. 9th Edition. Fcap. 8vo. 1s. 3d. With Answers. 1s. 6d. [Beginner's Books.]

### A TEXTBOOK OF INORGANIC CHEMISTRY

By G. SENTER, D.Sc., Ph.D., Lecturer at Birkbeck College. Author of "Outlines of Physical Chemistry." With many Diagrams. 3rd Edition. Crown 8vo. 7s. 6d. [Textbooks of Science.]

### THE COMPLETE SCHOOL CHEMISTRY

By F. M. OLDHAM, M.A., Senior Chemistry Master at Dulwich College. With 125 Illustrations. 11th Edition. Crown 8vo. 5s. [Textbooks of Science.]

### ELEMENTARY EXPERIMENTAL SCIENCE

**PHYSICS**, by W. T. CLOUGH, A.R.C.S., Head of the Physics and Electrical Engineering Department, East Ham Technical College; **CHEMISTRY**, by A. E. DRUNSTAN, D.Sc. With 2 Plates and 154 Diagrams. 16th Edition. Crown 8vo. 3s. [Junior School Books.]

### EXAMPLES IN PHYSICS

By C. E. JACKSON, M.A. 3rd Edition. Crown 8vo. 3s. [Textbooks of Science.]

### ELECTRIC LIGHT AND POWER

By F. E. BROOKS, B.Sc. (Lond.), Head of the Department of Physics and Electrical Engineering, Leicester Municipal Technical School, and W. H. N. JAMES, A.R.C.S., A.M.I.E.E., Lecturer in Electrical Engineering, Municipal School of Technology, Manchester. With 17 Plates and 230 Illustrations. 4th Edition. Crown 8vo. 5s. [Textbooks of Technology.]

**METHUEN & CO., Ltd.,**  
36 Essex Street, Strand, W.C. 2.

## BLACKIE'S LIST.

### THE GROUNDWORK OF BRITISH HISTORY.

By **GEORGE TOWNSEND WARNER**, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c., and **C. H. K. MARTEN**, M.A., Balliol College, Oxford; Assistant Master at Eton College. With Maps, Time Charts, and Full Index. 764 pp., super-crown 8vo, 6s. net. Also in Two Parts 3s. 6d. net each. Also issued in Three Sections, 2s. 6d. net each.

### TILLAGE, TRADE, AND INVENTION.

An Outline of Industrial History.

By **GEORGE TOWNSEND WARNER**, M.A. Crown 8vo, cloth 2s. net.

### ON THE WRITING OF ENGLISH.

By **GEORGE TOWNSEND WARNER**. Crown 8vo. Cloth extra. Price 3s. 6d. net.

### EUROPE SINCE NAPOLEON.

(1815-1910.) By **ELIZABETH LEVETT**, Tutor in Modern History, St. Hilda's Hall, Oxford. With 10 Maps (2 in colour). Cloth boards. Price 3s. 6d. net.

### THE MAIN STREAM OF EUROPEAN HISTORY.

By the **Rev. FREDERICK HARRISON**, M.A., Senior History Master, Rutherford College, Newcastle-on-Tyne. Crown 8vo, cloth. Price 1s. 6d.

Just Published.

### A SCHOOL RUSSIAN GRAMMAR.

By **E. G. UNDERWOOD**, Christ Church, Oxford; Universities of Paris, Lille, and Bonn; Assistant Master at Eton. Large 8vo. Price 2s. 6d. net.

### A PROGRESSIVE RUSSIAN COURSE.

By **P. M. SMIRNOFF**, Member of the "Literary Society of Russia," Teacher of Russian in the Greenock Technical School, &c. Large Crown 8vo. Price 3s. 6d. net.

### SELECTIONS FROM ITALIAN PROSE WRITERS.

With Critical Introductions. By **ERNESTO GRILLO**, M.A., LL.D., D.C.L. 7s. 6d. net.

### SELECTIONS FROM THE ITALIAN POETS.

With Critical Introductions. By **ERNESTO GRILLO**, M.A., LL.D., D.C.L. 7s. 6d. net.

### A SKELETON SPANISH GRAMMAR.

By **E. ALLISON PEERS**, M.A. (Camb. and Lond.), Modern Language Master at Felsted School. Price 2s. 6d. net.

### A JUNIOR FRENCH COURSE.

First Year.

By **E. J. A. GROVES**, Lic. ès L. (Senior French Master Bradford Grammar School). Fully Illustrated. Cloth extra. Price 2s. 6d. net.

### BLACKIE'S LONGER FRENCH TEXTS.

From Modern French Literature. Printed in large, clear type, with brief Notes, Exercises, Phrase-list, and Vocabulary. Fcap. 8vo. 9d. each.

### BLACKIE'S LITTLE FRENCH CLASSICS.

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo, 5d. each.

### LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By **E. MAGEE**, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other Illustrations. Fcap. 4to. 1s. 9d.

### LE LIVRE BLEU.

A Second Book of French in Coloured Pictures. By **E. MAGEE**. With sixteen full-page Coloured Pictures and many other Illustrations. 2s.

### COURS DE FRANÇAIS, d'après les Textes.

By **M. ANCEAU** and **E. MAGEE**, Edgbaston High School for Girls, Birmingham. Cloth boards, 1s. 6d.

**BLACKIE & SON, Ltd.,** 50 Old Bailey, London.

## The Educational Times.

Until further notice, "The Educational Times" will be issued four times a year—on the 1st of February, May, August, and November. The next issue will appear on May 1st.

Communications intended for the Editor should be addressed to Ulverscroft, High Wycombe.

### EDUCATION IN DANGER.

In the year that is past the subject of Education has taken a more prominent position in newspaper discussion than has been the case previously. For the first time in our history a Minister of Education has journeyed from centre to centre delivering addresses with the object of rousing the people to a sense of the need for greater provision of educational opportunity. Proposals have been put forward that State supervision should stretch from infancy to manhood, from nursery schools to the age of eighteen years.

Education, conceived and carried out in the right spirit, leads to the Kingdom of God, the seeking of which is the first aim of life; other things are secondary in importance. The sincere and direct utterances of Mr. Fisher keep this point of view to the front: that education is an aim in itself, that children and adolescents need protection from commercial exploitation while they are developing and practising their powers, while they are finding out what life is and how to live it. Before the war there were many efforts made to break away from the commercial values that had been given to education. Many people felt that commercial values were not the only ones that mattered. The phrase "get on," which should mean "make progress towards a desirable goal," had come to signify "grow richer in money," thereby limiting its meaning to one

aspect of life only and assuming that material wealth was the one desirable goal. Since the war the protest against this mistaken value in education has grown louder. But it is still the opposition based on this mistaken attitude that Mr. Fisher has to meet in his attempts to improve the opportunities for education. One definite point may be taken as typifying the attitude of mind. It is said that if young men and young women are required to attend day classes until they have reached the age of eighteen, industry will be dislocated, wages lowered, and working-class homes made poorer; that, in short, there will be no commercial benefit to counterbalance the inconvenience.

This point of view needs combating with all the force that can be brought to bear. Very courageously and very convincingly has Sir John McClure raised his voice at recent meetings in London. It is the spirit underlying the teaching in schools that matters. If, with existing economic conditions, a boy, become man, grows rich, partly as a result of his education, there is nothing to say; but if the feeling of the country tries to force upon schools the principle that education is given with the aim of gaining commercial wealth, then arises the need for protest.

After three and a half years of war many people have learnt to do without things they used to think necessary. If one box of matches used with care will suffice where a dozen used to be squandered, why not continue to use fewer matches and let the time saved in labour be given to education and recreation? The same principle applies to most commodities. But during the war other people have become richer than before, and with the sudden accession of wealth it is hard not to over-estimate its value.

Another danger to education that the year just past has brought prominently forward is the danger of over-centralization. A strong man who feels that he can do things well is naturally impatient of inefficiency in others. Mr. Fisher has shown an inclination to fall into this snare. The Board of Education contains, he seems to say, good men and true who know what education wants; let the control of the Board therefore become more widespread. If in his own mind

Mr. Fisher argues in this sense, he forgets two things that matter. In the first place, Central Boards, though these officers be good men and true, have a tendency to become rigid and inhuman when invested with complete power and removed from personal contact with those they govern. In the second place—and this is more important than the other—central government, by removing from a locality the power of initiative and the sense of responsibility, tends to destroy interest in and take away life from the institution that is created. If the inhabitants of an area once get into the habit of looking entirely to the Government for the supply of education, it is likely that they will soon grow to care less about education.

The discussions of the year have brought to light another danger, which is to many people unexpected. The Workers' Education Association is a large body with influence spreading into all large centres of population. It is in the main a genuine movement, at the same time it is influenced to some extent by well-meaning doctrinaires who are not workmen, but who become members "in order to encourage the others." This is a hateful phrase, and its use shows an ineffective attitude of mind. Under these circumstances it is not possible to feel sure that the W.E.A. really represents the industrial workers of the country. The disquieting point is that this Association seems to view with suspicion the introduction into schools of anything that is not book-learning. At a time when even the most backward school has realized that development and training of muscles must go on *pari passu* with the development of intellectual powers, a reactionary tendency is trying to make itself felt, which would limit school education to learning from the printed book.

This year schools will have to fight against these three tendencies. They must insist upon their ideals; not allowing it to be assumed that they have no ideals because of pusillanimity or delicacy in expressing them. The commercial view that education is worth what it will fetch in salary must be opposed. Secondly, schools must protest against over-control from outside. The pawn cannot be expected to feel much interest in the game. And, thirdly, in the matter of school work, those activities must be chosen that best enable the child to practise his powers and find his personality.

## NOTES.

Mr. FISHER has introduced his new Bill under pressure of Parliamentary time which prevented a full debate on the first reading. As was expected, the main educational lines of the previous Bill are maintained. On these there was almost universal approval. Adverse criticism was directed principally towards the administrative clauses, some of which appeared to give undue power to the Board of Education. These clauses have been either omitted or modified in the

light of the criticism of the Local Authorities. The proposal that Provincial Councils should be formed has been omitted. It was Lord Haldane's pet scheme, and it had something in its favour, if only the country were educationally virginal and it were possible to place a dozen Universities equidistant from one another. But the Local Education Offices and the Universities are already established, and it would have been an error to endeavour to regroup them. The Bill, as it now stands, has strong backing both in Parliament and in the country, and it should before long become law.

THE Board have issued an explanatory circular on the subject of Advanced Courses. Firmly, but courteously, they maintain their decision that for the present

there shall be three such courses, and three only. More than one group of "experts" from whom the Board invite criticism have urged the importance of recognizing English as one of the principal languages. The answer of the Board is to the effect that it is well to try the three courses laid down and then later on to make modifications in the light of the experience gained. There is much to be urged in favour of the Board's point of view. In recent years many fresh subjects suitable to school study have been introduced. For all and each it is easy to find weighty reasons for inclusion in the time-table. But, speaking generally, the result has been to lessen the thoroughness of school studies. There are schools in which, in addition to the two or three main subjects, some half-dozen subsidiary subjects receive two half-hours or one hour a week. In some schools so many principal subjects are admitted that no thorough study of any one is possible; education becomes scrappy, confused, and ineffective, so far as intellectual study is concerned.

THE action of the Board may have valuable results if it succeeds in impressing upon schools the value of a well-planned course of study, consistently and thoroughly carried out. Things have reached a condition in which heads of schools must make up their minds to face criticism for the omission of subjects. A good case can be made out for the inclusion of any given subject, but no case can be sustained for the inclusion of all the many subjects in the time-table of one pupil. It is far better to acquire the habit of steady mental work through the study of a few subjects thoroughly, than to flit gaily from one attractive occupation to another, resting nowhere long enough to make trial of the intellectual powers. A language carefully studied may quite likely lead to the study of another language later on. As things are, it is by no means uncommon to find a piece of composition written by a pupil of fifteen years containing words and constructions belonging to the English, Latin,

French and German languages. Thoroughness is an ideal from which we are declining, and which we need to re-approach. But thoroughness ought not to mean pedantry; rather a grasp of main principles than meticulous accuracy. The juvenile stitcher does not start by hemming a handkerchief.

THERE is one point in particular in which the Board's Circular gives a useful hint. Latin, we are told, has been offered by a very large number of schools as one of the two languages to be included in a Modern Subjects Course. "But," continues the Circular, "it has generally been assumed that it will be of the same kind as the Latin in a Classical Course, with the result that it is left unrelated to the other subjects. To secure this relation, stress should be laid on acquiring the power of reading Latin rather than on prose composition or minute grammatical work." The Board even go on to suggest that historical books in medieval and later Latin might be read. The classical teacher may perhaps be rather shocked at this licence to decline from classical models. But the Board have reason on their side. The teaching of Latin is often obscured by the study of small points of grammar, of delicate shades of meaning, and of all that is included in the term "scholarship," far beyond the powers of understanding or appreciation of the pupils at the time. A good deal of reading should be done before grammatical niceties are studied or composition attempted.

WHILE the Board of Education are insisting that an Advanced Course should consist of a definite group of subjects carefully related and thoroughly studied up to a high intellectual standard, there comes from another source a disquieting opposition to the inclusion in the school curriculum of the subjects generally known as "practical." Leaders of educational thought have succeeded in convincing every teacher that in the early stages of school life handwork of one kind or another must be introduced in the interest of the intellectual development of the child. At the same time there is a suspicion, not perhaps new and not perhaps growing in intensity, but certainly growing in violence of expression, that all handwork is designed to keep the children of the workers in their places and to prevent them from rising in the social scale. The suspicion, which is now being widely voiced, is to some extent justified by the frequent demand in the newspapers for more efficient workers in order that the country may hold its place in industrial competition with other nations. The feeling is provoked that all educational reform is to be effected in order that the capitalist may secure better tools to increase his wealth. So in all directions comes the demand that schools should teach book-learning only.

LEGISLATION is of little force if it does not express a prevailing feeling. Teachers know that the aim of teaching carpentry to boys of twelve is to develop the muscles of the hand and arm in order to set free the powers of the brain: carpentry is not taught in order to turn boys into carpenters. So it is with other manual subjects. Domestic subjects are taught in order that girls may understand and be interested in the housework that they may have either to do or to control, not in order to fit them for domestic service. Teachers who are themselves educated know the value of education and wish to give their pupils the best opportunities of self-development that are possible, without any direct consideration of their earning capacities or their value as money-making tools to the employers. Parents, especially if they have had little education themselves, are generally anxious that their children should enjoy what they have missed. But it seems to them that what they have missed is book-learning alone, and so it is for book-learning that they ask, not yet realizing that the training of muscle and brain are closely connected and need equal opportunities of development. It remains for teachers to make it clear on every suitable occasion that education is given in the interest of the individual child and not for the benefit of the capitalist.

THE Education Committee of the London County Council have included in their recent report a strong expression of opinion on the subject of the inspection of private schools in London. The report states that the improvement of education is considerably hampered by the fact that private schools are not under any kind of public inspection, so that the Local Authority has no means of knowing whether the children attending such schools are being efficiently educated. The Committee recommend the Council to approach the Board of Education with a view to securing that private schools should be registered and subject to inspection. It seems that the Council have no power under the Education Act of 1870 of inspecting any school where the fees exceed ninepence a week. When the fees are ninepence a week or less the Council have already the power to inspect, and towards the end of last year a number of summonses were issued on this subject. It was stated that the children attending the schools in question were deplorably ignorant, that there was no equipment, and that the premises were unsuitable. The magistrates gave the parents time to find an efficient private school. If that were not done he would order the attendance of the children at Council schools.

MR. H. DRUMMOND, of Hetton-le-Hole, sends us an interesting account of a successful experiment that has been made in the use of Simplified Spelling in the

*Simplified Spelling.*

Lyons infant school of that town. The Board of Education had sanctioned the experiment. The teachers report as follows: "The scheme drawn up was very simple: being, first, sounds, then syllable-building, word-building, sentences, and the first and second readers." The report goes on: "Sound charts were always in front of the children, who were practised in them for a few minutes each day. The charts were soon mastered, and then syllable and word-building were tried. At this stage the children showed great interest, and were anxious for books and stories. We took sentences and stories on the blackboard, following the Montessori principles. The children got on so quickly that we aspired to a First Reader, and they are doing splendidly at it." It is stated that the average age of the children is six years. It is claimed that in just over a month they have gone through the course which by the other method would have taken a year. The children showed great quickness and enjoyed the work. A few more experiments like this and prejudice may give way. Children, after learning to read on a phonetic system, can easily learn the orthodox spelling if it is necessary.

A CORRESPONDENT sends us a quotation from Henderson's "Life of Stonewall Jackson," and suggests that as "it is closely related to the ideals of *The Educational Times*, it might be used as a motto for the year 1918." This is the quotation: "It has been well said by a soldier of Napoleon, writing of the war in Spain, that neither the Government nor the Army are the true bulwarks against foreign aggression, but the national character." The statement is true, and may well be laid to heart. It is necessary at the same time to recollect that the nation is not an entity apart from the Government and the Army. Statesmen and soldiers display the national character like the rest of us. It is the national character that forms and inspires the Government; it is the national character that brings into existence and gives strength to the Army. Everything therefore that develops character is of prime importance, and teachers are not in danger of forgetting this. It is not the knowledge taught nor the skill acquired that matters most. The things that matter are access to and ability to appreciate lofty thoughts and noble ideals, the resolve to make the best of one's own powers, and the strength to carry such resolve into action.

COMPULSORY education up to the age of eighteen is rightly held by many people to involve a widespread waste of time, so long as the term "education" means in the future what it has meant in the past—that is, in the main, a literary education based on the printed word. It is certain that a large number of pupils over fourteen years of age will resent the compulsion, and will therefore make but little progress under tuition.

But, in addition to this class, there are many boys and girls who are unable to absorb too prolonged a dose of literary study. Mr. Fisher evidently has foreseen this, for he has spoken of the necessity of giving to every boy and girl as much education "as they can absorb." Prof. John Adams, in a recent number of *The Times Educational Supplement*, shows convincingly that there must be a lower as well as an upper limit. He concludes his article with these words: "Every boy and girl has, in fact, what may be called a coefficient of educational absorption. It is for the experimental educationists to determine this coefficient in each case, and for the Education Authorities to ease off their pressure as soon as the point of educational saturation has been reached, even though the liberation age of eighteen is far distant. We cannot make it too clear that this shortening of the span is to be determined in every case by the powers of the pupil, and not by the desires or needs of any outside persons—be they parents, employers, or Education Authorities.

In this, the fourth winter of war, teachers' conferences have been held with their usual vigour and success. It is well that it should be so. At a time when schools are feeling the loss of the younger masters, it is all the more necessary for the remainder to take counsel together and to renew their enthusiasm and faith by mutual discussion and comparison of ideals. At a time, too, when those who understand the value of education are trying to convert the nation to additional effort and additional expenditure in the cause of education, it is urgently necessary that teachers should take their stand upon public platforms and enunciate the truths that they have won. If the teachers were to show indifference, it could hardly be expected that "the man in the street" should be enthusiastic. Mr. Fisher needs support, and that support was shown from every quarter at the conferences. Another prevailing note of the speeches was the demand for greater unity. Unity in the teaching profession, the drawing together of primary, secondary, and tertiary teachers, union between schools and parents, union between teachers and pupils. The growing sense of community of aim must help to lessen artificial distinctions. The common aim is to give opportunities for the liberation of the personality of each individual within the limits, becoming fewer as democracy advances, that society finds it necessary from time to time to impose.

MR. FISHER'S address to the Teachers' Christian Union will have been listened to, or reports of it read, by almost every teacher in the land. The high note of spiritual endeavour which characterized the speech will awaken many an echo. But one of his remarks

will cause anxiety to many teachers who believe in the value of private initiative and freedom in education. Mr. Fisher looks forward to a time when all schools will regard themselves as members of a national system of education. It is an aspiration that comes quite naturally from the head of a Government department. But to many people the history of bureaucratic control of education has not encouraged the belief in its efficiency or its success. Great progress must come in the development of mankind before it will be safe to entrust the entire education of the country to a Department of State. The value of private schools is that they offer an opportunity to the educational pioneer to carry out reforms that would be discouraged by officials. When those reforms have been proved, then, quite naturally, the State adopts them. The Board of Education have done much and will do more, but the country is not yet prepared to leave educational provision entirely in their hands. Private schools certainly do form part of the provision of education for the nation; to bring them under the present rigid control of the Board would be a calamity.

SIR JOHN McCCLURE was very outspoken in some of his remarks at recent educational meetings. His utterances are especially valuable in the light of the suspicious attitude to which reference was made in a preceding note. The suspicion is that education is given in the interests of capitalists and that teachers and capitalists are in league for the purpose. Sir John characterized as horrible nightmare the idea that education meant making good workmen and so increasing the industrial output of the country. "Against that foul conspiracy," he said, "it is our duty to protest, not with our might alone, but with the whole spirit in which we conduct our education." It is not so many years ago that every paper printed extracts from consular reports complaining that England was losing her trade and calling upon schools to make education more practical—i.e. to fit boys more exactly for counting-house or workshop. This demand that infants should be taught a vocation is disastrous to true education. But the demand does not come from business men alone. Mr. Fisher humorously drew a picture of the tiny citizen, as the trade unions would like to see him, "instructed in the mysteries of industrial history, of strikes and lock-outs, sliding scales, and piece-rate arithmetic, so that he may be equipped for the rôle of Labour leader."

WE have spoken of the suspicious attitude that the manual workers maintain towards education as given in the schools of to-day. That we do not exaggerate the danger may be argued from an article in a recent number of *The Times Educational Supplement*, which supports strongly the view here taken. The writer says that a group of men in the Midlands were dis-

cussing physical drill and medical care as carried on in the elementary schools. They agreed that the drill was well done, but thought that the real reason for its introduction was a desire to keep the working classes from becoming too intellectual. The writer gives the following statement as a résumé of what the masses believe the classes to be thinking: "The lower classes are becoming too intellectual; they are able to think and to express their thoughts; they will not much longer tolerate suppression. This must be stopped, but in Britain a direct opposition is not advisable. A more subtle system of combating the evil is to be found by turning attention to the physical. Cultivate their bodies; let their minds take their chance; then there will be plenty of brawny toilers—inarticulate because incapable of thought." The Labour Party may in the near future control Parliament, but at present the masses feel that they are being exploited in the interests of the rich. Divisions of that character in a State constitute a real danger to solidarity.

THIS paper, in common with others in Great Britain, has received an urgent appeal on the subject of national religion. It is suggested that as the Churches "have failed through three years of war to make the people realize their religious and moral duties," the duty might be laid upon editors of "giving the manhood of the nation a call to get back to God." It is most unhappily true that the Churches exercise at present a waning influence upon the majority of men. Services seem unreal and artificial: they do not respond to the feeling of need. Sermons fail to impress, for the preachers seem to be aloof from life. Many people "get their religion" from newspapers. Cheap printing produced a revolution in the influence of the pulpit. We do not believe that the nation is less religious in spirit than it has been in any previous epoch of our country. We believe there is a deep and wide sense of the value of spiritual things, which would at once grow in expression if the religious bodies of the country could adapt their professions to the needs of to-day. It is not the place here to discuss the reasons why the organized exponents of the religion of the nation have drifted apart from so large a proportion of the individuals composing the nation. But, though it has happened so, we do not believe that it is the result of indifference to higher things.

THE Secondary Schools Association have issued a memorandum on the subject of the "Fisher Grants" which call for the careful consideration of all schools that are governed under a public scheme, but are not receiving Board of Education grants. The memorandum points out that such schools are now faced with the fact that the State secondary schools are so heavily subsidized out of the taxes that other secon-

dary schools, unless they have valuable foundations or receive incomes from boarders, can hardly continue to hold their own. If such schools are reduced by State action to an inferior position, "it will not only be bad for the schools, but bad for the education of the nation." The Association therefore urges joint action, with a view to bringing influence to bear upon Mr. Fisher to give grants to schools where denominational education is given. This plaint comes in support of the previous contention that it is not in the interests of the nation that all schools should be under State control. The schools that the Association have in mind are those whose instrument of government make it essential to appoint a head master of some religious denomination. The regulation that excludes such schools from participation in grants is older than Mr. Fisher's term of office. It seems an irony that at a time when everyone is calling out for more religion, schools that give definite religious teaching should be crushed out of existence.

THE College of Preceptors has suffered the loss of two members whose deaths have been recently reported. Mr. Frank Ritchie was an active member of Council for many years. Some account of his activities will be found upon another page. Dr. Butler was an Honorary Member of Council and held the office of Moderator in Classics since the year 1873. He was a man of quite extraordinary gifts. His position, first at Harrow and then at Cambridge, brought him in contact with large numbers of people. To all of them he was a real force. He possessed in a remarkable degree what may be called, for want of a better term, personality, and consequently his influence is felt principally by those who met him rather than by those who read his writings. Without any pose or conscious effort on his part the simple grandeur of his nature communicated itself to those around him and drew out in response the best of which they were capable.

It has been the custom of the College to publish extracts from examiners' reports for the information of teachers. Following this precedent, there will be found on the last page of the Regulations for the commercial examination certain hints in regard to handwriting. *Handwriting*, it is there pointed out, is a special kind of drawing. Large arm movements should be taught and practised before the small finger movements which we associate with the use of a pen. It is a matter of practising the muscles. It is claimed that when the muscles of the arm are properly trained there will be no such thing as writer's cramp. The children in a Montessori school are encouraged to trace with the finger the outline of large letters, holding their arms up without any support for the wrist. For those who would like fuller information on the subject, there is a useful pamphlet recently published by the Child

Study Society on "Manuscript Writing," which can be obtained from Messrs. Longmans, Green, & Co. for fourpence.

### THE BOOKS.

By Prof. JOHN ADAMS.

It is in "Dr. Syntax," I think, that we find the decisive lines,

The lib'ral callings, all agree,  
Are Physic, Law, Divinity.

Teaching finds no place in this established trinity, though Mr. Frank Roscoe holds out hopes that by and by we may come to be recognized as a real profession. At present he tells us that "Teaching as a Profession" is a phrase that "is prophetic rather than descriptive." He admits that it is difficult to define precisely the term "profession," but assumes that its characteristics include "a body of scientific principles as the foundation of the work, and the exercise of some measure of control by the profession itself in regard to the qualifications of those who seek to enter its ranks." Leaving the second of these in the capable hands of the Secretary of the Teachers Registration Council, it is to the first that I want to draw the reader's attention.

In respect of this body of scientific principles how do we stand compared with the three orthodox learned professions? There is a phrase common on the lips of doctors and lawyers, and heard sometimes, though less often, among theologians. This is "the books." When discussing a case the doctor is fond of mentioning what "the books" have to say on the subject. On a knotty point the lawyer makes great case of "the books"—selecting, of course, the most favourable passages from what they have to say. When a difficult point of exegesis arises, the theologian may spend a good deal of time in expounding what "the books" contain on the issue. Even the layman has a certain share in "the books." It warms the heart of the experienced patient—amateur, as he so often is, of the characteristics of specialists—to be assured by his doctor of a place in "the books." What, then, are these mysterious books, and why do we teachers not also invoke them?

It is not that we have been altogether neglected in the matter of a technical literature. We, too, have our professional books. Not so many of them, of course, as the doctors, nor so abstruse as those of the theologians, nor so profitably ambiguous as those in which the lawyers put their trust: but books all the same. Some of them belong to us by good right. We can claim Comenius, Ascham, and Pestalozzi as exclusively as can the doctors Galen, Harvey, and Simpson. But others are claimed from what looks suspiciously like the desire for prestige. We have to justify our part and lot in them, and, truth to tell, we are not at all unwilling to embark upon a justificatory treatise. Professors of Education do not know whether to be more annoyed at or grateful to Plato and Aristotle, to take the two most flagrant examples. As soon as we hit upon some new aspect of our subject, some point that we fondly hope is entirely original, our first care is to turn to this troublesome pair to discover whether they have not, in some form or other, anticipated what we long to proclaim as our own. We find it disconcertingly common to discover that we have been forestalled, at any rate by implication. It is only natural, therefore, that we should acquire a certain dislike for these two anticipating persons. They are always getting in our way. On the other hand, they earn our gratitude when some other person publishes something that he thinks entirely new, and it is our turn to look into Plato and Aristotle and discover the exact place at which they have anticipated the optimistic investigator.

Too often do we who make our living by lecturing on "the books" prove ungrateful to those who supply us with materials for our disquisitions. What could be more thankless, for example, than the almost unqualified contempt with which it is now customary to treat Herbert Spencer's little book on "Education"? The contemptuous critics should not forget that their professional work is lightened by the material provided by the discredited philosopher. If we did not have the

opportunity of finding fault with him, we should have to undertake the much more arduous task of saying things for ourselves, and thus laying ourselves open to the criticism of others who would in their turn thus benefit at the expense of those they criticized.

It will be seen that we do have our books like the others, but they appear to be used mainly by those who make a profession of dealing with this literature. We do not find the ordinary teacher, as we find the ordinary doctor, referring to the books, and we very naturally want to know why. To be quite plain, it should be at once said that the great majority of teachers do not know of the existence of the books in question. Those who have gone through an ordinary training college for elementary teachers do know a certain group of books, some of them belonging to the genuine classics of the profession, but most of them being rather books of practical hints than treatises on principles. The newer type of secondary women teachers and the select few secondary men teachers who have deigned to prepare for their profession have, at any rate, some knowledge of the books. For the rest all is blank.

It is not impossible for teachers of ability to make out a sort of case for their neglect of their professional literature. But only the nobler sort among them take the trouble even to discuss the matter. The rest are complacent in their ignorance. They do not even know that here is a problem to be faced. They are joined to their idols like Ephraim, and perhaps we cannot do better than follow sacred writ, and let them alone.

The fighting sort decline to trouble with the books because they maintain that there is nothing new in them. They are old and quaint, and perhaps of some antiquarian interest, but they have nothing to say to an up-to-date teacher who has no special liking for antiquity. This is a perfectly intelligible attitude to adopt. Sturm, Comenius, and Pestalozzi are not the best sources for what are vulgarly called "tips" in teaching. But even for mere tips the contributions of the Jesuits are not without value, and no one can read *The Scholemaster* without getting some benefit even from the point of view of the most practical teacher. The editions of Hoole and Brinsley that Prof. Campagnac has presented to the profession have a distinct value to any schoolmaster with a spark of imagination or a glimmering of the meaning of the comparative method of studying a subject. Those who are willing to admit all this, get out of the responsibility of reading the books for themselves by the ingenious contention that all that is best in these old books has now been absorbed in the general body of knowledge available to the profession. Each of them has contributed its part to the mystery of our craft, and the whole is now common property. The same argument would exonerate us from reading Shakespeare and the Bible, but let it pass in virtue of its ingenuity and of the element of truth it embodies.

Let us carry it, however, to its legitimate conclusion. The argument implies that the teacher who uses it knows the present day body of scientific principles that lie behind his craft. Now, how does the modern teacher acquire his acquaintance with the principles of his profession? If he has made any systematic study he must have used books, at least the modern embodiments of the classics of our profession. To such a man the argument of absorption is valid. He has taken the proper means of seeing that the teaching of his predecessors has had a chance of reaching him. But the teacher who merely begins to teach and learns by trial and error, has little justification in maintaining that he is absorbing the results of the thinking of his predecessors. He carries on his work by the two dim lamps of tradition and personal opinion. Often by the grace of God he is able to avoid utter shipwreck, but for that he deserves no personal credit, and in the cases in which he fails he will assuredly not escape the censure of the just men who want to know whether he has taken all the proper precautions against failure.

Still another argument is brought against the books. We are told that they are so contradictory among themselves that no one can get any safe guidance from them. It has been said that there is no important statement made by any of the great writers on education that cannot be countered by its direct opposite in the writings of some other "great writer" on the subject. Here again it must be admitted that there is a certain justification in the argument. But the answer is twofold.

First, the teacher is urged to read the literature of his profession not merely to accept whatever he finds stated in the books, but to get at the various points of view and draw his own conclusion from what he reads. In the second place, even if lack of unanimity among the writers were a vital defect, we have now reached a stage at which there is a manifest approach towards harmony among writers on education. It is not, of course, maintained that we have got rid of difference of opinion in a subject that is notoriously controversial. But it is one thing to say that at the growing point of a subject there are violent disputes; it is another to say that it has not a body of recognized scientific principles on which there is general agreement. As I am fond of pointing out, within the past few years there have appeared no fewer than five books in English with precisely the same title, "Principles of Education." (Their authors are T. Raymont, E. N. Henderson, F. E. Bolton, W. C. Ruediger, and W. Franklin Jones.) If anyone cares to examine these five volumes he will find a great mass of matter on which they are all agreed. So clearly is this the case that reviewers sometimes find fault with the sameness of the views and facts presented. The truth is that we are all so busy debating certain controversial matters that we are apt to lose sight of the points on which we are agreed. On the other hand, only those who have to deal with young and inexperienced teachers can realize how much of this common body of accepted knowledge has to be actually communicated by direct instruction. It is not safe to assume that what is generally accepted is generally known. What to a well-read student of education is a commonplace is often trumpeted forth as something strikingly fresh and original by some one who, honestly enough, has made the discovery for himself, and is entitled to all the credit for a personal discovery, though also liable to the reproof of over-estimating the objective value of what he has found out, and to the less palatable reproof that he has wasted his time in discovering what he could have found out from the recorded experiences of his predecessors and colleagues. It is the duty of all of us to learn all that is at present known in our subject, in order that whatever talents we possess may be used in the discovery of things that are really new.

### SOME SCHOOLMASTERS—AND OTHERS.

WHEN we look back on the past and call up before our minds the men who taught us in our far-off boyhood, our feelings, like those of the inexperienced and inexpert speaker (the words are not necessarily synonymous) are mingled. Distance in time, as well as in space, may lend enchantment to the view, but we cannot forget all that we suffered in our younger days, and, while we think with gratitude and affection of some of our schoolmasters, we still are consumed with a burning desire to pour out the vials of our righteous indignation on others. Pierce as well as fond memory brings the light of other days around us. It is well for some of us that on the whole happy memories predominate over unhappy ones. Still the unhappy ones do exist, and no waters of Lethe can wash them away. Elia, looking back thirty-five years, named both his school and his masters. My school is just as famous as his, but courtesy and discretion make me choose concealment, though doubtless if my contemporaries read what I write they will recognize nicknames and initials.

One man above all others deserves grateful recognition, not for his scholastic attainments or intellectual brilliancy, but because, being the junior grammar master in the preparatory school, he took us in hand at the start, and for forty-three years he laid sound and solid foundations on which men more learned than he placed the superstructure of scholarship. I met Jimmy a few years ago, and by an effort of mental arithmetic I told him that at least four thousand boys must have passed through his hands. Each one of those four thousand learnt the use of pronouns by being told that if they did not exist he would have to write home after this manner: "Tommy's dear Mother,—Tommy has eaten Tommy's cake, and Tommy wants another." Jimmy, too, had "cakes" to give away, for he was firm as well as kind, but they were received, not with, but on the hand. I escaped these delicacies.

The master in the corresponding position in the writing school does not deserve to be mentioned in the same breath (or to have his name written with the same pen) with dear old Jimmy. *De mortuis nil nisi bonum*; but even epitaphs should recognize the majesty of truth. K— was a hypocrite and a savage, a blend of Squeers and Chadband. He was a pious man, but a kind-hearted gentlemanly infidel would have been an improvement on him. As a relief to his piety he had a way of letting himself go in anything but a pious manner, and he used to run amok with a cane, principally when we were practising hymns. I shall never forget one awful moment during a geography lesson when he bade me say "Dove and Derwent." I had not the remotest idea what these names represented, and I could not bring myself to utter words which had no meaning to me, so I kept silence; but it was almost pain and grief to me. He roared like a lion, and I thought my last hour had come. Happily his mood quickly changed, and my life was spared. When new boys came he asked them for contributions for the decoration of the classroom (and kept the money for himself). I gave a penny, and he said a halfpenny was enough, and he would give me the change later. That was thirty-four years ago, and 'later' has not yet come. He also promised me a shilling in lieu of a prize which was given to another boy. I wish I could have met him before he departed this life; I always longed to demand payment of this double debt, but my longing was never gratified. So strong was my dislike of him that during a tour down the Moselle many years after my schooldays I turned away from the hotel I had thought of staying at because it was marked "K—'s Hotel." *Belluarum hoc extremum* is a Ciceronian expression, and it exactly describes K.

As I turn my thoughts from this monster to the head of the preparatory school "a change comes o'er the spirit of my dream," and I am filled with gentleness and gratitude. He was a gentleman and a Christian. I see his firm, refined face, and I long to tell him how I remember with delight the sermons he preached in hall on Sunday afternoons; but, alas! J. T. has gone to his rest. I hope my loving appreciation may be known to him in Paradise. I have heard many preachers in my time, but no one I have ever heard or heard of knew as he knew the art of preaching to children. His text was always a story, generally some legend about a saint, and he made religion beautiful and real to us. May he rest in peace!

The school proper had many masters, and they presented every variety of character and capacity. Some were fitted for their position in both respects, some in one or the other, and some in neither. Some were born to be teachers, others had decidedly missed their vocation, and their mistake was our misfortune.

I shall never forget the hours spent in the drawing schools. We all went through that dreadful department, and thrice blessed was the boy who had artistic talent. For the rest of us it was Purgatory, and a useless Purgatory, too. To me it was an absolute waste of time, except that I learnt that "parallel lines as they go away from us vanish or get closer together." Years afterwards, when I took up the study of theology, I found this maxim of art an illuminating and helpful truth, the key to the solution of many problems. But I did not learn to draw, partly from dullness, partly from fear. The junior master was fierce enough (I am glad to say he shed his savageness in his later days), and his method of teaching was to knock you down with one hand and pick you up with the other. But the senior master was simply a wild beast. I used to look through the glass partition which separated the two rooms, and it was a case of *Christianos ad leones*. I thought that if I got under Billy my life would not be worth a minute's purchase, so I deliberately refrained from developing the tiny modicum of talent I possessed. Billy no longer lives. He was not hanged, but this was a miscarriage of justice.

Who can forget "Old Sarcaz"? He was head of the writing school, and taught us, among other subjects, history and geography. I learnt to value him more highly years after he ceased to stand to me in the relationship of master to pupil, and we became excellent friends. He was one of the old school, and would hardly rank as up to date to-day. I think he had not very much to teach us, but he knew something about teaching. He gained his nickname (unknown to

himself) by constantly telling us about bygone statesmen who had excelled in the art of sarcastic speech, and he used to warn us of the danger of using this talent overmuch. His geography lessons were rendered interesting by his reminiscences of walking tours over Scotch mountains. His history lessons consisted chiefly of imaginary conversations between Queen Anne and the Duchess of Marlborough. His leisure time was spent in advocating temperance, a cause which his vigour in old age splendidly advertised. If he was not a great scholar, he was a great disciplinarian. After his retirement he was asked by a Vicar to try to bring order into a hopelessly riotous Sunday school. He cheerfully undertook the task, and accomplished in five minutes what others had failed to do in five years. When he was eighty he paid a visit to an old colleague, who described him as "very young, very deaf—and not very dumb."

Who can ever forget the tall, black-bearded Henry? As long as we live, those of us who knew him will occasionally start and tremble as we hear his threat still echoing—"Now I've begun I'll go on"—and we feel again and again, as we take our pen into our hand, that we must produce "best small hand-writing, and plenty of it." His own "fist" was atrocious, but, like many other instructors, he could teach his pupils to do what he could not do himself. He was a worthy man, and when we were no longer his pupils we discovered his humanity and his humour.

Of course we learnt French, or, to speak more correctly, we attended French classes. In this respect our school was neither better nor worse than other schools, and perhaps the same might be said of the masters. One of them was a picture of dignity and deportment, and of course he had written a French grammar. His great desire was to die in harness, and he achieved it: but it was not very heavy harness. I think he really died from taking too great care of himself. Major Bagstock would have approved of him, for he was always well buttoned up, and, like old Weller, dressed up to the chin—cassock, overcoat, gown, and I think at times a shawl. He needed frequent nourishment, and nearly every afternoon went out for half an hour to refresh himself with chicken broth. But, if we learnt little from him, we knew he was a scholar and a gentleman, and he inspired respect.

When he died, the school bought a new broom, and for a short time we thought great things were going to happen, but it soon became clear that no great improvement had been made. Our new instructor came with a great reputation as a writer of most excellent books, but his ability was confined chiefly to his pen; his books are almost automatic machines for teaching French, and it would be difficult to improve upon them, but he did not teach as he wrote. He failed to create in us any love for his language or any particular ideas as to how we could acquire the use of it. And as a disciplinarian he was an utter absurdity. I am afraid the boys took advantage (to the disgust of the better-minded among us) of his weakness. He had become quite a Cockney in accent, although he was a Frenchman and remonstrated with us in that accent instead of taking severer and more sensible measures.—"I ain't a-going to have none of your nornsense"—"you're more offensive than ever this afternoon."

In the middle of this the head master would suddenly enter the room and ask—"Well, how are these boys getting on?" And the reply, which should have been, "They are veritable demons, please flog them all," invariably was, "Oh, ver' nice boys, ver' nice boys." When the Head had gone the Frenchman would say, "There now, after that, you ought to be good boys," but of course his consideration only produced contempt. He deserved better treatment, for he was humane, hard working, and perfectly refined. I have heard that in private life he was a most generous benefactor to those in need.

One of the masters combined the teaching of mathematics and morality. The former was orthodox, the latter scarcely so, his one rule being "You can cheat and lie as much as you like, so long as I don't find you out," and he had the greatest contempt for any boy who lied for ten minutes and then owned up. But he gave one piece of sound advice: "If you find a door open, leave it open; if you find it shut, leave it shut." Thus he taught us a wise plan for avoiding an unnecessary increase of responsibility.

No one who was a pupil of J. B. will ever forget him. He towered above the last mentioned master and all others of his

generation as a teacher of mathematics. He was a prince of teachers and should have been a teacher of princes—not on account of his manners, for he had none, but because of his methods. He could teach more in an hour than anyone else in a month. He had only one rule—"Get rid of all rules and use your common sense." He was always teaching us to open our eyes and work things out for ourselves. He used to talk to us on questions outside his proper subject and he gave us our first ideas on many matters of politics and economics. One of his pupils in his later days said to me—"J. B. is out of date, but J. B. out of date is better than most men up to date." He did not suffer from the vice of self-depreciation, but his strong self-confidence was justified by results.

Last, but not least, I must mention "The Head," and to write of him is more difficult than to write of all the others. It would be easy to be humorous, but it would be almost irreverent. If I were asked, "What do you owe to him?" my reply would be, "What do I *not* owe to him?" It is many years since I sat in his classroom, but he is still teaching me. I think of him daily, and as I grow in years I grow in gratitude. Not that we loved him at the time, for he was not the kind of man to draw out our affection when we were his pupils; he was rather too much of the schoolmaster for that; but afterwards we discovered what he had done for us and we longed to thank him. There was no nonsense about him and he inspired everyone with a wholesome fear that made discipline a matter of course. He had no commanding presence, but his presence was itself a command; and it produced order without the uttering of a single word. Now and then he was playful in speech and he would appreciate our sallies of wit, but it was never safe to reckon on amusing him. He had a caustic tongue and he could make a boy feel exquisitely uncomfortable. But, beneath his austerity, there was a kind heart and he loved justice and hated iniquity. If we sometimes thought him a beast, we discovered in after years that "The Beast had become a Beatitude."

No one could teach as he taught, and no other teaching has survived with me as his has done. He was never weary of making us read Cicero over and over again till we had caught the rhythm and had learnt to see its charm. He revealed to us the beauty of the Prayer Book language. He gave us the most splendid grounding in the Greek Testament that any schoolboys ever received, so much so that every page of it reminds me of him while I have forgotten the instruction I received later from an eminent theological coach who is now a Bishop. One of his greatest services was to make us familiar with Bengel's delightful epigrams; he seemed to have them all on the tip of his tongue. His sermons, like all his work, bore the mark of careful preparation, and I look back upon them as the first lessons I received in the art of preaching; there was not one unnecessary word in them, and each point led logically to the next till the climax was reached, and the climax was never spoilt by the fatal error of a fresh start. There are some who could speak of his wonderful skill and tenderness in ministering to dying boys; I knew him only as one who taught us how to live.

It is difficult to bring recollections of schooldays to a close, but to be garrulous is more pardonable than to be ungrateful. To offer a tribute of thankful recognition is both a duty and a joy.

W. C. B.

## WHAT IS WRONG WITH EDUCATION ?

By A TEACHER.

"Come out here, Tommy Jones!"

How often in each day does the harassed teacher have to say that! Poor man (or more generally woman), his is a hard life—a life of the most heartbreaking disappointment, the most distasteful tasks, the most spirit-breaking labour, and withal he knows that, no matter how hard he may work, no matter how diligent and conscientious he may be, there is no alleviation of his lot, no daily easing of the strain, such as workers in other walks of life earn for themselves. No; the teacher's only hope of "promotion" is to wait for dead men's shoes, and, even when he has at last attained the rank

of head teacher, it is only to find his responsibilities and worries trebled.

There are many forces at work in Britain which are inimical to education, and it shall be our aim to examine into some of these. In the first place, there is not in Britain that respect for education and educators that there should be, and this in my opinion is the root of the whole matter. "As the old cock crows the young one learns," and children are not much behind their parents in this respect. This widely diffused attitude of scarcely veiled contempt for the teacher is caused to a great extent by the teacher himself. Teachers as a class are utterly unbusinesslike, utterly blind to the things that matter most, and—utterly snobbish. It is a sad thing to say, but no one can deny its truth. The teaching profession can be best likened to a whale attacked on all sides by enemies, and blindly beating the air when by the exercise of its powers, rightly directed, it could speedily crush its adversaries. You must remember, gentle reader, that a teacher is a "professional" man, who receives "salary" and not wages; who does not need to take off his coat to work; whose "salary" is paid monthly and not weekly, like that of the common workman; whose holidays are long and whose hours are short; who would never for a moment dream of associating himself in a common trade union or federation with common labourers, hewers of wood and drawers of water. No, indeed; nothing so common for our bumptious "professional" man. It must be borne in mind that in many cases this spirit has been implanted in him by his sojourn at "college"—that manufactory of utterly unpractical things and obsolete theories. Indeed, the chief function of "college" in too many cases seems to be the implanting in the minds of the students of ideas of their own worth and consequence, which are not justified by their capabilities. I refrain here from quoting Burns on the subject, although the temptation is very great and the verse extremely pithy, but perhaps he was a little soured. Anyhow, we have our "professional" with his "salary" and the workman with his wages. The main difference between salary and wages is that one receives more of the latter.

Then, again, we have the usual number of short-sighted parents who cannot rush their children off to become wage-earners too quickly. Too often, alas! are boys advised against their best interests, and the teacher has to struggle against both natural inclination and settled prejudice. We are going to capture German trade after the war—at least, we say we are; but why didn't we attempt to capture it before the war, and what preparations are we making now to fit us for trade supremacy after the war? Certain it is that it is only the educated nation which can hope to survive in the struggle of the future. A prominent writer once enumerated the qualities essential in a teacher as follows:—He must have the patience of Job, the tact of a Richelieu, the diplomacy of a Pitt, the faith of a Paul, and the determination of the Devil. No one who knows anything of the work of a teacher will care to assert that this description is overdrawn.

We have on record the famous case of the Bishop who volunteered to take charge of a small school, in the temporary absence of the head master, and who broke his umbrella before he had been in the school five minutes. Of course there is nothing surprising in this to the initiate. A teacher must undergo an arduous training in one direction before he faces a class. After his college career, and from the commencement of his actual work as a teacher, he has to undergo another sort of training—training in the control of the temper and of the emotions. The most successful teacher is he who can hide and control his emotions. His nerves and temper, when he comes fresh to the work of teaching, are as unsuitable to his needs as would be his boots if they were made of the raw, untanned hide of the still bleeding bullock. No; his temper and his nerves have to undergo what may be likened to a daily course of salting, tanning, and toughening. How often do teachers hear the remark, "Oh, if I were a teacher I should commit murder in about five minutes, I know I should; I'm not good-tempered enough," &c. The people who speak in this strain forget, of course, that a special training is as necessary for the teacher as it is for every other skilled labourer. The Bishop with the umbrella did not possess this training, hence the smashing of his "gamp." Probably, had he been left longer in charge, he might have broken more than his umbrella.

One of the greatest anomalies of our educational system is the present system of inspection. When an Inspector enters a school he does not come to inspect the scholars, as is generally supposed. He comes to inspect the *teachers*. Of course he inquires in an extremely cursory manner into the attainments of the pupils; but the final responsibility rests on the teacher, and right well does the latter know it. The Inspector has no power over the pupil, but he has a great power over the teacher; and his good or bad report is literally a matter of bread and butter to the teacher. A pupil coming from a bad home, or from careless parents, can do practically as badly as he likes, and yet it is the teacher who is held responsible for his shortcomings. The teacher might, with great justice, ask in the words of the Scripture, "Am I my brother's keeper?"

Head masters, again, are as lacking in manly spirit as their assistants. The writer has seen head masters, men of the highest moral character doing the most important work of the nation, turned into palpitating masses of nerveless cowardice at the mere mention of an Inspector's being in the vicinity! And all on account of the despotic power of that functionary who, if he cares, can blast that head master's reputation with a word. One cannot blame Education Authorities for their so-called lack of generosity. The question of generosity should not enter into business dealings. It is not in nature to pay more for a thing if one can get it for less. The value of any commodity can be measured by the amount of money needed to purchase it, and, until teachers set the proper value on their services, they cannot hope for any amelioration in their condition. When a more manly spirit is manifested by the teachers, it will soon be reflected in the scholars; and the country, through the increased value of its future citizens will be the gainer.

### MR. FRANK RITCHIE.

AN APPRECIATION BY HIS OLD FRIEND AND  
COLLEAGUE MR. J. S. NORMAN (SEVENOAKS).

A VERY serious loss to the educational world and to a large circle of friends has been caused by the death of Mr. Frank Ritchie. He was born in 1847, and was educated at Lincoln College, Oxford, where he graduated in 1870, taking a Second Class in Classical Moderations and Greats. Soon after taking his degree he accepted a temporary post at Westminster School; on relinquishing it he went as an assistant master to the late Mr. Furness's (afterwards Mr. R. Lea's) preparatory school at Oakfield, Rugby. After some years there he joined Mr. G. L. Bennett, an assistant master at Rugby School, helping him to organize and start the new High School for Boys at Plymouth. In 1881 he left the High School, now well established, and started, with his friend and colleague Mr. J. S. Norman, as joint Head Master, a preparatory school at Sevenoaks, and remained in partnership with Mr. Norman till 1899. In 1901 he was appointed Secretary to the Association of Preparatory Schools, of which he was an original member; and in 1904 Secretary to the newly instituted Common Entrance Examination for Public Schools. Mr. Ritchie had taken a very prominent part in the promotion of this scheme, which has been adopted by most of the leading public schools and enables boys to be examined at their preparatory schools for entrance to the public schools, thus saving parents and preparatory-school masters the trouble, expense and anxiety of sending boys up for examination; and the details of the machinery by which this benefit is secured, by no means an easy matter to arrange, were practically due entirely to Mr. Ritchie's organizing ability and careful judgment. He continued his services as secretary until his last illness.

Mr. Ritchie represented the Preparatory Schools Association on the National Council for the Registration of Teachers, was a member of the Classical Association, and of the Joint Committee appointed by that and other educational bodies to deal with the question of grammatical terminology; he also served on the Federal Council and as Examiner to the College of Preceptors and occasionally for the Oxford Local Examinations, and in recent years served on the Selection Committee of the Admiralty dealing with the candidates for Osborne.

Mr. Ritchie possessed most unusual powers of organization and attended most minutely to details. His wisdom, tact, and excellent judgment have ensured the success of every undertaking that he has been connected with in any official or other capacity. He was held in the greatest respect and affection by all who had the privilege of knowing him. Mr. Ritchie was a most successful writer of school books for boys, some of which are used on the continent and in America. He was one of the first to insist that a knowledge of English should precede a knowledge of Latin, and his lucid explanations and clear exposition of first principles have saved schoolmasters from many mistakes and boys from many unhappy hours. He had a rare sense of humour and the kindest of hearts. Many will feel his loss and no one will wholly fill his place.

## CORRESPONDENCE.

### GRAMMATICAL REFORM.

To the Editor of "*The Educational Times*."

SIR,—At a meeting held under the auspices of the Teachers' Guild at University College, London, on January 3, to discuss the teaching of English in relation to the teaching of other languages, ancient and modern, remarkable unanimity of feeling was shown on the part of the large body of teachers present as to the need of a new departure in the teaching of English grammar, a subject which has been much neglected of late with disastrous results to the teaching of languages both modern and ancient. Emphasis was laid by several speakers on the fact that in the old days pupils were better provided than they are at present with a foundation of grammatical principles on which a study of foreign languages might later be erected. There was no intention to revive the mechanical methods of the past, but what was demanded was such a study of English Grammar as should serve as an introduction to the grammatical structure of all the foreign languages studied in schools. For a fuller statement of what this involves we may refer to the anonymous articles entitled "The Curriculum" (especially the article on language teaching of August 30) and "The Rediscovery of English," which have appeared within the last few months in *The Times Educational Supplement*. The desired results would, we believe, be achieved by intelligent teaching based on the scheme of grammatical reform proposed by the Joint Committee for the Unification and Simplification of Grammatical Terminology, whose report (published by Mr. John Murray, and to be obtained through any bookseller, price 6d.) has been recently commended to the attention of teachers (1) in the Report on the Teaching of French in London Secondary Schools, drawn up by six of H.M. Inspectors at the instance of the Board of Education (see section 74, page 34), and (2) in the Report on the same subject drawn up by Mr. Cloudesley Breyton for the London County Council [see page 13 (f)].

We, the undersigned members of the Standing Committee on Grammatical Reform, representing the Head Masters' Association, the Head Mistresses' Association, the Assistant Masters' Association, the Assistant Mistresses' Association, the Association of Preparatory Schools, the Classical Association, the Modern Language Association, and the English Association, hope that we may at this juncture render a service to education by asking for information on the following points:—(1) How far efforts have already been made in schools to co-ordinate the teaching of foreign languages with English and with one another; (2) whether the scheme of terminology put forward by the Joint Committee has been found useful to this end.

We should be grateful if heads of schools would kindly help us by sending information on these two points to the Hon. Secretary of the Standing Committee, Miss Edith Hastings, 180 Elm Park Mansions, London, S.W. 10.

An immediate response to this request would greatly assist us in the further steps which we contemplate taking.—We are, yours faithfully,

E. A. SONNENSCHNEIN  
(Chairman of the Standing Committee),  
CLOUDESLEY BREYTON,  
R. M. HAIG BROWN,  
EDITH HASTINGS,

### THE BOARD AS GUIDE, PHILOSOPHER, AND FRIEND.\*

A PICTURE of a boys' school some fifty years ago might show us the timid boy working feverishly, but ineffectively, under the influence of the cane; the diffident boy confirmed in his diffidence by the apparent impossibility of avoiding punishment; the dishonest boy encouraged in his lying to escape detection in his idleness; the hardy boy accepting his frequent floggings as part of the natural inconveniences of being a boy, but not allowing the cane to influence his work; the vain boy and the studious boy sticking to their books—the one to gain praise, the other from liking. The school of that period was governed by an autocrat who laid down the same rules for the tall boy, the short boy, the lean boy, and the fat boy, and who punished for any breach. Such an autocrat considered that all boys must learn certain things or be punished for not doing so.

A picture of a school of to-day that could be reconstructed from the Board's "Suggestions" would show us a head master and a group of assistants working together, discussing, investigating, drawing up a careful scheme of work, after mutual consultation, to suit the capacities and interests of the boys whose characters and powers they had studied and considered. The masters would know the boys, and cooperate with them in their desire for knowledge and skill. Punishment would be rare, and would aim at strengthening a boy's character, and not at cowering him.

Many persons who find themselves confronted with the stone wall of a too rigid rule of the Board, or of a too pedantic Inspector, are inclined to look upon all officialism as deadening and impeding; there is ground for this view. But in the "Suggestions" the Board have shown that somewhere on their staff are a group of men thoroughly enlightened and completely human. It is twelve years since this brochure was first issued. At the time it was cordially welcomed as showing a new spirit in the Board. The preface stated quite euphematically that there was no intention of adding to the regulations, that the suggestions were what their name implied, and that "the only uniformity in practice that the

\* Revised edition of the Introduction to "Suggestions" for the consideration of Teachers and Others concerned in the Work of Public Elementary Schools. Published for the Board of Education by H.M. Stationery Office, price 2d. net.

Board of Education desire to see in the teaching of public elementary schools is that each teacher shall think for himself, and work out for himself, such methods of teaching as may use his powers to the best advantage, and be best suited to the particular needs and conditions of the school." Enthusiastic reformers are apt to forget this when they speak of the one method, or the best method of teaching a particular subject. The best method that a teacher can use is the method best suited to the conditions of his work and to his own powers and character. Head masters have been known to make the mistake of ordering a certain method to be employed, regardless of individual taste or capacity. A man who adopts a method unwillingly, and without full belief, is not likely to be successful in carrying it out. On the other hand, a teacher should not stick to his own method from dislike of change or from disinclination to trouble, without fully investigating the alternatives that are suggested.

The Board very wisely issued the first edition as a tentative essay, and asked for criticisms. Since 1905 the various chapters dealing with special subjects have been amended and reissued from time to time. The brochure before us is designed as an introduction to the complete volume. It does not therefore, except incidentally, treat of the subjects in the curriculum, but of general matters. In every case, under all the sub-headings, the treatment seems to us to be thoroughly sound. The writers are careful to avoid dogmatic statement, but they manage to make every paragraph stimulating to thought and inquiry. One obvious criticism will come to the readers' lips from time to time, if he be a master in a public elementary school. He will say: "I can't do this under existing circumstances; I only wish I could." For example, when a number of children in the lower standards are found to be backward, it is suggested that they should be formed into a special class. "Quite so," replies the critic; "but there is no teacher to take that class." The reply of the Board would no doubt be to the effect that the staffing of schools is gradually improving, and that, even when no teacher can be found to take such a special class altogether, yet that, if the principle of giving extra attention to the weaklings is kept in mind, some opportunities of carrying out the plan will probably be found.

Although the Board's "Suggestions" are addressed to teachers in public elementary schools, there is much in them that may be helpfully pondered by teachers in any grade of school. Under the sub-heading of "The Head Teacher and Staff" we find much useful advice in the direction of co-operation. In the past the head master has often been too much of an autocrat, and has failed to see that much better results can be obtained when every teacher feels that he is co-operating in the work of the school as a whole; when his views are considered, his knowledge placed at the disposal of all, and when his special powers receive their opportunity. When the head master is an autocrat, the class master tends to become a minor autocrat in his own classroom, and to limit his interest in the school to the four walls of his compartment. The democratic principle is crying aloud for admittance into schools of all grades. The "Suggestions" say: "To make the most of his staff, and keep them in touch with the work of the school as a whole, is so obvious and important an object for the head teacher, that he should try every practicable device to secure it. Periodical conferences are one necessary part of the school routine which is not always put to its full use. They should be held regularly to discuss changes in the scheme of work, to put teachers in possession of what is being done in other classes, to compare the results of the periodic examinations, or to discuss the value of a new method."

"Teachers and others connected with education should do their best to dispel the harmful error—which the old system of formal examination tended to foster—that the work of the schools is a mystery not to be penetrated except by the initiated." The Board here have emphasized a fundamental weakness which is widespread if not universal. Perhaps there is no teacher who does not feel, in a greater or less degree, that his art is a mystery, and that no one except a teacher can usefully discuss it. All organized professions tend to acquire this weakness. Hence we hear so frequently of the annoyance felt at the interference of parents. If parents are ignorant of the aims of education, it is time that teachers enlightened them. It is certainly healthy for a school to be

in touch with parents, and to let the parents in behind the scenes to see something of what is being done. Of course, the rude fact is that we dislike parents in the classroom because we feel that there we are no longer human beings, but we have become that artificial thing known as a schoolmaster; and we do not like to be seen in this character by the outside public. It is equally true that we object to the question, "What is the good of it?" because we are not proud of the only answer we can truly give. We usually teach certain things in certain ways because we were told to do so in the training college, or because we did the same when we were boys at school, or because the subject always has been taught, or because the parents wish it, or because the outside examination makes it necessary. No one of these answers is really satisfying to parents anxious for information, and so we keep out of the parents' way, or if we cannot avoid the question we shake our heads sapiently, and say that it is a matter for the school to decide: the school has special knowledge that is hidden from parents. This extract that we have quoted may have far-reaching effects in lessening the artificiality of the schoolmaster's attitude towards life.

There is much that is helpful in the chapter on training of character and school discipline. It is recognized that the teacher has a difficult task; he has to reconcile two conflicting aims. He has to encourage initiative and self-reliance, and at the same time must maintain control. In the past there has, perhaps, been too much control in the elementary schools. In secondary schools the control within the school walls has been too rigid, and outside not sufficiently so. A teacher in a secondary school might do well to spend twopence on this pamphlet, and an additional penny on the section dealing with the subject that he teaches.

## THE COLLEGE OF PRECEPTORS.

### MEETINGS OF THE COUNCIL.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 28th of November, 1917. Present:—The Rev. C. J. Smith, in the Chair, the Rev. F. W. Aveling, Mr. Bayley, Mr. Brown, Mr. F. Charles, Mr. Eagles, Miss Frodsham, Mr. Gregory Taylor, Mr. Hardie, Mr. Hay, Mr. Holland, Miss Lawford, the Rev. R. Lee, Mr. Maxwell, Mr. Millar Inglis, Mr. Morgan, the Rev. Dr. Nairn, Mr. Roscoe, Mr. Rushbrooke, Dr. Sibly, Mr. Starbuck, Mr. Thornton, Mr. Whitbread, and Mr. White.

In response to a request from the Midland Branch of the Private Schools Association, Mr. John Bayley and Mr. J. S. Thornton were appointed to address the members of that Branch on the subject of Local Examinations.

The Diploma of Associate was granted to Miss Mary Ann Hayes, who had satisfied the prescribed conditions.

A grant of £5 from the College Benevolent Fund was made to a life-member of the College.

On the recommendation of the Examination Committee, it was resolved (a) that alternative questions in Botany be set for colonial candidates, and (b) that special Senior History papers on the Cape Matriculation Syllabus be set for South African candidates.

The following persons were elected members of the College:—

Mr. G. P. Dymond, M.A. Lond., 6 Lockyer Street, Plymouth.  
Mr. F. G. S. Ward, L.C.P., 46 High Street, Dunblane.

The following books had been presented to the College since the last meeting of the Council:—

By the OXFORD UNIVERSITY PRESS.—Oxford Spanish Plain Texts (Fabulas Literarias, and Fabulas en Verso); Oxford Russian Plain Texts (Dostoevski's Christmas Tree, &c., and Gogol's Old-World Country-House); Beazley's Note-Book of Medieval History, A.D. 325-1453; Forbes's Third Russian Book; Freeman's Livy, Book I, and Virgil, Aeneid, IV; Freeman and Lowe's Greek Reader for Schools; Hadow's Selections from Sir Walter Raleigh's Writings; Haigh's Analytical Outline of English History; Herbertson's Junior Geography, and Senior Geography; Lamborn's Selections from Longfellow; Mainwaring and Paine's *Secunde Annus*; Smith's Shakespeare Criticism: a Selection; Underwood and Forbes's Tolstoy's Prisoner of the Caucasus.  
Calendar of the University of Bristol.  
Calendar of the University of Manitoba.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, on the 19th of Janu-

ary, 1918. Present: Prof. Adams, Vice-President, in the chair; Prof. Adamson, the Rev. F. W. Aveling, Mr. Bain, Mr. Barlet, Mr. Brown, Miss Frodsham, Mr. Hardie, Mr. Longsdon, Mr. Maxwell, Mr. Millar Inglis, the Rev. Dr. Nairn, Mr. Pendlebury, Mr. Roscoe, Mr. Rushbrooke, the Rev. C. J. Smith, Mr. Somerville, Mr. Starbuck, the Rev. Canon Swallow, Mr. Vincent, and Mr. Whitbread.

The Secretary reported the death of Mr. J. L. Butler, a member of the Council and the Hon. Local Secretary for the College Examinations at the Cheltenham Centre; of the Rev. Dr. Montagu Butler, an honorary member of the College and Moderator in Classics; and of Mr. F. Ritchie, a member of the Council and Examiner in Classics. The Council expressed their deep sense of the loss sustained by the College, and directed that letters of condolence be sent.

The Council considered and adopted an important memorandum relating to private schools, drafted by a Joint Conference of representatives of the College and of the Private Schools Association. It was resolved that the President of the Board of Education be asked to receive a deputation in order that the proposals in the memorandum might be laid before him.

The Dean was appointed the representative of the College on the Secondary School Teachers' War Relief Fund Joint Committee.

The Rev. F. W. Aveling and Mr. Millar Inglis were appointed the representatives of the College on the Joint Scholarships Board for the year ending 28 February, 1913.

Mr. R. F. Charles, Miss Crookshank, and Dr. Elizabeth Dawes were re-elected members of the Council.

The following persons were elected members of the College:—

Mr. T. B. Martin, Wanstead College, Snaresbrook.  
Miss E. Webb, Halidon House, Slough, Bucks.

The following books had been presented to the College since the last meeting of the Council:—

By GINN & Co.—Caldwell and Eikenberry's Elements of General Science; Caldwell, Eikenberry, and Pieper's Laboratory Manual for General Science; Packard's Everyday Physics.

By W. RICE, jun.—The *Journal of Education*, 1917.  
Calendar of Queen's University of Belfast.

## REVIEWS.

*The Advanced Montessori Method.* By Maria Montessori. (8s. 6d. net. Heinemann.)

The sub-title of this book runs "Scientific Pedagogy as applied to the education of children from seven to eleven years." It may be said at once that the volume does not correspond to this description. It is true that it is marked "Vol. I: Spontaneous Activity in Education." Perhaps in Vol. II there will be a specific application to the case of children between the ages specified, but in what now lies before us we fail to find anything very different from what we have already had from its authoress with regard to children at the "infant" stage. Further, there is nothing particularly scientific about the treatment. Indeed the style suggests anything rather than the scientific attitude of mind. The author too often writes ecstatically, and makes a somewhat unscientific use of italics. Her continual references to the Bible and to the saints are perhaps to be counted to her for righteousness, but they certainly do not help to give a scientific atmosphere. The arrangement of the book, too, leaves something to be desired. The last chapter, for example, by far the longest in the book, begins well by dealing with its nominal subject—Imagination. But by and by it wanders off into repetitions of what has been said in the earlier chapters, and ends with a great deal of miscellaneous matter on morals and religion that have nothing specifically to do with imagination as such.

A very successful part of the book is that in which Mme Montessori deals with the mistakes of our present methods of treating young children. Her "Survey of the Child's Life" certainly quickens the conscience of the honest and open-minded adult, and makes him wonder whether he has been behaving sanely towards the little people. The "Survey of Modern Education" is an effective attack on our whole school system, which loses some of its point because of the Italian

illustrations, but which comes close enough to the bone to make even English teachers uncomfortable. Our authoress makes a capital point against the "pedagogists" (a ghastly addition this to our vocabulary) by quoting Claparède's explanation that the first duty of the educator is to do no harm, but that it cannot be fulfilled entirely "because every method of scholastic education is in some way prejudicial to the normal development of the child. But the educator will seek to alleviate the injury which instruction necessarily entails."

Mme Montessori's real contribution to experimental science in pedagogy is her investigations into the origin and working of attention and obedience. Starting with the principle that the organization of psychical life begins with the characteristic phenomenon of attention, she maintains that something or other will certainly capture the attention of the young child, and that this first step can be used for the further development of the child's nature.

Two striking examples are given of the beginnings of an application of the system in schools. The reader is impressed by the frank acknowledgment of the original state of chaos and the preliminary disappointment of the enthusiastic teachers. The passage from introductory anarchy to ordered discipline, of the natural kind that Mme Montessori demands, is of the deepest interest to every teacher, and a full development of this aspect of the work would be worth volumes of the exclamatory stuff that takes up so much good space in the rest of the book. The diagrams on pages 97-108 represent very valuable interim results that need verification. The conception of "false fatigue," for example, offers an admirable field for confirmatory experiment.

Naturally the idea of freedom forms a basic subject in the book, and here, as in her other works, our authoress makes it clear that she is misunderstood when she is represented as advocating mere licence, as in the anarchic schools of Tolstoy. She admits that "every lesson infringes the liberty of the child," and for this reason she goes on to say that she allows a direct lesson "to last only for a few seconds." The limitations of the freedom of the child are made to come from within. By manipulating the child's own reactions to the stimuli leading to attention, the teacher is enabled to guide the attention of his pupils without infringing on their liberty. Here again we sit respectfully at the feet of the authoress.

There is nothing particularly fresh in the chapter on the intelligence, but when we come to the imagination we have Mme Montessori's well-known attack on fables and fairy tales. She regards these as the equivalents of "baby talk," and would have them eliminated on the same principle that would make sensible people talk the ordinary mother tongue to little children. Make-believe, she maintains, is really the child's attempt to gratify desires otherwise unattainable. It would thus correspond somewhat to the Freudian dream. In any case the only result of encouraging fairy tales and make-believe is the cultivation of credulity, which as a scientific person our authoress cannot tolerate. In the somewhat obscure treatment of the moral and religious aspect of education the book supplies material that will be welcomed by the controversialists on this subject—both sides will get ammunition here.

The reader will get up from this book with the impression that he has been prepared for something more, and will feel that he is not in a position to say how far he has profited by it till he has seen the sequel to which it leads up. We look with some eagerness for the second volume.

*Cambridge Essays on Education.* Edited by A. C. Benson. (7s. 6d. net. Cambridge University Press.)

The editor tells us that he wanted "to collect the opinions of a few experienced teachers and administrators upon certain questions of the theory and motive of education which lie a little beneath the surface." The following list exhibits the result:—The Aim of Educational Reform (Mr. J. L. Paton), The Training of the Reason (Dean Inge), The Training of the Imagination (Mr. A. C. Benson), Religion at School (Mr. W. W. Vaughan), Citizenship (Mr. A. Mansbridge), The Place of Literature in Education (Mr. Nowell Smith), The Place of Science in Education (Mr. William Bateson), Athletics (Mr. F. B. Malim), The Use of Leisure (Mr. J. H. Badley), Preparation for Practical Life (Sir John McClure), Teaching as a Profession (Mr. Frank Roscoe).

What is a reviewer to do in face of such a list? If he considers the importance of the subjects, he has to recognize that each deserves a review to itself; while, if he takes account of the distinction of the writers or the value of their contributions, the claim for individual treatment is strengthened instead of weakened. All that can be done is to give a general estimate of the whole, and beg the reader to believe that only lack of space prevents each article from being treated with the fullness it deserves.

Mr. Benson always writes attractively, and he is particularly fortunate in this book, because he can combine his usual charm of style with the authority that we are all willing to concede to a successful veteran in our profession. There is nothing strikingly new in his treatment of the imagination, but every teacher will feel the better and the happier for having read the chapter. Boys are going to have a pleasanter time because of the appearance of this book, for Mr. Benson's contributors play up admirably to his lead in this direction—notably Mr. Nowell Smith, who puts literature in just the position that every true bookman would give it. Mr. Paton is inspiring as usual, and Dean Inge gives no trace of the characteristic that figures so prominently in the newspaper references to his utterances. We think he is wrong in his reference to William James, and we think that ignorance is not the proper antithesis to reason; but we greatly enjoyed the article, and admire such happy sentences as "the soul is dyed the colour of its leisure thoughts." Mr. Vaughan does not flatter his profession by calling it "comparatively learned," but the very expression shows how carefully he weighs his words. He gets to the heart of his subject when he tells us that the real problem is "how to spiritualize education." But we cannot see his justification for saying that it is "perhaps harder for the schoolmaster than for any other man" to put himself in the place of another. There is certainly no other professional man whose success depends more on being able to perform this difficult feat. Mr. Mansbridge does a good deal to clear up the problem of the direct and the indirect instruction in what is now called Civics. He speaks with authority on the attitude of the working classes towards education in general, and he documents his argument very thoroughly. Mr. Nowell Smith is refreshingly brisk in his treatment of literature, and brings all a practical schoolmaster's acumen to the problems he tackles. We must all take to heart the lesson of his "What begins as an inspiration hardens into a formula"; while most of us will be at least greatly interested in his view that the theory that regards the value of a subject as determined by the amount of drudgery it involves "rests upon a confusion between the ideas of discipline and punishment, which itself is probably due to the strongly Judaistic tone of our so-called Christianity." Dr. Bateson's contribution on the educational position of science stands out as emphasizing the powerlessness of education. Taking a resolutely determinist attitude, he maintains that we must limit our hopes from education to its two scientific aspects "as a selective agency, but equally as a provision of opportunity." He takes a pessimistic view of the possibility of imparting to our ruling classes any tincture of the scientific spirit. Like Charles Lamb, he divides humanity into two races, but unlike Charles, his *principium divisionis* is not financial, but biological. The one race can appreciate science, the other can not; and unfortunately the negative group is much the larger. Greatly daring, we decline to accept this view without further evidence. Dr. Bateson is less pessimistic in other directions, if equally suggestive. He has no respect for the sacred precepts of the educationist, and even challenges the principle of proceeding from the particular to the general. All this heterodoxy we welcome, as, like the rest of the doctrine of this "live" book, it all tends toward the recognition of the individual interest (and therefore "interests") of the pupil.

In dealing with athletics, Mr. Malin assumes that it is the parent, and not the schoolmaster, who puts school games in their position of unwholesome eminence. If we can only get parents to recognize the schoolmaster's point of view in the matter, all would be well. Maybe he is right in this surprising contention. In any case, his readers are all the better for the little shock he has provided. Mr. Badley might well have treated of the need to provide leisure before proceeding to discuss how to use it. Surely it is a little late in the day to speak seriously of the "training value" of chess. As

everybody would expect, Sir John McClure is eminently sane and practical in his treatment of the preparation for life. The key-note to his position is to be found in his contention that the employer is entitled to say what sort of boy or girl he wants the schools to produce, and leave the means of obtaining this product to the teacher. It is seldom that the balance between the utilitarian and the cultural is so well maintained as in this article. Mr. Roscoe favours the training of teachers in schools rather than in training colleges, but maintains that the Departments of Education in the Universities should develop scientific research into the principles of teaching, and to this end should be brought into close touch with the schools in which teachers are obtaining their training. He adopts a sanely optimistic view about our professional status, and demands a cultivation of the "mystery" of our art, thus fittingly closing a volume that deals with that mystery in a popular, but none the less effective, fashion. All progressive teachers will thank Cambridge for this contribution.

*Collected Papers on Analytical Psychology.* By C. G. Jung. Authorized Translation, edited by Dr. C. E. Long. (15s. net. Baillière, Tindall, & Cox.) (Second Edition.)

The original edition of this work was reviewed in these columns, so that the only matter we need to notice here is that supplied in Chapters XIV and XV, which bring the subject up to date. To begin with, we must not lose sight of the significance of the fact that a second edition of a work of this kind should be called for within eighteen months of its first appearance. There must be more interest in psychoanalysis than the layman is apt to think. It is true that the main bearing of the work is medical, but the teacher cannot fail to find in it something of value, and it is to be hoped that some, at least, of the demand for the book comes from our profession. There is, no doubt, a great danger of morbidity in dealing with this aspect of psychology. The pathological element is necessarily over-developed from the point of view of the teacher's needs. But the wholesome-minded educator who takes up this volume cannot fail to get suggestions of the utmost importance in guiding his daily work.

The fresh matter largely consists in an elaboration of the analysis of the unconscious, with particular reference to the extrovert and the introvert aspects. Dr. Jung discriminates between two kinds of psychological material—the personal and the impersonal. The former elements have the characteristic that their universal validity is not recognized, whereas in the case of the impersonal elements that validity is recognized. The second group may also be called collective, since they belong to the whole human race. The scheme presented, in fact, is that the unconscious of each individual contains a great body of elements that do not belong specially to him, but are common to humanity. All the points in which human beings act uniformly and inevitably are explicable by reference to this common element. In myth and folk-lore we find the explanation of many of our ways of thinking and acting, for in these world-wide forms we have our individual bias "writ large." Dr. Jung acknowledges that our English scholars, Taylor and Frazer, have supplied valuable material in this department, though they have failed to give the true explanation of what they have discovered. Both personal and impersonal elements occur among the conscious contents as well as among the unconscious. The personal elements found among the unconscious contents consist of "repressed materials of a personal nature that have once been relatively conscious, and whose universal validity is therefore not recognized when they are made conscious." The personality, or conscious ego, is made up of the conscious personal contents, while the unconscious personal contents constitute the *self*, by which Jung understands the unconscious or subconscious ego. He rather gloats over the derivation of the word *person* (from *persona*, a mask), for it fits in extremely well with his view that personality is really nothing more than a mask thrown over the collective psyche.

Now, to the practical English mind all this sounds excessively vague, mystical, and unconvincing. The metaphysical approach is as distasteful to the English schoolmaster as Jung tells us it was to Robert Mayer. But Jung himself is distinctly metaphysical; many of his arguments carry us irresistibly back to the methods of the old schoolmen in their struggle with individuation. Fortunately we do not need to

follow Jung into his arguments about causality. In this domain he has no special authority; his strength lies in the new point of view he has selected, and the help that he can give the educator by supplying a fresh orientation. His manipulation of the unconscious ego cannot fail to suggest practical applications by the progressive teacher. What goes on below the threshold of consciousness is no longer a matter of indifference to us. We may be afraid that the activity going on there is rather a matter for the alienist than for us. But it is cheering to be told that "only in pathological cases should this activity be thought of as comparatively autonomous, for normally it is co-ordinated with consciousness." We have ventured to italicize the final words, for they clear the way to an educational approach. After all, our interest is mainly in the normal, wholesome person, and it clears away a certain amount of suspicion when we find that, though he writes mainly for doctors, our author recognizes that the educator also has his part in the application of the new conceptions. Indeed, Dr. Jung speaks regretfully of the slowness of his fellow medical men to take up the new ideas, though they grudge them to others. "Psychoanalysis—greatly to the regret of the medical man who, however, had not accepted it—then passed over into the hands of the teaching profession." This is right; for it is really, when properly understood and handled, an educational method. We wonder how far this is true of our country. How many of our teachers have ever heard of introverts and extroverts? Yet so soon as these types are described to an intelligent teacher he sees the value of the classification, and seeks out opportunities for putting it into practice in his dealings with his classes. It is a little discouraging, however, to have Dr. Jung's assurance that it is impossible for one type of personality completely to understand another. For obviously it is of the very essence of our work to be able to understand the two types, and obviously the teacher himself cannot be both. But we get the comforting assurance that "an excessive desire to understand or explain things is just as useless and injurious as a lack of comprehension." Teachers, therefore, who read this book may feel themselves exonerated from mastering all its complicated details, if only they give their full attention to the many matters that give them direct help in their work.

*A Short History of England.* By G. K. Chesterton.  
(5s. net. Chatto & Windus).

Within the limits of these 230 pages the reader does not expect to have a detailed history of England, nor does Mr. Chesterton claim to be a trained historian. He has in fact written a delightful essay on English History. His qualifications for such a piece of work are, in addition to his wide reading and excellent memory, his freedom from traditional historical bias and his desire to probe the truth of accepted historical dogma. The style, of course, cannot be other than Mr. Chesterton's own. His use of linguistic contrasts may sometimes amuse and sometimes excite thought; but repetition in the end induces weariness. Whether the Reformation reformed anything is left an open question for the reader; but he is very definitely told that the chief point of the Reform Bill was that it did not reform. Something, it is allowed, was restored at the Restoration. The Puritans felt the omnipotence of God; consequently they were convinced of man's impotence. Some modern experts advise Teachers of history to begin from the local castle, or market-place, or battle-field. Mr. Chesterton would start from trousers and top-hat: "The history of these humorous objects really does give a clue to what has happened in England in the last hundred years."

Mr. Chesterton finds that in the history books the Puritans are credited with almost every possible quality except the one they really aimed at and cared for. This was the quality of individuality. No one might come between a Puritan and his God, and consequently no influence might come between him and his view of intellectual and spiritual matters. After a full analysis of the Puritan's mental position we are told that "the doctrine is quite tenable, if a trifle insane." Mr. Chesterton makes no claim to impartiality, and it is clear that to his temperament the Puritan attitude towards life is unpleasing.

Through the later chapters there runs a recurrent theme to the effect that for the last three or four hundred years England

has been becoming more and more Germanized: the local spirit that gave life to the Guilds and Boroughs has succumbed to the deadening control of the Local Government Board, to take one example out of many. In educational matters this bureaucratic spirit is still growing. We have said enough to demonstrate that Mr. Chesterton's fresh treatment of the subject challenges the dogmas of historians.

*A World in Ferment.* Interpretations of the War for a New World. By Nicholas Murray Butler. (Charles Scribner's Sons).

President Murray Butler thinks on a wide and lofty plane as the Head of a great University may be expected to do; but there is no trace in his writings of the aloofness from mundane affairs that too frequently nullifies the effect of the academic pen. Throughout this collection of addresses the reader is conscious of a mind trained to bring a searching examination upon current events, able to penetrate the outward husk which so often checks the practical politician, and skilful in well-poised expression, neither understating nor overstating the facts.

The volume holds seventeen addresses delivered on various occasions to different audiences. They have all been written since the European War broke out, and the later ones since the United States joined the combatants. While America was neutral the author was to some extent held in check, though the address entitled "Is America Drifting?" delivered in February, 1917, to a Chamber of Commerce, is a trumpet call to American citizens to tackle the problems of the time and not, out of indifference, to leave their solution to professed politicians. If we may venture to try to sum up briefly Prof. Murray Butler's message to his generation, it would run somewhat as follows. Learn to think—not imperially, that is a stage that has passed—but learn to think internationally; consider events from the point of view, so far as is possible, of all nations: democracy means an intention to secure the best possible conditions of life not for one favoured nation alone, but for all nations. There can be no world-peace while any part is held in unwilling bondage.

#### OVERSEAS.

When Mr. H. G. Wells gave his enthusiastic account of how America dealt with her immigrants and turned them into satisfactory citizens, he set up in our minds an idea of efficiency that gets rather a shock when we learn that, in spite of all that has been done, "official records show that approximately three million foreign-born whites residing in the United States do not speak English." Naturally our Allies across the Atlantic are not pleased with this, and with their usual energy are setting about mending matters. A deliberate campaign is started for the Americanization of all the unassimilated elements, and funds are being raised to carry it on. In the City of New York 78,000 dollars have been set apart for this purpose, and throughout the whole land there will be a vigorous prosecution of a scheme for encouraging the rapid acquisition of the English language by immigrants as the first step in turning them into genuine Americans.

Another interesting movement going on in the States is known as "co-operative education." It consists in the correlation of the forces of industrial and commercial firms with the educational institutions that happen to be in their area. The shop becomes a sort of industrial laboratory for the local college or University, and the industrialists and the professors find their mutual advantage in working into each other's hands. The University of Cincinnati, for example, appears to co-operate with nearly a hundred different firms connected with manufacture, transport and general construction. The matter is being taken up very generally and its success suggests that we should do well to keep the plan in view when working out our own schemes of educational reconstruction.

In England we are just becoming aware of the rapid development that is going on in America of a scheme of standardizing the tests applied to the work done in schools. Scales have been prepared now in quite a number of the ordinary school subjects. Thus, we have scales in reading,

(Continued on page 22.)

"The third volume of the 'Cambridge Travel Books' fully maintains the reputation among teachers that the first two have gained. To study history or geography almost from the very first from original sources, and at the same time to make acquaintance with great literature, is part of the liberal education that can hardly be begun too early."—*Journal of Education*

EDUCATIONAL CATALOGUE.—A revised edition of the Educational Catalogue showing several changes in prices, is now ready, and will be sent on application

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

writing, arithmetic, spelling, composition, drawing, languages. There is still much difficulty in applying the scales, and a great deal has yet to be done before we can hope for quite satisfactory results; but at any rate an excellent beginning has been made, and the matter is being taken very seriously indeed. We learn from the *School Review* (Chicago) that the Kansas State Normal School maintains an active bureau of educational measurements and standards, and actually appears to have turned itself into a sort of clearing house, or central store, from which very many of the scales already published can be directly obtained. The bureau has published a useful pamphlet called "Announcements and Price List," in which are found particulars of all the leading scales. Our readers may be interested to know that there are now nearly thirty of these scales, and that they cover almost all the subjects of the elementary and the high school.

For long there has been a difference of opinion in America between two groups of those who seek to further the interests of the high schools. One group wishes to keep the schools purely "cultural," the other desires to introduce into every high school a certain amount of vocational training. The second group maintains that its plan is the only way to save the high schools from falling into a subordinate position to a set of new schools that will be definitively vocational. It would appear that this issue is now to be sharply put to the citizens of the States by the Smith-Hughes Act that came into operation on January 1. Under this law a State can get a grant from the federal funds of dollar for dollar on the amount the State contributes towards the maintenance of vocational schools. A feature of the law that will commend itself to us is that the funds thus obtained must be spent directly on salaries, and in no case can more than half of the salary be paid out of these funds. What is troubling thoughtful schoolmen is that there is a danger of the new grant tending to encourage the establishment of a dual system of schools, and that the result may be a cleavage such as is found in Germany between schools for the classes and others for the masses.

It appears that Illinois, after a careful study of the German plan, deliberately refused to set up such a dual system, while we are told that Wisconsin has deliberately adopted what Illinois rejected. To avoid this undemocratic system the various States appear to be arranging that the new law shall be administered by Boards that act in full co-operation with the existing educational committees. But the press seems to be a little anxious lest divided authority may creep in unawares in some of the States. The fact of the matter is that the American tendency towards centralization is leading the citizens to see more clearly than they did before the dangers of which we on this side are particularly well aware. Each of us sees more clearly the dangers of our own system and the advantages of our neighbours'. The Americans will do well to keep an eye on our efforts to keep the Board of Education within its proper sphere.

All that is known in England about the Gary System has been in its favour. So it comes as a surprise to read that its adoption in New York City has led to trouble. It is true that we knew that the teachers in America were somewhat in doubt about Mr. Wirt's plans because they suspected that the popularity of the system with the authorities arose from the expectation that it would prove a cheaper scheme. When convinced that their professional economic interests were not in danger, the teachers were prepared to give the system a fair trial.

It was the politicians who raised objections. The Tammany people who naturally have no concern with anything so unfinancial as education found in the proposed introduction of the Gary system an instrument as good as another to fight their opponents with. The children themselves were called out in the political quarrel, and we had the humiliating sight of the children of the Bronx district out on strike and copiously photographed in the interests of the newspapers. It is well that we on this side should keep our minds quite clear on the point that what happened had nothing whatever to do with the merits of the new system. English teachers will be well advised to keep a careful eye on its development. It may have an important effect in modifying the course of educational legislation in this country, working more, however, from the local centres than from Whitehall.

## GENERAL NOTICES.

### LATIN.

*M. Tulli Ciceronis: Pro Lege Manilia sive de Imperio Cn. Pompei Oratio.* Edited by John R. King. (2s. 6d. Clarendon Press.)

A scholarly edition with the text of Prof. A. C. Clark and notes and introduction taken from the editor's larger work. A vocabulary, compiled by C. E. Freeman, has been added.

*Continuous Latin Prose.* With Syntax. By H. J. Dakers. (5s. 6d. Rivingtons.)

The book is intended to provide an easy transition from elementary exercises to continuous prose. The introductory hints occupy 150 pages; and then come about 170 pieces of continuous prose, the earlier pieces being very simple. There is also a vocabulary.

### FRENCH.

*Cours Russes.* Par le Vicomte E.-M. de Vogüé.

Edited by Eugène Pellissier. (2s. 6d. Macmillan.)

A new volume of Macmillan's Advanced French Series, under the general editorship of Otto Siepmann and Eugène Pellissier. At the present moment a description of Russian life by a French writer will be read with interest. This volume is the first that has brought De Vogüé into the classroom. In addition to the usual appendixes this edition has *Questionnaires* and *Sujets de Rédaction*.

"Oxford French Series."—(1) *Adrienne Lecouvreur.* By Scribe and Legouvé. Edited, with Introduction and Notes, by Theodore Ely Hamilton. (2) *Le Marquis de Villemer.* By Georges Sand. Edited, with Introduction and Notes, by Charles E. Young. (Each 3s. net. Milford.)

Two volumes by American scholars. The type is exceptionally good and the introduction and notes are kept well within reasonable limits. Each volume has a portrait.

*Le Petit Chose: Histoire d'un Enfant.* Par Alphonse Daudet. Abridged and edited, with Notes, Exercises, and Vocabulary, by Victor E. François. (2s. Ginn.)

The biographical notice is written in French, as are the exercises, with the exception of English passages for translation; but English is used in the notes and English equivalents are given in the vocabulary. The volume is therefore a compromise. There are several illustrations.

*Cours de Français pour les Etudes Scientifiques.*

Par A. G. Haltenhoff et C. Bouly. (3s. 6d. net. Hachette.)

The idea of the book is good; it provides copious graduated passages on mathematics, physics, chemistry, zoology, botany, geology, agriculture, physiology, psychology, and political economy. There are about 350 quarto pages of reading matter, together with grammar rules and examination questions.

*Language Student's Manual.* By William R. Patterson. (2s. net. Kegan Paul.)

A book that may be read with profit by any grown-up learner or teacher of languages. The first part of the volume is concerned with general suggestions, the second with the sounds, treated scientifically, peculiar to seventeen modern languages.

### GERMAN.

*The War and the Study of German.* By Gilbert Waterhouse. (6d. Dublin: Hodges.)

A lecture delivered by Dr. Waterhouse in Trinity College, Dublin, in the early summer of this year; it contains a carefully reasoned argument to show why the study of German should not be neglected. "We study German," says the lecturer, "in order to extract from the language, the literature, the people, and the country the maximum of benefit—moral, intellectual, and material—to ourselves."

*Merkbuch of Everyday German Words and Phrases.*

By Basil Readman. (2s. 6d. net. Blackie.)

A notebook for learners of German, carried out on the same lines as the *Aide-Mémoire* issued a year ago for French pupils. There are lists of nouns classified under headings, followed by phrases and some German verse for learning by heart. A number of blank pages enables the student to make such additions as he deems helpful.

### RUSSIAN.

*Bondar's Simplified Russian Method: Conversational and Commercial* (Second Edition). Compiled by D. Bondar. (5s. net. Eppingham Wilson.)

The second edition has been largely rewritten. Questions for conversational practice have been added and anecdotes have been inserted into the lessons. The book is complete and gives all the

guidance that an absolute beginner needs in the early chapters, continuing to advanced work in reading and writing.

*A Prisoner of the Caucasus.* By Leo Tolstoy. Edited, with Introduction, Notes, and Vocabulary, by E. G. Underwood and Nevill Forbes. (2s. 6d. net. Clarendon Press.)

For some pupils the Plain Texts issued by the Clarendon Press proved insufficient. Here, therefore, is one of the texts edited with the usual helps that beginners need—an introduction of twenty pages, forty pages of notes, and a Russian-English vocabulary.

*Russian Lyrics.* Edited, with Notes and Vocabulary, by J. D. Duff. (2s. 6d. net. Cambridge University Press.)

The editor has chosen twenty-five short poems, chiefly from Pushkin, Koltsov, Alexei Tolstoy, and Lermontov. The vocabulary gives all the words in the text and the notes explain everything that is likely to puzzle the beginner.

*Russian Poets and Poems: "Classics" and "Moderns."* With an Introduction on Russian Versification. By Mme N. Jarintzov. With a Preface by Jane Harrison. Vol. I: "Classics." (10s. 6d. net. Oxford: Blackwell.)

This is a book for the English reader who wishes to know something of the spirit of Russia. The poems are translated, and a biographical and critical introduction to each writer whose poems are quoted gives the reader an opportunity of understanding the origin of the poem. There are portraits.

"Oxford Russian Plain Texts."—*The Queen of Spades.* By Pushkin. (1s. net. Clarendon Press.)

Another of these useful books. Sixty-four pages of good type, with no word of English anywhere to distract the reader from the enjoyment of the story.

#### SPANISH.

*An Intermediate Spanish Reader.* By E. S. Harrison. (3s. Ginn.)

As the title implies, this is intended for students who have already some knowledge of the language. The early pieces are quite short and easy. By gradual transition the reader is taken on to considerable extracts of ordinary difficulty. There are notes, vocabulary, questions, and exercises.

#### ENGLISH.

*A Selection from the Meditations of the Emperor Marcus Aurelius Antoninus.* Translated from the Greek and annotated by J. G. Jennings. (2s. Blackie.)

Mr. Jennings has selected that part of the *Meditations* which sets forth in the strongest light the social side of the Stoic philosophy. There are numerous foot-notes, chiefly cross-references; the reader is not troubled with lengthy philosophical discussions. An interesting introduction enables the student to understand the circumstances in which the *Meditations* were written. The purport of the issue at the present time is stated in the following passage in the introduction: "The social side of the Stoic philosophy seems peculiarly suited to the needs of our modern age, when humanitarian feeling is so widely spread and is rapidly increasing, side by side with an individualism that is frequently misguided. And more especially does this social faith seem necessary as we approach the new age by which men expect the present world-conflict to be succeeded."

(1) *Scott's "Talisman":* (2) *Scott's "Ivanhoe."* Dramatized for School Use. By Maud I. Findlay. (4d. each. Milford.)

Teachers of history and also of English will welcome these little books, each running to about thirty pages. The language of the author has been retained so far as possible.

Books for the Bairns.—*Shakespeare: His Life Story Simply Told.* By John Booth. Fully and specially illustrated. (2d. net. Stead.)

A useful little book, where all that is known of Shakespeare's life is told without undue embroidery. The illustrations help the reader to understand the conditions of the theatre at the time.

*English Extracts and Exercises:* For comparative study and training in composition. By F. H. Pritchard. (2s. net. Harrap.)

Mr. Pritchard has produced a book that should prove a real help to the serious study of the English language. The passages are well chosen; they have an interest and a literary value. The exercises are varied and should prove stimulating. The work is adapted for lower and middle forms in secondary schools and for upper classes in primary schools.

*Intermediate Textbook of English Literature (Part I).* By A. J. Wyatt and W. H. Low. Revised and partly rewritten by C. M. Drennan. Third Edition. Part I, 4s. Clive.)

A scholarly and complete study of English literature up to 1660. Index, chronological table, and table of contents enable the student to find his way readily. Over four hundred pages.

## A. & C. BLACK'S FIRST (REFORM) FRENCH COURSE

Edited by

F. B. KIRKMAN, B.A. Oxon.

A New Book for Beginners in French.

### PETIT COURS PRÉPARATOIRE.

By L. H. ALTHAUS, Organising Mistress in Modern Languages to the West Riding Education Committee. A two-term course in **phonetic transcript** leading up to the **Première Année**. May be used independently. Containing Frontispiece in colours, several black-and-white illustrations and line drawings in the text. Price **1s. 8d.**

Chief features:—(1) Systematic and thorough training in the production of French sounds; (2) Vocabulary built up on the sounds as taught; (3) Intonation Exercises; (4) All the lessons have been practically tested in various classrooms during the last four to five years; (5) LESSON NOTES (supplied gratis) provide all the information necessary for the teacher; (6) If followed by the Phonetic Edition of **PREMIÈRE ANNÉE (1ère Partie)**, a full year's course in phonetic transcript is secured.

La Première Année, with Coloured Plates.

### LA PREMIÈRE ANNÉE DE FRANÇAIS

By F. B. KIRKMAN, B.A. A day passed by an English Boy in Paris. Sixty-three illustrations, of which four are in colour. Ninth Edition. Price **3s.**

New Features:—(1) Four Coloured Plates—(i) Un Cocher Parisien, (ii) Le Charmeur d'Oiseaux, (iii) Les Champs Elysées, (iv) La Seine; (2) A prefatory note containing suggestions as to the best way of using the book so as to obtain the best results.

### PREMIÈRE ANNÉE DE FRANÇAIS.

PREMIÈRE PARTIE (Phonetic Edition). Third Edition, Revised, and with the liaison of words indicated. Transcribed by Prof. D. L. SAVORY, M.A. Illustrated. With Teachers' Lesson Notes (gratis) by L. VON GLEHN. Price **10d.**

### SOIRÉES CHEZ LES PASCAL.

By F. B. KIRKMAN, B.A. A First Reading Book. Evenings with the Fairies. Five Coloured Plates. Second Edition, completely Revised. Price **10d.**

### FIRST FRENCH SONG BOOK.

By R. B. MORGAN, B.Litt. Thirty-seven Songs, of which ten are in Phonetic Script. Airs and Tonic Sol-fa. Second Edition. Price **8d.**

### COLOURED WALL PICTURES

to accompany *La Première Année de Français*. No. 1.—*La Famille Pascal à Table*. No. 2.—*La Porte Saint-Martin à Paris; a Street Scene*. Both drawn from French Models and Photographs. Measurements: 45 by 35 in. Prices: on linen, with rollers, varnished, **7s. 6d.** net each; on linen, unvarnished, **5s.** net each; unmounted, **3s.** net each. Write for post card (reproductions in colour facsimile).

All Lesson Notes for Teachers separate and gratis.

A complete list of texts, with recommended courses, will be sent on application to the Publishers.

Published by **A. & C. BLACK, Ltd.,**

4, 5, & 6 Soho Square, London, W. 1.

## HISTORY.

- The Teaching of History.* By Charles H. Jarvis. (4s. 6d. net. Clarendon Press.)

Dr. Jarvis, with many years' experience as a teacher, has come across many difficulties propounded by intending teachers of history in the Leeds Training College. Many teachers without any definite training as historians are required to teach history as part of their work. They ask: "Why should we teach history? What parts shall we select? What books should we consult? What illustrations can we use?" This book is an attempt to answer these and other problems that perplex the student who proposes to become a teacher.

- Citizenship. An Introductory Handbook.* By M. Cécile Matheson. (1s. 9d. net. Student Christian Movement.)

Miss Matheson has had a wide experience of social work, and was for some years Warden of the Birmingham Women's Settlement. The idea of the book is to arouse interest in the study of civics and to help those who desire to face their responsibilities primarily as disciples of Jesus to find connecting links between the dry world of fact and religious ideal.

- Margaret of Scotland and the Dauphin Louis. An Historical Study, based mainly on original documents preserved in the Bibliothèque Nationale.* By Louis A. Barbé. (6s. net. Blackie.)

This is a monograph designed to elucidate a chapter of history that has been previously neglected by historians. The protracted negotiations which preceded the loveless union throw considerable light upon the relations that existed between Scotland and France at the beginning of the fifteenth century.

- "Cambridge Travel Books."—*The Discovery of America, 1492-1584.* Edited by Philip F. Alexander. (3s. net. Cambridge University Press.)

This is a further volume of the series designed to illustrate the history of geographical discovery by means of accounts written either by the discoverer himself or by an eye-witness who accompanied him. The voyages selected in this volume are the first, second, and third voyages of Columbus, Gilbert's voyage, and Amadas and Barlow's voyage. There are sixteen maps and illustrations reproduced from material of the time.

## GEOGRAPHY.

- "Cambridge County Geographies."—*Bedfordshire.* By C. Gore Chambers. (1s. 6d. net. Cambridge University Press.)

The general editor of this series was fortunate in finding the late Mr. Gore Chambers to write the story of Bedfordshire. Mr. Chambers died before the proofs were corrected and the later part of the task has been completed by Mr. J. E. Morris. The book is full of interest to the dwellers in the county who want to understand the physical formation of the area, the industries, the antiquities, and the architecture.

- "Macmillan's Geographical Exercise Books."—*Key to V: Asia and Australasia.* With questions by B. C. Wallis. (2s. 6d. net. Macmillan.)

Another volume in this useful series. The work is based upon map-reading. On the page opposite each map a number of questions are given. The present volume is designed to help busy teachers who are not geographical experts and to suggest the lines that should be taken in the teaching.

## MATHEMATICS.

- A First Course in Higher Algebra.* By Helen A. Merrill and Clara E. Smith. (6s. 6d. net. Macmillan.)

This book is intended for students in American colleges. The authors feel that higher algebra must employ advanced methods and that the method that chiefly marks advanced work in analysis is that of limits. The work is accordingly based almost entirely upon limits, the proofs being made as rigorous as seems advisable for immature students.

- Harrap's Introductory Algebra.* By William Farquharson. (1s. 6d. net. Harrap.)

The early exercises are designed to show the pupils, by means of questions, the use and meaning of algebraic symbols. This Socratic method is maintained. The examples are well devised.

- The Art of Teaching Arithmetic. A Book for Class Teachers.* By Jeannie B. Thomson. (4s. 6d. Longmans.)

Most teachers in primary schools are called upon to teach arithmetic, and many are rather afraid of the subject or bored by it. If such teachers will read Miss Thomson's book they will come to their work with fresh vigour and new ideas as to the possibilities of making the children like it.

- Commercial Calculations.* By R. S. Osborne. (4s. 6d. net. Effingham Wilson.)

This book will prove a valuable aid to young men or young

women whose work involves numerical calculations. Anyone who has worked intelligently through this volume will have acquired accuracy, sound methods, and knowledge sufficient to enable him to deal with the more complicated sorts of calculations that are necessary in commercial offices.

## SCIENCE.

- Science and the Nation.* Essays by Cambridge Graduates. With an Introduction by Lord Moulton. Edited by A. C. Seward. (5s. net. Cambridge University Press.)

The editor feels that, while there is a general belief that technical education stands for prosperity, there is an equally widespread feeling that pure science is merely an academic subject. Accordingly, he collects a number of essays, each written by an acknowledged master of his subject, to show the achievements of pure science in reference to the developments of industries.

- Experimental Building Science.* Vol. I. By J. Leask Manson. (6s. net. Cambridge University Press.)

Written for advanced students in the building departments of technical schools.

- Elementary Science for Engineering Apprentices.*

By W. McBretney. (1s. Longmans.)

Covers the usual science syllabus in the second year's course of an engineering technical institute.

- A Short System of Quantitative Analysis.* For Students of Inorganic Chemistry. By R. M. Caven. (2s. Blackie.)

An abridgment of the author's "Systematic Qualitative Analysis," intended to enable the student to become a man of science as well as an analyst.

- The Tutorial Chemistry.* Part II: Metals and Physical Chemistry. By G. H. Bailey. Edited by William Briggs. Third edition. (4s. 6d. Clive.)

The whole text of this widely used book has been revised and the section on physical chemistry has been largely rewritten by H. W. Bausor.

- Electrical Laboratory Course.* For Junior Students. By Magnus Maclean. (2s. net. Blackie.)

A collection of sixty-three experiments for the use of students attending the electrical department of a technical institute.

- A Classbook of Organic Chemistry.* By J. B. Cohen. (4s. 6d. Macmillan.)

This volume deals with the newer principles of chemical analysis as applied to materials necessary to modern civilization. It is written especially for first-year medical students in Universities.

- Name This Flower.* By Gaston Bonnier. (6s. net. Dent.)

The sub-title indicates clearly the scope of the book. It runs: "A simple way of finding out the names of common plants without any previous knowledge of botany; with 372 coloured drawings representing plants to a uniform scale of one-third of their natural size, and 2,797 other figures." It is a distinct advantage that the figures should all be drawn to one scale. The "Simple Way" is fully explained, and then follow the plates, figures, and index.

- Housecraft Science.* By E. D. Griffiths. (2s. 6d. net. Methuen.)

Deals with the physics of home life: measuring, weighing, lubricating machinery, lighting, fusing, and similar matters that are capable of being established upon an experimental basis.

## HANDCRAFT.

- Manual Training: Play Problems.* Constructive Work for Boys and Girls based on the Play Interest. By William S. Marten. With Working Drawings and Illustrations. (5s. 6d. net. Macmillan.)

The "play interest" means, it may be assumed, that children should give to organized occupations in school the same concentration and singleness of purpose that they devote to their games. This book comes from America, where constructive work within the school time-table has made greater progress than with us. The illustrations and diagrams are excellent. Any boy getting hold of the book would at once want to begin to make one of the models described.

- The Complete Woodworker.* With about 900 Diagrams and Working Drawings and nearly 100 Photographs. (6s. net. Cassell.)

This is a complete manual for the worker in wood, explaining fully the use of all tools and all the processes of working in wood, including aeroplane construction. It is produced under the control of the general editor of Cassell's Handcraft Library, Mr. Bernard E. Jones; but, as the volume is the work of many writers, no single name can be placed on the title-page.

## GARDENING.

*Food Gardening.* For Beginners and Experts. By H. Valentine Davis. (6d. net. Bell.)

A practical handbook, written by a scientific gardener, for all those who are endeavouring to increase the supply of vegetables.

*Jottings of a Gentleman Gardener.* By E. T. Ellis. (3s. 6d. Reeve.)

The sub-title of this book fully explains its scope. It is: "A practical guide to flower gardening for amateur gardeners, to which are added some suggestions on growing food plants during the War." The flower garden is treated in all its aspects by an enthusiastic gardener, who has himself carried out the suggestions that are made in the book.

## STORY BOOKS.

*The Ripswayd Ring.* A Public School Story. By Richard Bird. Illustrated by H. M. Brock. (3s. 6d. net. Milford.)

A good school story for boys of about twelve years of age. The main theme is the organization of the day boys into a "House" with a corporate spirit similar to that of the boarders' houses. There is plenty of incident and a lost ring maintains a mystery until the last page.

*At All Risks.* A Boy's Adventure in the Great War. By John Finbarr. Illustrated by C. E. Brock. (3s. 6d. net. Milford.)

An English boy, under military age, finds himself with his friend, a French boy a year or so younger, in a chateau on the outbreak of war when enthusiasm and the hope of glory were at their height. The story is well written and can be safely recommended for boys of about twelve years of age.

*With Haig on the Somme.* A Story of the Great War. By Herbert Strang. Illustrated by T. H. Robinson. (3s. 6d. net. Milford.)

Mr. Strang writes in a convincing manner that brings home the actual conditions of warfare at the front and makes the reader feel that he is listening to a first-hand account of the fighting. No modern author is more successful than Mr. Strang in capturing and holding the interest of the British boy.

*With Haig on the Somme.* By D. H. Parry. Four colour plates by Archibald Webb. (3s. 6d. net. Cassell.)

It is not surprising that the title given above should be chosen by more than one writer. Mr. Parry produces a very realistic story which cannot but bring home to the reader the actual conditions at the front. A skilled German spy plays a prominent part.

*Munition Mary.* By Brenda Girvin. Illustrated by Gertrude Demain Hammond. (3s. 6d. net. Milford.)

This is a really good story that will thrill older girls. The head of a large firm of munition makers is bitterly opposed to the introduction of female labour. He decides to open a shop for fifty women workers in order to demonstrate to the country the impossibility of such employment. Needless to say, the women win.

*The Romance of King Arthur and his Knights of the Round Table.* Abridged from Malory's "Morte d'Arthur." By Alfred W. Pollard. Illustrated by Arthur Rackham. (10s. 6d. net. Macmillan.)

The story of King Arthur never fails to appeal to the chivalry of the young reader or listener. This edition is well produced in large readable type. The delightful pictures in subdued colouring add a charm to the volume.

*Next-door Neighbours.* By M. Horace Smith.

Illustrated by H. M. Brock. (1s. 3d. net. Milford.)

The children in this book are very real. In the one house they are "good," in the other house they are "naughty." The contrast and the way they react upon one another make a very good book that will be read with interest by all young people.

*Herbert Strang's Annual.* (5s. net. Milford.)

There are stories of the great war, stories of old-time fighting, stories of school life, and articles on railways and electricity. Altogether an attractive collection of readable matter by several well-known writers for boys, illustrated by many coloured plates and a large number of other pictures.

*Mrs. Strang's Annual for Children.* (3s. 6d. net. Milford.)

The embossed colour boards in which this book is bound are alone sufficient to make it attractive to young people. Added to this there is a great variety of pictures, some in colour, and a number of stories and verses written for the little ones and printed in large type that makes reading easy.

*Ver Beck's Bears in Mother Gooseland.* The new Lines by Hanna Rion, the old Lines by Mother Goose herself. (5s. net. Milford.)

The good quality of the paper used in the production of this book does full justice to the funny pictures that should delight the little ones. Old nursery rhymes, or parodies of them, are here illustrated.

*The Chunkies at the Seaside.* Drawn by Chloë Preston.

Told by May Byron. (4s. net. Milford.)

This is a funny story of the visit of the Chunkies to the seaside, printed in very large type for tiny readers and illustrated with many laughable pictures, some in colour.

*The Tiny Folk's Annual.* Edited by Mrs. Herbert Strang. (3s. 6d. net. Milford.)

A charming book for the nursery. The illustrations are very gracefully and delightfully coloured. There are numerous stories for young readers. The paper is good and will bear much handling, a useful quality in the nursery.

*Mrs. Strang's Christmas Book for Children.*

(1s. 6d. net. Milford.)

Readable stories in prose and verse, with many quaint pictures.

*Mrs. Strang's Annual for Baby.* (3s. 6d. net. Milford.)

A picture-book on very stout, almost unbendable paper, with letterpress in type so large that the tiniest learner may not shrink from it.

*The Peek-a-Boo Farmers.* Told by May Byron.

Illustrated by Chloë Preston. (3s. 6d. net. Milford.)

The Peek-a-Boos are already favourites in the nursery, and a further volume of their adventures will be welcome. The pictures will cause great amusement.

*Tommy Smith at the Zoo.* By Edmund Selous.

With eight illustrations. (1s. 9d. net. Methuen.)

Tommy Smith goes to see the animals in Regent's Park and talks freely to them all. They evince no disinclination to converse, and tell him many interesting things about themselves. The style is simple and will maintain the interest of the small reader.

## CALENDARS.

*Pitman's Yearbook and Diary for 1918.* 1s. net.

The actual diary pages, though sufficiently spaced, form but a small part of this useful volume. A large amount of information is given that will be of the greatest service to young clerks, and indeed to all men of business and teachers of commercial subjects.

*Paton's List of Schools and Tutors* (Twentieth Annual Edition). (2s. net. Paton.)

This valuable publication is, of course, primarily for the use of parents or guardians who are looking out for a school for young people; but it is not without interest to schoolmasters and schoolmistresses. The expert studies the volume to see how far his or her school is in line with other schools. The present edition is kept up to date and shows the increased fees that many schools, quite reasonably, have charged since the rise in the cost of living. Many familiar schools have been obliged to seek safer quarters inland. Cross references give in each case the new address.

*The Student's Handbook to the University and Colleges of Cambridge* (Sixteenth Edition). (6s. net. Cambridge University Press.)

Although the activity of the University has greatly lessened during the war, this necessary publication maintains its fullness of detailed information that students find it so necessary to have.

## PUBLICATIONS RECEIVED.

## EDUCATION.

*Ludus Literarius; or, The Grammar Schoole.* By John Brinsley.

Edited, with Introduction and Biographical Notes, by E. T. Campagnac. Liverpool University Press, 10s. 6d. net.

## SCIENCE MADE EASY.

## CHEMISTRY

FOR

## BEGINNERS AND SCHOOLBOYS.

SECOND EDITION, Revised and Enlarged.

By O. T. KINGZETT, F.I.C., F.O.S.,  
Past Vice-President, Society Public Analysts, &c.

No better book than this could be used in primary and public schools and by beginners generally for acquiring a knowledge of the essentials of chemistry and physics.

It is written in an interesting and entertaining style, and particular attention is paid to the practical applications of chemistry to the arts and manufactures.

A novel feature of this unique primer is the excellent glossary which forms part of it.

"An excellent little work."—*Truth*.

## MASON'S SCRIPTURE MANUALS.

IN these Manuals each chapter and verse of the Bible has been taken in order, and Questions similar to those set in the Oxford and Cambridge Local, the Pupil Teachers', and Diocesan Examinations carefully selected in every chapter, together with numerous Explanatory Notes collated from various commentaries. After each question, the answer is either given in full, or the number of the verse or verses in which it occurs.

The following Manuals are already published:—

	s.	d.
The Four Gospels ... .. each	0	9
The Acts of the Apostles ... ..	1	6
Genesis and Exodus ... ..	1	6
Joshua and Judges ... ..	1	0

# A Forgotten Chapter in The History of Education.

By J. S. THORNTON.

FRANCIS HODGSON, 89 FARRINGTON STREET, LONDON, E.C.4.  
1917.

**SIXPENCE NET.**

Vice-Chancellor M. E. SADLER:—"Your paper, with its close grasp of history and principle, has interested me very much. The old era has come to an end. What next? Your solution, or Germany's? . . ."

Dr. OTTO ANDERSEN, Professor of Education in the University of Christiania:—"Many thanks for your paper, interesting and excellently written. I see you are indefatigable in your struggle for organized liberty in English school-system."

Viscount BRYCE:—"Thank you for your pamphlet. The example of the northern countries is instructive, and not without significance for us now when there is a general rush to place everything under the State, and to suppose, like Matthew Arnold, that this means efficiency. We are almost as likely to be damaged by German examples as by German arms."

Mr. H. RAASCHOU-NIELSEN, Rektor of the Academy at Sorb:—"The papers you have sent me greatly interest me, especially the part called *Reflections, Comments, Elucidations* . . . I admire the zeal with which you go on preaching your gospel, which is charming to Scandinavian ears; and I fully agree with you in your emphasizing of the value of freedom in educational matters."

## THE COLLEGE OF PRECEPTORS

INCORPORATED BY ROYAL CHARTER

BLOOMSBURY SQUARE, LONDON, W.C.

Membership of the College is open to Teachers and to others engaged in Education.

The privileges of membership include free admission to Lectures and Meetings; the use of the Members' Room and of a large Library of educational and other books; reduction of fees payable in the case of appointments obtained through the Joint Agencies; admission to the Dividend Section of the Secondary, Technical, and University Teachers' Insurance Society; &c. Copies of "The Educational Times," the journal of the College, and of the College Calendar are sent to every member.

Full particulars may be obtained from the Secretary of the College.

Members who hold Diplomas of the College pay a lower subscription than others.

## NOTES ON CORRESPONDENCE TRAINING.

### POSSIBILITIES.

Correspondence Training places the possibility of preparation for higher qualifications before every student in the land. Preparation is given for Certificate, Preliminary Certificate, L.L.A., A.C.P., L.C.P., Froebel, Degree Examinations, Languages, Science and Art, Matriculation, Oxford and Cambridge Locals, &c., &c. These and many others are placed within reach of all by the NORMAL CORRESPONDENCE COLLEGE.

### ADVANTAGES.

Correspondence training for qualifications neither demands attendance at College for long, set hours, nor does it interfere with the pupil's work or residence. It is within the reach of all—even of those in the most far-away villages—enabling them to qualify for better appointments. The training of the NORMAL CORRESPONDENCE COLLEGE, given by an expert staff of tutors, is so clear, systematic, and thorough that success is assured to the diligent student.

### THE RESULTS.

Correspondence training for higher qualifications has enabled thousands of students, student-teachers, and teachers to obtain good appointments and promotion. More than **5,000** Distinctions and Honours have been won at Public Examinations by Pupils of the NORMAL since **1907**, and what the NORMAL has done for thousands it will do for you. The call of the future is for qualified teachers. Prepare now to improve your position by becoming a student of the NORMAL.

Write to-day for "THE NORMAL GUIDE TO SUCCESS," which will be sent free to readers of this paper.

### EXAMINATIONS FOR WHICH THE NORMAL PREPARES.

County Council Scholarships.	College of Preceptors.	Matriculation.
Pupil Teachers.	Professional Preliminary.	Degree Examination.
Preliminary Certificate.	Froebel.	Languages.
Certificate.	L.L.A.	Music.
Oxford Locals.	A.C.P. and L.C.P.	Science and Art.
Cambridge Locals.	Central Welsh Board.	Other Qualifying Exams.

Single Subjects.—A pupil may join the Normal for instruction in any single subject.

**47 Melford Road, East Dulwich, S.E. 22, and 110 Avondale Square, London, S.E. 1.**

# THE COLLEGE OF PRECEPTORS

## CERTIFICATE AND LOWER FORMS EXAMINATIONS,

### CHRISTMAS, 1917.

#### LIST OF SUCCESSFUL CANDIDATES AT THE HOME CENTRES.

The list of successful candidates at the Colonial Centres will be published in the May number of "The Educational Times."

### CERTIFICATE EXAMINATION.

[Throughout the following Lists, bracketing of names implies equality.]

The Prizes will be awarded as soon as the results of the Examination at the Colonial Centres are known. The awards will be communicated by post to the successful candidates, and a list of the awards will appear in the May number of "The Educational Times." The same number of "The Educational Times" will contain extracts from the Reports of the Examiners on the work in the several subjects of the Examination, and a list of the Candidates who obtained the First and Second Places in each Subject on Senior Papers.

### BOYS.

N.B.—The small italic letters denote Distinction in the following subjects respectively:—

<p><i>a.</i> = Arithmetic. <i>al.</i> = Algebra. <i>b.</i> = Botany. <i>bk.</i> = Book-keeping. <i>ch.</i> = Chemistry. <i>d.</i> = Drawing. <i>de.</i> = Domestic Economy.</p>	<p><i>du.</i> = Dutch. <i>e.</i> = English. <i>f.</i> = French. <i>g.</i> = Geography. <i>ge.</i> = German. <i>gm.</i> = Geometry. <i>gr.</i> = Greek.</p>	<p><i>h.</i> = History. <i>he.</i> = Hebrew. <i>i.</i> = Irish. <i>it.</i> = Italian. <i>l.</i> = Latin. <i>lo.</i> = Logic. <i>lt.</i> = Light and Heat.</p>	<p><i>m.</i> = Mechanics. <i>ma.</i> = Magnetism &amp; Electricity. <i>ms.</i> = Mensuration. <i>mu.</i> = Music. <i>p.</i> = Political Economy. <i>ph.</i> = Physiology. <i>phys.</i> = Elementary Physics.</p>	<p><i>s.</i> = Scripture. <i>sc.</i> = Elementary Science. <i>sh.</i> = Shorthand. <i>sp.</i> = Spanish. <i>ta.</i> = Tamil. <i>t.</i> = Trigonometry. <i>w.</i> = Welsh.</p>
---	--	---	--	---

The signs \* and † prefixed to names in the Junior and Preliminary Lists denote that the Candidates were entered for the Senior and Junior Grades respectively.

In the addresses, Acad. = Academy, C. or Coll. = College, Coll.S. = Collegiate School, Comm. = Commercial, Conv. = Convent, Elem. = Elementary, End. = Endowed, Found. = Foundation, H. = House, Hr. = Higher, Inst. = Institute, Int. = International, Inter. = Intermediate, Poly. = Polytechnic, Prep. = Preparatory, P.-T. = Pupil-Teachers, S. = School, Sec. = Secondary, Tech. = Technical, Univ. = University.

MEDICAL PRELIMINARY EXAMINATIONS.

The UNIVERSITY EXAMINATION POSTAL INSTITUTION

provides courses in preparation for Medical Preliminary Examinations, more particularly for the Junior and Senior Examinations of the College of Preceptors.

Full preparation in all subjects, 120 lessons, £6. Each lesson consists of very full lesson-notes, papers of questions, and answer-notes. Arrangements are also made for the provision, at a small fee, of repetition lessons in any portion of a subject in which a student is specially weak.

Prospectus and full particulars can be obtained from the Principal,

MR. E. S. WEYMOUTH, M.A., 17 Red Lion Square, London, W.C. 2.

THE COLLEGE OF PRECEPTORS will hold an

EXAMINATION FOR CERTIFICATES OF PROFICIENCY IN COMMERCIAL SUBJECTS in DECEMBER, 1918.

1918.  
**THE COLLEGE OF PRECEPTORS**  
 INCORPORATED BY ROYAL CHARTER  
 BLOOMSBURY SQUARE, LONDON, W.C.1.

**LECTURES FOR TEACHERS**  
 ON THE  
**SCIENCE, ART, AND HISTORY OF EDUCATION**  
 COURSE OF TWELVE LECTURES ON  
**PSYCHOLOGY FOR TEACHERS.**

To be delivered at The College of Preceptors, Bloomsbury Square, London, W.C.1, on Thursday evenings,  
 7 February to 21 March, and 2 May to 30 May, 1918

By **JOHN ADAMS, M.A., B.Sc., LL.D., F.C.P.,**  
 Professor of Education in the University of London.

The Course of Lectures (the First Course of the Forty-fifth Annual Series) will begin on Thursday, February 7th, at 6 p.m.

As usual, the course will be such as to prepare students for the examinations of the College in connexion with the Associateship, the Licentiate-ship, and the Fellowship, but the lectures will have a distinctly practical character, and the facts of Psychology will be so presented as to enable the teacher to apply them to the ordinary needs of the school. The work will be so arranged as to give the students an opportunity of comparing the results of their own experience with the latest results of psychological research into educational problems. The reading of the students will be guided, and problems set for their exercise. The lectures will be copiously illustrated by examples drawn from the actual experience of teachers in all kinds of schools.

**SYLLABUS.**

I. (Feb. 7.) *The Relation of Psychology to Education.*—Nature and scope of Psychology and of Education: the psychological attitude: unreasonable demands made on Psychology: subject-matter of Psychology: consciousness: the ego and non-ego: the subjective and the objective: the science of behaviour: the various departments of Psychology, and their relative importance to the educator: the "faculty" fallacy: knowing, feeling, and willing: soul, mind, and psyche: the subconscious and the unconscious with their educational applications.

II. (Feb. 14.) *Sensation and Perception.*—The five gateways of knowledge: general and special senses: distinction between sensation and perception: the implications of *meaning*: manipulation of the raw material of sensation: pure sensation: Weber's law and its applications to education: the so-called "training of the senses": relation between perception and apperception: the meaning of knowledge: the relation between knowledge and instruction.

III. (Feb. 21.) *Ideas and their Manipulation.*—Old-fashioned views on abstraction and generalization: current view of conception: the static and the dynamic aspects of ideas: mental content and presentative activity: classification of ideas according to their mode of reacting upon each other: fusion, complication, and arrest: the dynamic threshold: mediate and immediate recall: organization of ideas: the hierarchy of ideas: possibility of diminishing presentative activity.

IV. (Feb. 28.) *Attention.*—Mental focus: marginal and submarginal regions: the mechanism of attention: vascular, respiratory, and motor elements: rhythm of attention: the concentration and diffusion beats: classification of the aspects of attention: resolution into the two fundamental aspects, *nisic* and *anistic*: passage from the one to the other: motive power is *interest*: nature and manipulation of interest: distraction, the conflict of interests.

V. (March 7.) *Retention and Recall.*—The conservative element in physical and psychic life: natural or brute memory: dated and undated memory: possibility of improving the natural memory: coefficient of memory: reverie and recollection: the purposive element in recall: process of reconstruction: intensive *versus* diffused impressions: instalment system of memorizing: use and abuse of mnemonics: learning by rote: meaning of cram: obliviscence, natural and deliberate.

VI. (March 14.) *Imagination.*—Distinction between production and reproduction of mental complexes: imagination an inverted memory: different technical meanings attached to word *imagination*: unreasonably narrow meaning current in schoolwork: the creative element in imagination: essentially derivative character: the scientific *versus* the aesthetic imagination: necessary limitations of the imagination: the dangers of pictorial thinking.

VII. (March 21.) *Association.*—Rather a *post-facto* explanation of mental states: somewhat discredited at present: the laws of association, primary and secondary: convergent and divergent forms, and their treatment: manipulation of associations by means of suggestion: justification of the use of suggestion in education: possibility of auto-suggestion: pseudo-auto-suggestion: contrariant types of pupils: effect of age on power of suggestion acting on associations.

VIII. (May 2.) *Temperament.*—Physical basis of what is called *disposition*: old-fashioned classification by humours: physiologically indefensible, but has led to collection of much valuable psychological material: classification by nervous reaction: sensories and motors: introverts and extroverts: permanency of temperaments: possibility of modifying temperament by education: relation between temperament and character: individuality and personality: types and their manipulation.

IX. (May 9.) *Instinct and Habit.*—Conflicting views about the nature of instinct: the place of instinct in education: manipulation of instincts: relation of instinct to habit: the place of consciousness in the process of habit formation: the upper and the lower brain: co-ordination: accommodation: the growing point in character-forming: the dangers and the advantages of habit-forming: "to form habits is to fail": the best way to break habits.

X. (May 16.) *Intuition and Intellect.*—Bergson's view of the two directions of the spiritual force: contrast of the wasp at one end and Kant at the other: the underlying justifications of intuition: the limitations of intellect: usual meanings of *judgment*, *understanding*, *reasoning*: inevitability of conclusions from given data: practical definition of thinking: the implication of the element of purpose: *noesis* and the educational value of the view it represents.

XI. (May 23.) *Feeling and Emotion.*—Technical meaning of *affection*: discrimination of emotion from passion and sentiment: emotion and its control: mechanism of the emotions: the Lange-James and other theories: possibility of dissociating an emotion from a given complex: relation between the emotions and the instincts: the bearing of this distinction on education: the function of the emotions in spiritual life: the doctrine of elimination: the training of the emotions.

XII. (May 30.) *Conation.*—Will the active element in psychic life: relation to desire and expectation of realization of desire: the will as a resultant: popular fallacy of the will as a separate entity: insufficiency of the "choice between alternatives": nature of motives, and their relation to the will: the usual hypostatization: indecision: *aboulia*: caprice *versus* freedom: the training of the will: subjective limitations: fallacy of "breaking the will."

**FEEES FOR ADMISSION.**

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

\* \* Members of the College have free admission to the Course.

# THE EDUCATIONAL TIMES

UNIVERSITY OF ILLINOIS LIBRARY AND  
JOURNAL OF THE COLLEGE OF PRECEPTORS

Vol. LXXI No. 666

MAY 1, 1918

Published Quarterly. Price, to Non-Members, 6d.; by post, 7d. Annual Subscription, 2s.

## THE COLLEGE OF PRECEPTORS.

Incorporated by Royal Charter.  
BLOOMSBURY SQUARE, W.C.1.

### MEMBERSHIP.

Membership of the College is open, under certain conditions, to all persons engaged in education. Particulars as to the privileges of membership may be obtained from the Secretary.

### LECTURES FOR TEACHERS.

The Sixth Lecture of a Course on "Psychology for Teachers," by Professor John Adams, will be delivered on Thursday, the 2nd of May.

The Course will be helpful to those who are preparing for the Diploma Examinations of the College of Preceptors.

For Syllabus, see page 77.

### EXAMINATIONS.

**Diplomas.**—The next Examination of Teachers for the Diplomas of the College will begin on the 30th of December, 1918.

The **Summer Diploma Examination** has been discontinued.

**Practical Examination for Certificates of Ability to Teach.**—The next Practical Examination will be held in February, 1919.

**Certificate and Lower Forms Examinations.**—The Midsummer Examinations will begin on the 24th of June, 1918.

**Professional Preliminary Examinations.**—The next Examination will begin on the 3rd of September, 1918.

**Commercial Examinations.**—An Examination for Certificates of Proficiency in Commercial Subjects will be held in December, 1918.

The Regulations for the above Examinations can be obtained on application to the Secretary.

G. CHALMERS, Secretary.

## THE ASSOCIATED BOARD OF THE R.A.M. AND R.C.M.

FOR LOCAL EXAMINATIONS IN MUSIC.

Patron: HIS MAJESTY THE KING.

**LOCAL CENTRE EXAMINATIONS (Syllabus A).** Examinations in Theory held in March and November at all Centres, and in the London District and certain Provincial Centres in November-December also. Entries for the November-December Examinations close Wednesday, October 16th, 1918.

**SCHOOL EXAMINATIONS (Syllabus B).** Held throughout the British Isles three times a year, viz., June-July, October-November, and March-April. Entries for the June-July Examinations close Wednesday, May 8th (Irish entries May 1st); or, with extra fee, May 16th (Irish entries, May 9th), 1918.

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 4d. per set, per year, post free.

The Board offers annually SIX EXHIBITIONS, tenable at the R.A.M. or R.C.M. for two or three years.

Syllabuses A and B, the Syllabus in Ear Training and Sight Singing, entry forms and any further information will be sent post free on application to—

JAMES MUIR, Secretary,  
15 Bedford Square, London, W.C.1.

Telegrams: "Associa, London."

**MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS IN HIGH, SECONDARY, AND PREPARATORY SCHOOLS.**

In connexion with the London University and recognized by the Cambridge Teachers' Training Syndicate.

Principal: Miss KATHARINE L. JOHNSTON, B.A. London, M.A. Sheffield, Girton College, Moral Sciences Tripos, Cambridge Teachers' Training Certificate.

Preparation for the Teaching Diploma of the London University for the Certificate of the Cambridge Teachers' Training Syndicate and for the National Froebel Union Higher Certificate, Parts I and II.

Demonstration School attached to the College; and practice for Students in neighbouring schools under the supervision of specialists.

Tuition fees £24. A number of Scholarships from £12 to £24 offered to Students with a Degree or its equivalent. Loan Fund.

Particulars of College Hall and Registered Lodgings can be obtained from the PRINCIPAL at The Maria Grey College, Salusbury Road, Brondesbury, London, N.W. 6.

**JOINT AGENCY FOR WOMEN TEACHERS.**

OAKLEY HOUSE,

14, 16, & 18 BLOOMSBURY STREET, LONDON, W.C.1.  
Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools Association.

**THIS** Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

No Registration Fees are charged to members of the above Associations, and their Commissions are reduced.

**Hours for Interviews:**  
11.30 a.m. to 1 p.m., and 3 to 5 p.m.  
Saturdays, 11.30 a.m. to 1 p.m., and 2 to 3 p.m.  
When possible, special appointments should be arranged.

Registrar, Miss ALICE M. FOUNTAIN.

**JOINT SCHOLASTIC AGENCY.**

23 Southampton St., Bloomsbury Sq., W.C.1.

This Agency is under the direction of a Committee representing the following leading Educational Associations:—

HEAD MASTERS' CONFERENCE.  
INCORPORATED ASSOCIATION OF HEAD MASTERS.  
COLLEGE OF PRECEPTORS. /  
TEACHERS' GUILD.

ASSOCIATION OF ASSISTANT MASTERS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

Interviews by appointment from 12 noon to 1.30 p.m., and from 3 p.m. to 5 p.m.; on Saturdays, from 11 a.m. to 12.30 p.m.

A PROSPECTUS will be sent on application.

**DENMARK HILL PHYSICAL TRAINING COLLEGE AND SCHOOL OF MASSAGE.**

Training Strictly Swedish. Residential Hostel Attached. Scholarships, Value £40 and £20, Offered Annually.

The College has Open-air Gymnasium and Sports Ground. It is efficiently staffed and the Course of Training is recognized by Public Examination Boards.

For further particulars apply: Miss E. SPELMAN STANGER, Member and Examiner of the Incorporated Society of Trained Masseuses, Sunray Avenue, Herne Hill, London, S.E. 24.

THE INCORPORATED

**FROEBEL EDUCATIONAL INSTITUTE,**

Colet Gardens, Talgarth Road,  
West Kensington, London, W.14.

President and Chairman ... RIGHT HON. SIR W. MATHER, LL.D.  
Hon. Treasurer ... MR. C. G. MONTEFIORE, M.A.  
Secretary ... MR. ARTHUR G. SYMONDS, M.A.

**TRAINING COLLEGE FOR TEACHERS.**

Principal ... MISS E. LAWRENCE.

Students are trained for the Examinations of the National Froebel Union and other Examinations. Prospectuses and all particulars as to Scholarships and Loan Fund may be obtained from the PRINCIPAL.

**EXAMINATION PAPER**

AS USED BY THE

**COLLEGE OF PRECEPTORS.**

In strict accordance with the College requirements. Ruled both sides.

Packed in Beams of 480 Sheets ... per Beam, 6s. 6d.  
" " 960 " " " 13s.

**ANSWER BOOKS FOR EXAMINATIONS IN BOOK-KEEPING.**

Senior, 3 Books 10½d.; Junior, 3 Books 1/10; Preliminary, 3 Books 1/10.  
Music Paper, 2s. 6d. per 100 sheets.

(Postage extra.) Remittance should accompany Order.

F. W. SHELBORNE & CO., Wholesale and Retail Stationers,  
Telephone: Holborn 690. 63 HIGH HOLBORN, LONDON, W.C.1.

**CAREY'S "GRADUS AD PARNASSUM,"**  
WITH THE ENGLISH MEANINGS.

Revised, Corrected, and Augmented by a Member of the University of Cambridge.

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, STATIONERS' HALL, LONDON.

**THE COLLEGE OF PRECEPTORS**

will hold an

EXAMINATION FOR CERTIFICATES OF PROFICIENCY  
IN COMMERCIAL SUBJECTS IN DECEMBER, 1918.

**EDUCATIONAL AGENCY.**

(ESTABLISHED OVER 30 YEARS.)

Proprietors:—

Messrs. Griffiths, Powell & Smith.

Offices: 12 & 13 Henrietta Street, Covent Garden, London, W.C.2.

Telegraphic Address:—

Scholastique, Westrand, London."

Telephone:—7021 Gerrard.

**Scholastic.**

Head Masters and Principals of Public and Private Schools desirous of engaging qualified and well recommended English or Foreign Resident, Non-resident, or Visiting Assistant Masters, can have eligible Candidates introduced to them (free of charge) by stating their requirements to Messrs. GRIFFITHS, POWELL & SMITH.

A List of Vacancies will be forwarded on application to Graduates and other well qualified Assistant Masters seeking appointments for next term.

Schools Transferred and Valued. Partnerships arranged. No charge unless sale effected. List of Boys' and of Girls' Schools and School Partnerships for Sale, sent gratis to intending Purchasers, TO WHOM NO COMMISSION IS CHARGED.

**Assistant Mistresses.**

Head Mistresses and Principals of Public and Private Schools requiring English or Foreign Assistant Mistresses can, on application to Messrs. GRIFFITHS, POWELL & SMITH, have suitable Candidates placed in immediate communication with them free of charge.

A List of Vacancies will be forwarded to English and Foreign Assistant Mistresses and other Teachers on application. Liberal Salaries.

**BELGIAN ENGINEER,**

Over 50, with Diploma as teacher in Secondary School, speaking English fluently, with experience in an English School, desires a post as

TEACHER in MATHEMATICS or SCIENCE.

Write: A. BERTHOLET, 1 Westbourne Terrace, Cambemartin, N. Devon.

**STEYNING GRAMMAR SCHOOL.** Founded 1614. — Wanted, an ASSISTANT MASTER (ineligible) for French, History, and Shorthand. Drill and Games a recommendation. Recognized School. Apply—G. A. FLOWERS, Solicitor, Steyning, Honorary Secretary to the Governors.

**GRAMMAR SCHOOL, UCKFIELD, SUSSEX.**—In September there will be a vacancy for a MASTER to take Drawing and some other subject. Salary £170 non-res., of which £20 is war bonus. Applications to be sent to the HEAD MASTER.

**FOR DISPOSAL.**

**GIRLS' DAY SCHOOL,** with class for small boys, in London, S.W., is for disposal. 50 pupils, fees £1. 11s. 6d. to £3. 3s. per term. Established 40 years. Ill-health the reason for disposing of same.

Box 70, c.o. "Educational Times," 89 Farringdon Street, London, E.C.4.

**MRS. CURWEN'S PIANO-FORTE METHOD.**

EAR TRAINING AND SIGHT SINGING FROM SOL-FA AND STAFF.

TRAINING CLASSES for MUSIC TEACHERS are held on Saturdays and Wednesdays at Wigmore (late Bechstein) Hall Studios, Wigmore Street, by Miss SCOTT GARDNER and Miss MARGARET KNAGGS, A.R.C.M. Lessons by Correspondence may be had if desired. Address—Miss GARDNER, or Miss KNAGGS, at the Studio.

**University Tutorial College.**  
LONDON.

**LONDON MATRICULATION.**

A Morning Class works continuously throughout the Summer with the exception of the last two weeks of July. This Course includes a systematic Revision Class working both Morning and Afternoon, during the three weeks immediately preceding the September Examination.

Annually for the last twenty years about 100 Students of U.T.C. have passed London Matriculation.

Classes for the forthcoming B.Sc. (Practical and Theoretical) and B.A. (Practical) Examinations are held during the Summer Vacation, commencing Tuesday, August 6th. Classes for Beginners in Practical Sciences, commence at the same time and extend over a period of four weeks.

**PRIVATE TUITION.**  
Private tuition may be taken up at any time either during Term or in the ordinary School Vacations, in all subjects for London University and other Examinations, or for Independent Study. Fees: Eight hours, £2. 2s.; Twenty-one hours, £5. 5s.

Full particulars may be had from  
THE PRINCIPAL,  
UNIVERSITY TUTORIAL COLLEGE,  
RED LION SQUARE, HOLBORN, W.C.1.

**NORMAL**  
Corr. College.  
NORMAL CORR. COLLEGE  
(FOUNDED 1899.)  
**EXAMINATIONS**  
**FOR WHICH THE NORMAL PREPARES.**

A.C.P. and L.C.P. College of Preceptors. Professional Prelim. Froebel. L.L.A. Pupil Teachers. Preliminary Certif. Certificate. Oxford & Camb. Locals.	County Scholarships. Matriculation. Degree Examination. Hygiene. Languages. Music. Science and Art. Other Qualifying Exams.
---	---

**SEND FOR NORMAL GUIDE.**  
Cr. 8vo. 184 pages. Price 6d. net.  
**FREE.** To readers of this paper on receipt of 2d. to cover postage.

47 MELFORD ROAD, EAST DULWICH, S.E. 22.  
and 110 AVONDALE SQUARE, LONDON, S.E. 1.

**BOOKS**  
On Educational, Scientific, Medical, Law, Theological, and ALL other Subjects.  
**SECOND HAND AT HALF PRICES. NEW BOOKS AT DISCOUNT PRICES. BOOKS SENT ON APPROVAL.**  
Catalogues Free. State Wants. Books Bought.  
**W. & G. FOYLE,**  
121/123 Charing Cross Road, London, W.C.2.

Messrs.  
**TRUMAN & KNIGHTLEY,**  
LTD.

Educational Agents,  
158 to 162 OXFORD STREET,  
LONDON, W.1.

Directors:

S. A. TRUMAN.  
JAMES HEARD, B.A.  
(Trinity College, Cambridge).

Telegrams—"TUTORESS, PHONE, LONDON."  
Telephone—Museum 1136.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

**A.—EMPLOYMENT DEPARTMENT.**

- (i) ASSISTANT MASTERS & TUTORS.  
MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.
- (ii) ASSISTANT MISTRESSES.  
MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.
- (iii) LADY MATRONS AND HOUSE-KEEPERS.  
MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER OF SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers.

All communications and inquiries are treated in the strictest confidence.

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

## RECENT EDUCATIONAL PUBLICATIONS

### Social Life in Britain from the Conquest to the Reformation.

A Series of Extracts from Contemporary Writers. Compiled by G. G. COULTON, M.A., St Catharine's College, Cambridge. With 5 plates. Demy 8vo. 15s net

"It ought to be in the library of every teacher and every school, and it will afford genuine pleasure to everyone interested in the life of our ancestors."—*The Saturday Review*

"This is the ideal way to read history—the ideal way, we should say perhaps, to begin to read history. Here we have a world of contemporary evidence as to the food, clothes, religion, sport and morals of the medieval Englishman . . . A most illuminating and instructive book . . . in which scholars and lovers of literature will delight."—*The Daily News*

### Russian Lyrics.

The Russian Text, accented. Edited, with Notes and Vocabulary, by J. D. DUFF, M.A. Crown 8vo. 2s 6d net

"Of lyric poets, Russian literature can boast of a very large number . . . The editor has made a selection of twenty-five poems from the works of Pushkin, Lermontov, A. Tolstoi, Turgenev, Koltsov, Shishkov, Nadson, and Tychev, and has provided the necessary aids in the form of accents, notes, and vocabulary. The memorising of Russian verse is an excellent method of acquiring the correct Russian accent, and a student could not get better Russian verse than the selection here."—*The Secondary School Journal*

### The Book of Joshua.

In the Revised Version. Edited, with Introduction and Notes, by G. A. COOKE, D.D. Extra fcap 8vo. 2s 3d net. Cambridge Bible for Schools and Colleges

### The Book of the Prophet Isaiah, Chapters XL-LXVI.

In the Revised Version. Edited, with Introduction and Notes, by the Rev. J. SKINNER, D.D. Extra fcap 8vo. 3s 6d net. Cambridge Bible for Schools and Colleges

### Haggai, Zechariah, and Malachi.

Edited, with Introduction and Notes, by W. EMERY BARNES, D.D. Extra fcap 8vo. 2s 6d net. Cambridge Bible for Schools and Colleges

"A careful and scholarly piece of work . . . The introduction is full and interesting, including a section on Hebrew prosody and the 'alleged metrical passages' in the book. The student will certainly find here all that he needs, both in the introduction and the exegetical notes."—*The Journal of Education*

### The Epistle to the Hebrews.

Edited, with Introduction and Notes, by the Rev. A. NAIRNE, D.D. Extra fcap 8vo. 4s 6d net. Cambridge Greek Testament for Schools and Colleges

"A great commentary on *Hebrews*. . . Within the relatively brief compass of his Introduction he has dealt with all the important subjects involved. . . A very extended notice would be needed for anything like a just indication of the extraordinary merits of Dr Nairne's book."—*The Westminster Gazette*

### Shakespeare: King Richard II.

Edited, with Introduction, Brief Notes, and Glossary, by J. H. LOBBAN, M.A. With a frontispiece. Pott 8vo. 1s 3d net. Granta Shakespeare Series. The following volumes have already been published in this series:—

The Winter's Tale  
King Henry IV, part I  
King Henry IV, part II  
King Henry V  
The Merchant of Venice  
Antony and Cleopatra  
A Midsummer Night's Dream  
Much Ado About Nothing

Twelfth Night  
Julius Caesar  
The Tempest  
Cymbeline  
Coriolanus  
Macbeth

"This is a satisfactory edition, pleasant to read and to handle, with brief, scholarly introductions and notes. . . The aim of the edition is to give all that is indispensable for the intelligent enjoyment of the play." Mr Lobban has satisfactorily achieved his end."—*Modern Language Teaching*

### A Treatise on the Analytical Dynamics of Particles and Rigid Bodies.

With an Introduction to the Problem of Three Bodies. By E. T. WHITTAKER, Hon.Sc.D., F.R.S., Professor of Mathematics in the University of Edinburgh. Second edition. Large royal 8vo. 15s net

"In revising the book the author has given references to, and in some cases accounts of, the numerous original researches in dynamics which have been published by various investigators since the first edition appeared, and has added some historical matter and rewritten many of the sections, thus making the volume of exceptional value to mathematicians."—*The Glasgow Herald*

### Theory of Functions of a Complex Variable.

By A. R. FORSYTH, Sc.D., LL.D., Math.D., F.R.S., Chief Professor of Mathematics in the Imperial College of Science and Technology, London. Third edition. With 125 text-figures. Large royal 8vo. 30s net

The general plan of the book is unaltered, but a number of detailed changes have been made. Here and there some further examples have been added, and at the end of the book a set of some 200 miscellaneous examples, which have been collected from Cambridge examination papers, is given

### The Theory of Electricity.

By G. H. LIVENS, M.A., Lecturer in Mathematics in the University of Sheffield. With 104 text-figures. Large royal 8vo. 30s net

A general textbook on the mathematical aspects of modern electrical theory intended to present the complete subject in a consistent form. The treatment is based mainly on the original Faraday-Maxwell theory, generalised and extended to the case of moving systems by Sir Joseph Larmor

### A Treatise on Electricity.

By F. B. PIDDUCK, M.A., Fellow of Queen's College, Oxford. Demy 8vo. 14s net

"In this work the author has succeeded very happily in combining the mathematical and experimental sides of the subject, and, by assuming that the student already possesses a good working knowledge of the elements of electricity, he has been able to devote more space to recent developments along various lines of inquiry. It is very definitely a book for senior students, to whom it should be of great value, for it contains much information relative to recent work which is not easily to be found in collected form. . . The book can be strongly recommended for advanced students."—*The Journal of Education*

### Lecture Notes on Light.

By J. R. ECCLES, M.A., Assistant Master at Gresham's School, Holt. Crown 4to. With blank pages for diagrams, 5s net. Another edition, with 85 pages of diagrams, designed to serve mainly as a key, for the use of Masters, to the diagrams referred to in the text, 12s 6d net

"Mr Eccles, in his able summary, deals with Photometry, Velocity of Light, Reflection, Refraction, Prisms, Lenses, The Eye, Optical Instruments, Spectrum Analysis and Colour. The whole book is a marvel of lucidity in arrangement and treatment, and we cannot bestow too high praise on the reproduction of the diagrams. We can heartily recommend this book to science teachers, to students in Technical Colleges, and, in especial, to University undergraduates."—*The Educational News*

### Model Drawing, Geometrical and Perspective.

With Architectural Examples. By C. OCTAVIUS WRIGHT, Art Master's Certificate, Board of Education, and W. ARTHUR RUDD, M.A., late Scholar of St John's College, Cambridge, Assistant Masters at Abingdon School. With 310 diagrams. Large royal 8vo. 6s net

"The authors of this well produced book . . . have substituted with success in the teaching of model drawing 'architectural forms with the customary models' . . . and consequently have now dealt with the subject in this book systematically from this point of view. . . The idea is theoretically sound and is to be commended to art masters. Some of the models are exquisite."—*The Times*

### A Course of Pure Geometry,

containing a Complete Geometrical Treatment of the Properties of the Conic Sections. By E. H. ASKWIRTH, D.D., Rector of Dickleburgh, Norfolk. New edition, revised and enlarged. Demy 8vo. 7s 6d net

**ORDERS FOR SCHOOL BOOKS.** In order to ensure supplies for the Michaelmas Term, orders should, where possible, be placed with the bookseller before the end of the Summer Term

**The Educational Times.**

Until further notice, "The Educational Times" will be issued four times a year — on the 1st of February, May, August, and November. The next issue will appear on August 1st.

Communications intended for the Editor should be addressed to The College of Preceptors, Bloomsbury Square, London, W.C.1.

**A NATIONAL COUNCIL OF EDUCATION.**

THERE are sufficient indications that Mr. Fisher's Education Bill (No. 3) will shortly become law. When that takes place the most pressing educational need, from an administrative point of view, will be the re-constitution of the Board of Education.

A few considerations will demonstrate quite clearly the necessity that has arisen and how it has come about. But, first, a word must be said in reference to the genesis of the Board. When Parliamentary grants in support of education were first authorized, their distribution was placed in the hands of a Committee of the Privy Council. For many years the plan worked successfully. The Committee appointed a number of inspectors, men of dignity and learning, who visited the schools and kept the Committee informed of what was being done. "My Lords," as they were then called, attempted no direct control of the education of the country, but contented themselves with seeing that the grants were expended as Parliament intended.

Later, in a well-meant and valuable endeavour to give instruction to industrial workers, the Department of Science and Art at South Kensington was established and entrusted with Parliamentary grants. In 1899 South Kensington and Whitehall were combined

in the Board of Education, a body consisting of "a President, and of the Lord President of the Council (unless he is appointed President of the Board), His Majesty's Principal Secretaries of State, the First Commissioner of His Majesty's Treasury, and the Chancellor of His Majesty's Exchequer." It goes without saying that such a body has no special qualifications to deal with education. As a matter of fact, the Board does not meet, and does not actually exercise control over education. This control is rightly and necessarily in the hands of the President of the Board, or of the Minister of Education, as he is now usually called.

Gradually, but with increasing momentum, the problems brought before the Board for consideration and solution have been increasing in importance and widening in scope. The Board were not slow in recognizing their needs. They established a Special Inquiries Branch, a Consultative Committee, the first Teachers Registration Council, various Departmental Committees from time to time, and the Secondary School Examinations Council. Such repeated action shows clearly that the officers of the Board do not fail to realize the growing complexity of educational matters. Consider how things have changed since 1870. Then, in order to earn the Parliamentary grant, it was sufficient to show that the teacher was industrious and that Tommy Smith could read, write, and do simple calculations. To-day there is no limit to the concern of the Board for the child. His whole being comes under their consideration. If the child is under-nourished, he may be fed. Dietetics become a department of the Board's activities. Medical and dental examination and treatment require another department with expert knowledge to guide it. The preservation of the body in sound health by means of carefully chosen muscular exercises implies another branch of scientific knowledge. Bickerings between religious bodies for the possession of the child have been succeeded by a general recognition that it is the business of the school to provide opportunities for the development of the emo-

tional and spiritual side of the child's life—another expert section. The choice of subjects taught, the drawing up of time-tables, methods of teaching, and the examination of results, all of these call for scientific knowledge on the part of the administrator. The relation of education to industry and commerce, vocational training, the age at which such instruction should be begun, and many other matters are now brought to the Board for consideration. The list could be continued indefinitely. The whole nature of the child as a potential citizen is now the care of the Board of Education.

It is also to be noted that, whereas My Lords of the Privy Council dealt with public elementary schools alone, the Board of Education have now to deal with the whole education of the country—primary, secondary, and University.

In making these proposals for an enlarged Central Education Authority, no criticism is implied of the Board's work in the past. The higher officers of the Board have been men of insight, and have determined to do their best for education within the limits of their legal powers. The inspectorate, especially of recent years, has proved itself an advisory body of great value to the schools. Most of the useful work done by the Board has been done by the permanent officials, for, with the exception of Mr. Arthur Acland and the present holder of the post, the Presidents have been politicians with no great concern for or understanding of education. Mr. Fisher has shown already what can be done by a Minister of Education who understands his work and possesses the qualities of industry and enthusiasm. But no single man, whether Mr. Fisher or another, can be qualified to deal personally with all the varied problems that must come before the Minister of Education. No body of permanent officials, chosen for their administrative abilities, can deal satisfactorily with the difficult questions that are now arising, and that cannot be settled by reference to precedent. The weakness of the advisory committees that have been formed is that they have no real power.

The urgent need is that the Board of Education should be governed by a National Council of Education, which should control all education in the country, so far as control is necessary or advisable. The Minister of Education would be Chairman of Council. There would be representatives of all classes of persons especially concerned in education, administrators, politicians, employers, labour, Universities, and schools: there would be men and women who had made a profound scientific study of, and who were recognized as authorities in, educational psychology. The Council should include persons who could give authoritative direction on all matters relating to child welfare. Sectional committees would be established. Thus would the officials of the Board have always at their command the best scientific knowledge available on any subject with which the Board might be called upon to deal.

The main thing to be dreaded at this moment in English education is the tendency to rigid administrative control. This National Council would be able to keep administrative officialism within due bounds.

## NOTES.

*The Education Bill.* THE Committee stage of the Education Bill, which should have been reached by the middle of last month, was postponed on account of the Man-Power Bill, and had not taken place at the time that these notes were written. The indications point to the acceptance of the Bill with the modifications that the Government have introduced. But there are still signs of active opposition from districts which claim that compulsory education up to the age of eighteen will "dislocate industry." If, as seems probable, the temper of Parliament is in favour of maintaining a control over boy and girl adolescents until the age of eighteen is reached, industry will be obliged to adapt itself to the new conditions. Labour and Capital are still mutually suspicious, and the Workers' Education Association is absolutely opposed to continuation schools carried on by manufacturers. There may be grounds for this attitude, but it is certainly unfortunate. There are obvious advantages in the establishment of a special school for the young operatives in a large factory. The time, the curriculum, and the place can be made more easily to fit the convenience of the workers. But the W.E.A. insists upon State schools for everyone, and no doubt that will be the solution.

*Evil of Compulsion.* ON all sides the Education Bill is welcomed as a new charter of liberty. The criticism expressed has been directed chiefly against administrative detail, or else it has come from interested employers fearful for the wages bill. Mr. Fisher's views appear to be so enlightened, his enthusiasm so unbounded, and his good will towards the workers so unquestioned, that one might well hesitate to add further criticism and so appear to be on the side of the reactionaries. Yet, in our opinion, there is a blot on the Bill—a blot that appears to have been politely ignored in all quarters. The blot lies in the principle of compulsion. If the nation is willing, compulsion is not needed; if the nation is not willing, compulsion will defeat the objects of the Bill. Far better would it be to make secondary education free up to the age of sixteen or to provide an immense number of scholarships. The principle of compulsion is wrong. Those who are compelled against their will to enter the continuation schools will get little benefit and, on the other hand, they will spoil the spirit of the schools for the willing workers.

"Better England free than England sober," an Anglican bishop is reported to have said. Better England ignorant than England educated against its will in State education factories.

**Private Effort.** Mr. ACLAND, speaking on the Second Reading of the Education Bill, said that "they wanted to bring the private schools of all classes, rich and poor, under the effective supervision of the Board of Education." We hold that, for public convenience and for administrative purposes, it is necessary that private schools should be known, listed, and officially recognized. At present few local education authorities, in considering the educational needs of the area, take account of private schools. This is wrong, and ought to be rectified. But if Mr. Acland means that all private schools should be controlled by the Board of Education in the suffocating bonds that daily grow tighter round the arteries of State-aided schools, he is expressing a point of view that should be combated by all who understand the vital need for freedom in education. At a time when we have all agreed to condemn the German methods of educational administration, the Board of Education, by one enactment after another, are rapidly approaching to the German ideal in which every teacher in every school is controlled by departmental regulation. There has never been a time when it was more necessary than it is at the present moment for the College of Preceptors to raise its voice in defence of personal freedom and liberty in education.

**Universities and Life.** THE aim of a University is the pursuit of "pure" knowledge: this is generally conceded. Yet the Universities have not hesitated to apply the pure knowledge that is their aim to the practical purposes of life in many directions. Applied mathematics and applied science are used in the building of bridges, ships, and guns, and in the manufacture of foods and other commodities. In industries the Universities play their part as a factor in national life; "business men" and, nowadays, Government departments as well, do not hesitate to refer to the man of "pure science" for help and information in practical matters. But industry does not cover life, any more than the Science Faculty represents a University. Prof. Findlay has contributed to a recent number of *The New Statesman* an interesting article, in which he argues that the Faculties of Arts have an equal duty to the nation, and that they must no longer stand aloof from the marketplace. "The face of things," he says, "is changing before our very eyes, and the time has come for the University to step boldly into the arena and offer itself for national service. . . . For the world needs the reflective spirit, the meditations of the philosopher, the search into the past; it asks only that the scholar

shall emerge and shall apply the fruits of his learning to the problems of his day and generation."

THE Report of the Committee appointed by the Prime Minister to inquire into the position of natural science in the educational system of Great Britain covers the whole ground and goes into full detail with regard to every grade of teaching institution. It should be studied carefully by all who are interested in the changes that are coming over the spirit of education. In the past the schools have in the main set out to teach thought as expressed in language. The training in science that the pupils received was obtained mainly through the medium of the study of grammar. History and literature will always remain worthy subjects of study; and it will always be necessary to acquire a proper control over the use of one's own language as a means of the expression of thought. But the progress of knowledge in the fields of natural science and the continued application of that knowledge to the affairs of life have made it necessary that all children must be taught how to study the concrete things that surround them. The difficulties of time and time-table will be readily solved. The waste of time that exists at present is due to the unavailing effort to make children learn what they do not want to learn at the moment. When the right subjects are introduced at the right time, children will absorb knowledge as a cat laps up milk: there will be no delay. At the same time we must avoid worshipping science alone, as the humanities alone have been worshipped in the past.

**The Status of the Teacher.** THE Report of the Science Committee lays great stress on the status and the training of the teacher. One of the general conclusions is "that real progress in education depends on a revolution in the public attitude towards the salaries of teachers and the importance of their training." Again: "It is essential that salaries and prospects of teachers in secondary schools should be substantially improved and a national pension scheme provided" and "a full year's training shared between school and University is necessary for all teachers in secondary schools." The conversion to a recognition of the value of professional training on the part of the men who formed this Committee is remarkable. Twenty years ago those who advocated training for teachers in secondary schools seemed to be crying aloud in the wilderness with none to hear. Not less important is the authoritative statement that salaries must increase. In the past, among the great ones in education, the feeling was that any man worth his salt gained either a head mastership or a house mastership and was thus compensated for the lean years of his apprenticeship. Things have now changed

and the national need has arisen for many thousands of teachers who must remain throughout their careers assistant masters and who must continue, for the sake of the nation, to do faithful work in that capacity.

MR. FISHER'S pledge to a deputation of the Miners' Federation, that he had no intention of allowing anything in the nature of military training in schools, will be

*Militarism in Schools.*

welcomed by many people. Seeing the undoubted increase in physical fitness that comes to the recruit after six months' military training, thoughtless persons have cried: "Give everybody military training; begin with young children and carry it on throughout the proposed period of continuation education in which Mr. Fisher lays great stress on physical training." What the future has in store for us we cannot foresee. Whether this war will be the last of European wars, or whether every nation will need to keep up an armed force of all its citizens, we cannot yet know. But we can foresee the harm that the introduction of the military spirit into school would work, and we do know the worthlessness of training boys of twelve to be soldiers. It would be as reasonable to say that the future chimney sweep should begin practising on toy chimneys in the kindergarten. We need to increase bodily health by physical exercises suitable to the age of the children in order that each individual may be healthy and strong, both for his own sake and the sake of the nation. That physical fitness can be used in war if, unhappily, war should remain with us. But the primary object of physical training is not to produce soldiers.

THE Board of Education have taken a wise step in abolishing the pledge that students in elementary training colleges have been called upon to give. Hitherto

*A Wise Step.*

such students have undertaken to teach in a public elementary school in return for the money that the State has expended upon their training. Under the new regulation the student must undertake to teach in an "approved school" and the Board will accept teaching service in any "approved" teaching institution of whatever grade. Thus by a simple stroke of the pen the Board have abolished the technical difference between elementary and secondary teachers. This distinction has been, of course, purely social, and many teachers after their necessary years of service in an elementary school, have entered secondary schools. In future the term "Elementary Training College" will have lost its significance; the institution will become a "Teachers' Training College," and its students may enter institutions of primary, secondary, or tertiary grade, according to their taste and opportunities. As a set-off to the recent reactionary enactments of the Board, we especially welcome this sign of recognition of the democratic spirit.

THE leading article entitled "Passengers" which appeared in a recent number of *The Times Educational Supplement* is remarkable in a newspaper. It is also significant, as was the series of articles signed "A. C. B." *The Times* does not hesitate to deal with the higher planes of educational thought. On these matters there has been what almost amounts to a conspiracy of silence; of course, was the feeling, we assume that everybody has noble thoughts, but it is poor taste to refer to them. The article begins: "Much education is unconsciously directed towards removing the passion for excellence." Such a statement compels thought, and the deeper the thought the more the truth of the statement is recognized. Too often a schoolmaster has shrunk from vital experiences; too often he has failed to gain excellence. He is fearful for his pupils. Keep them in bounds, keep them out of danger, is his feeling. One never knows. I have failed to reach the grapes. Probably they are sour. Best prevent the boys from striving after them. And yet, as the writer of the article points out, all progress is the result of the desire for excellence. One of the favourite phrases of the schoolmaster, says the article is "play the game"; "but that is exactly what they are not doing. The game is played by those dangerous and disconcerting people to whom life is neither a game nor a compromise, but the satisfaction of a spiritual appetite."

FANTINE—FILLETTE.

By MARION CAHILL.

I.

FANTINE is a demure twelve in a little belted tunic with a bright scarlet bow on her curly head. She will tell you that she is *tout-à-fait sérieuse, très chic, et très comme-il-faut.*

"Yesterday I went to the kinema, me, and I amused myself well, but very well indeed!"

"What did you see?" I asked.

"Ah, Mademoiselle," she cried, clasping her hands. "I saw Max Linder. *Quel homme! Je l'adore! So smart, en bonne tenue!*"

The last person in the world, I should have thought, that would appeal to a twelve-year-old child. Max is the typical *flâneur* of the boulevards, much beloved of the Parisians.

"He made love to a so beautiful lady," Fantine continued. "An 'er 'usban' came in. Oh, la, la! *Quel dévouement!* Maman said to me: 'Soon we shall find thee a husband, my little pigeon,' and I said '*Dieu merci!* Not one like Max, *j'espère.*'"

There was a pause, and I looked thoughtfully in Fantine's bright little face. She is not so precocious as she sounds; she has been brought up among her elders, and has adopted woman-of-the-world airs almost unconsciously.

She sighed.

"It must be that I have a husband. Maman will find him; it will then remain for me to marry him. Ah! I shall be glad to be Madame. No one to say 'Fantine, do dis,' or 'Fantine, do dat.' And as many boubons as I like. No one to say '*Chérie*, thou wilt be ill if thou eatest any more.' I shall be as ill as I choose, when I shall be Madame."

"What else did you see at the kinema?"

"I saw Sharlie Shaplin," she continued gaily, "wiz 'is big, big boots an' 'is little, little 'at, and oh such a *drôle pantalon!*"

He is an English, Mademoiselle. Are there many English *comme ça ?*"

"I have not met any," I answered gravely. "I imagine he is unique."

"C'est un chic type!" said Fantine wistfully.

I searched my brain for the unaccustomed names of kinema stars, and could only think of Mary Pickford.

"Have you seen Mary Pickford?" I asked Fantine.

"Elle est trop ingénue," said Fantine, with a little worldly air. "Impossible to be so *ingénue* as that one there."

And I realized that Mary Pickfords do not grow in Parisian soil.

## II.

Fantine was very busy looking at her smiling little face in a hand-mirror. I was reminded of an old French song with the rapturous refrain, running through innumerable verses, of "Suis-je, suis-je, suis-je belle?" She put down the mirror and looked at me earnestly.

"I find," she said, gravely, "that I have no complexion. Mine is *mat*, and I would like to be pink, like a beautiful pink rose. *Mais que voulez-vous ?* One must resign oneself to the wishes of *le bon Dieu*. He does not wish it; *c'est tout*."

The French have a delightful habit of confiding everything to *le bon Dieu*, even their little vanities. They speak to Him, as one would speak to a natural father, with complete trustfulness.

"I wonder why He made me *mat*, when He knew I should like to be pink," continued Fantine. "And I would not do as Lysianne does. She gets her complexion out of a box—oh! so many little pots and boxes and pencils and brushes."

Now, I had marvelled often at the exquisite beauty of Lysianne's complexion. It was notable among girls whose strong point is not their complexion. And I was amazed at the information Fantine, all unwittingly, was imparting. And I was glad to think that Fantine, when she arrived at the age of Lysianne, would scorn the use of cosmetics.

I intimated as much.

But Fantine is not French for nothing. "It is too expensive," she said simply.

## III.

In a fairly large school, it is not uncommon to find a sprinkling of younger ones. These see a great deal of their elder companions, to whom they often prove troublesome; though the older girls generally "mother" them, and are exceedingly good to them.

Fantine goes to her "mother" for everything. Unburdened by the weight of gratitude for favours received, she turns her critical eye on her patroness and makes her own deductions with unflinching acumen.

"Why do you wear *petits chiens*?" she said curiously. Parisians call a "fringe" *petits chiens*—expressive phrase. "*Ce n'est pas la mode!*"

Lisette replies, "Because it suits me."

Fantine puts up her hand, pushes back the fringe, and gazes earnestly into Lisette's face.

"Vous avez raison," she says seriously. And to her bosom friend she says afterwards: "*Comme elle est laide* without the *petits chiens*. But she is wise, that one, not to follow *la mode*."

## IV.

Fantine is no lover of walking. She drags one languid foot after the other in the daily walk; she grows peevish and *distraite*. She likes to play in the garden like a *gamine*, and to make herself so black that she needs a bath before she can go to class.

And when it rains, instead of making haste, her feet move more and more slowly.

One day a sudden downpour sent them all helter-skelter home as fast as they could run. Everybody ran except Fantine.

"Dépêchez-vous, Fantine. Courez vite. Vous serez trempée comme une soupe."

"I am making haste," said Fantine wearily.

"But thou art not! See thy feet; they do not move."

Marthe was very tall, with feet in proportion. Fantine fixed her eyes on these feet.

"Thou canst not expect me to progress like thee. I have not thy great feet."

## V.

One afternoon Fantine sat buried in thought. There was a deep line between her eyebrows. She frowned on all the world. Presently she sighed.

"What is it, Fantine?"

"I find life so sad. There are so many strange things."

"What is troubling you now?"

"Many, many things. I find that papa does not speak the truth. It is sad for a child to have an untruthful parent."

She propped her chin on her hands. "One day I said to papa, 'Papa, tell me how I arrived to this world.' And papa said, '*Mon ange*, I found thee among the cabbages.' We lived in the country in those days; there were many cabbages. So perhaps it was true. And now a little brother has arrived *chez nous*. And I said, 'But, papa, where then did you find him?' And he said, 'Among the cabbages.' Now I ask you, mademoiselle, do cabbages grow in Paris?"

## VI.

Fantine adores her grandfather, and it is no exaggeration to say that he adores her. Fantine had to go home for the week-end on purpose to keep the *fête*-day of grandpapa. When he heard that she might be absent, he wept so bitterly that Fantine was sent for at once.

She had a gay little frock for the occasion, and a bigger bow than ever on her bright hair. She returned to school after the *fête*, and for several days was rather subdued.

"Mademoiselle," she said to me at last, "I do not understand *le bon Dieu*, although I love Him. Sometimes everything is wrong just because of one little, little thing that the good God could put right so easily."

"What do you want Him to put right now?" I asked gently.

"Dear mademoiselle, listen. You know I went home for grandpapa's *fête*. There was a great feast, everything that is good. And everybody ate except grandpapa."

"Why, was he ill?"

"He has only two teeth, Mademoiselle."

"But many old people have only two teeth."

"But these two teeth do not meet, Mademoiselle. One is above and one is below. It would have been so easy for *le bon Dieu* to make them meet."

## VII.

Grandpapa fought in 1870, and Fantine knows all about that disastrous campaign. Only to mention it makes the French child of to-day quiver from head to foot. Horrors were perpetrated then by the enemy in France such as we have grown all too accustomed to hear in these momentous days. The English do not know what *La Revanche* means to the French. The very thought of it has bitten deep into their hearts. It has become a sacred trust handed down to the present generation. They must avenge the death of their grand-sires. The present War has, through its amazing causes and circumstances, assumed the proportions of a Crusade. In very truth, it is a *sainte guerre*. The oriflamme has been removed from St. Denis to the great basilica of the Sacré Cœur on Montmartre. Those who know the meaning of symbols to the French will realize the significance of this act, which is already part of French history.

So for grandpapa's *fête* Fantine had prepared a recitation. It may be imagined with what quivering nerves the old campaigner of '70 heard this youthful, dearest descendant of his speak in eager, loving, impetuous tones of "Le Drapeau."

It would be no exaggeration to say that there were few dry eyes when the slender, childish little figure in the centre of that happy family reunion stood forth and said:

Le Drapeau, mes amis, ce sont les trois couleurs  
Qui portent nos espoirs et veillent nos douleurs. . . .  
C'est tout votre passé, l'enfance, la jeunesse,  
Le premier désir et la première tendresse. . . .  
Incline-toi, Drapeau, au seuil de l'avenir,  
Devant ceux, qui, pour toi, n'ont pas craint de mourir.

# NORMAL NORMAL

## NORMAL CORRESPONDENCE COLLEGE.

THE EFFICIENT AND SUCCESSFUL CORRESPONDENCE COLLEGE.  
(FOUNDED 1889.)

**RESULTS NOW ISSUED.**

# A.C.P. and L.C.P.

In all parts of the Kingdom Pupils of the Normal have passed A.C.P. & L.C.P.

### Some Typical Testimonials.

Bryn Tawel, Cross Park,  
Pembroke Dock.  
February 2nd, 1918.

Dear Sir,  
I am glad to say that I obtained Four Honours (Geography, Arithmetic, Algebra, and Geometry) at the recent A.C.P. Examination. I wish to thank you for your tuition and the very great interest in my work which gave me my success.

I am, yours faithfully,  
B. J. CHUBB.

(Honours in 4 subjects.)

Arranmore (2) Nat. School,  
Burtonport.  
February 3rd, 1918.

Sir,  
I have to inform you that I passed the recent L.C.P. Examination, obtaining Honours (First Place) in Irish.

Your notes on Education and Astronomy were very good. In the latter subject practically all the questions set had been anticipated and answered in your papers.

Yours faithfully,  
P. MURRAY.

7 Chambers Lane,  
Willesden Green, N.W.  
January 30th, 1918.

Dear Sir,  
I am very glad to say I have been successful at the recent A.C.P. Examination. I must thank you very much for the great help your course has been to me, several questions being very similar to those set in your course.

Again looking forward to your valuable help,  
Yours faithfully,  
JOHN F. BAYLISS.

8 Alfearn Road,  
Lower Clapton, N.E.  
April 16th, 1918.

Dear Sirs,  
I am sure you will be pleased to hear that I have been successful in my A.C.P. Examination, with Honours in five subjects (English, Geography, History, Arithmetic, and Algebra).

My success is due largely to your excellent tuition, and I do so wish I could sufficiently express my thanks to you.

To anyone needing help I shall take great pleasure in recommending the Normal Correspondence College.

Very faithfully yours,  
RICHARD J. M. LEWIN.

(Honours in 5 subjects.)

Scugger House,  
Carlisle.  
January 31st, 1918.

Dear Sir,  
I am happy to tell you that I have received the result of the A.C.P. Examination and find that I have passed and so qualified for the Diploma. I shall be everlastingly thankful to the fates which prompted me to join the Normal and take the Examination.

I have found your papers very valuable.

Yours sincerely,  
MARIA GILL.

6 Osborne Road, Nether Edge,  
Sheffield.  
February 1st, 1918.

Dear Sir,  
I have passed in the two subjects which I entered for, and so have completed the examination (A.C.P.).

I have found your notes and questions a great help, and am very pleased I have passed.

I have to thank you for your valuable tuition, as I found your notes particularly helpful.

Yours faithfully,  
H. KAY.

# TEXT-BOOKS ON EDUCATION AND PHILOSOPHY.

**Teaching, Principles and Methods of.** By JAMES WELTON, D.Lit., M.A. *Second Edition, Revised and Enlarged.* 6s. 6d.  
 "A well written and full presentation of the best educational methods of the time. We commend this suggestive and very helpful volume."—*Schoolmaster*.

**Moral Training, Principles and Methods of, with Special Reference to School Discipline.** By JAMES WELTON, D.Lit., M.A., and F. G. BLANDFORD, M.A. 4s.  
 "A succinct and well-reasoned exposition, both theoretical and practical, of the ethics of school discipline."—*Scotman*.

**Experimental Psychology, An Introduction to, in Relation to Education.** By C. W. VALENTINE, D.Phil., M.A., Professor of Education in the Queen's University, Belfast. 3s.  
 "We shall be able to refer teachers to Prof. Valentine's book with perfect confidence that they will get just what they desire and what they need."  
*Educational Times*.

**Psychology, The Fundamentals of.** By BENJAMIN DUMVILLE, M.A., F.C.P. 5s.  
 "A very plain, understandable outline of modern Psychology."  
*London Teacher*.

**Child Mind, An Introduction to Psychology for Teachers.** By BENJAMIN DUMVILLE, M.A., F.C.P. 3s.  
 "A very clear statement of the nature and development of child mind."  
*Educational News*.

**The Teaching of Drawing: Its Aims and Methods.** By SOLOMON POLAK and H. C. QUILTER. 3s.  
 "It is quite practical, full of valuable suggestions, and, above all, knows the difficulties which have to be met in the drawing lesson."—*London Teacher*.

**Physical Education and Hygiene, Principles and Methods of.** By W. P. WRIPPTON, B.Sc. With a Sketch of the History of Physical Education by JAMES WELTON, D.Lit., M.A. 5s.  
 "A comprehensive and well-balanced treatise."—*Oxford Magazine*.

**Teaching, Its Nature and Varieties.** By BENJAMIN DUMVILLE, M.A., F.C.P. 5s.  
 "Very helpful and suggestive. . . It is a distinctly hopeful sign for the future of education that books such as this, which insist on the importance of a scientific system, are now frequently making their appearance."—*Bookseller*.

**Hygiene for Teachers, Text-book of.** By R. A. LYSTER, M.D., Ch.B., B.Sc. (Lond.), D.P.H., B.Sc. (Public Health). 5s.  
 "It is a thoroughly practical work, sound and lucid."—*Educational Times*.

**School Gardening, with a Guide to Horticulture.** By ALBERT HOSKING, Lecturer in Horticulture and Chief Supervisor of School Gardens, West of Scotland Agricultural College. With numerous Illustrations and Plans. 3s.  
 "On the subject of School Gardens the author can speak with a full experience, and his practical details throughout are thoroughly to the point."—*Nature*.

**School Organization.** By S. E. BRAY, M.A. With an Introduction on "The Place of the Elementary School in a National System of Education," by Sir JAMES YOXALL. *Second Edition.* 3s. 6d.  
 "We can heartily recommend the treatise."—*The Journal of Education*.

**The Edgeworths: A Study in Eighteenth-century Education.** By A. PATERSON, Ph.D., M.A., Lecturer in Education in the University College of North Wales. 1s. 9d.  
 "The author gives us a most complete and satisfactory account of a neglected period of educational history. . . The handling of the subject is good."  
*Educational News*.

**Ethics, A Manual of.** By J. S. MACKENZIE, Litt.D., M.A., Examiner in the Universities of Cambridge and Aberdeen. *Fifth Edition, Enlarged.* 7s. 6d.  
 "The volume is a thorough and independent discussion of moral science and philosophy. Each of the chapters is written with great care, and with a freshness and originality that take the work quite out of the category of the ordinary text-book."—*The Journal of Education*.

**Logic, Intermediate.** By JAMES WELTON, D.Lit., M.A., and A. J. MONAHAN, M.A. With Questions and Exercises. 8s. 6d.  
 "This admirable manual will be welcomed by all students of mental science. The names of the joint authors are sufficient guarantee of the excellence and reliability of the matter."—*Schoolmaster*.

**Logic, Groundwork of.** By JAMES WELTON, D.Lit., M.A. 4s.  
 Suitable for London Matriculation and similar Examinations.

**Psychology, A Manual of.** By G. F. STOUT, LL.D., M.A., Fellow of the British Academy, Professor of Logic and Metaphysics in the University of St. Andrews. *Third Edition, Revised and Enlarged.* 9s. 6d.  
 "The Manual is now the best of the very few good books on Psychology that have been written in modern times."—*Mind*.

**Psychology, The Groundwork of.** By Prof. G. F. STOUT. 5s.  
 "All students of philosophy, both beginners and those who would describe themselves as 'advanced,' will do well to 'read, mark, learn, and inwardly digest' this book."—*Oxford Magazine*.

Clifford William Towilson.

## THE COLLEGE OF PRECEPTORS.

## PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH.

The following candidates were successful at the Examination held in February, 1918:—

## CLASS I.

Jones, Clara.	MacFarlane, Peter Barbour.
---------------	----------------------------

## CLASS II

Loftus, Patrick.	Parnell, Gladys Mary.
------------------	-----------------------

## THE COLLEGE OF PRECEPTORS.

## PROFESSIONAL PRELIMINARY EXAMINATION. — MARCH, 1918.

## PASS LIST.

The Examination was held on the 5th, 6th, and 7th of March in London and at eleven other local centres viz., Birmingham, Blackburn, Bristol, Cardiff, Edinburgh, Glasgow, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, Nottingham. The following candidates obtained Certificates:—

## SENIOR.

## Pass Division.

Bennett, M. <i>a.</i>	Gask, R. C.
Foot, R. R. <i>f.ch.</i>	Walker, H. F. <i>a.ch.</i>

## JUNIOR.

## Honours Division.

Cassels, Miss M. C. <i>e.h.f.phys.</i>	Hamilton, H. <i>a.</i>	Jeffery, J. W.	Newnham, F. M. <i>a.f.l.</i>
Goodson, S. W. <i>a.</i>	Hawksley, Miss L. M. <i>e.h.a.f.</i>	Key, L. A. <i>a.</i>	Wrigley, K. G. <i>a.al.</i>

## Pass Division.

Aked, Miss E. <i>e.</i>	Gray, H. P.	Martin, H. W. <i>a.</i>	Raine, A. <i>a.</i>
Boetius, F. R.	Hamer, Miss A. G.	Martin, W. <i>a.</i>	Royal, S. E.
Broad, Miss D. M.	Handscorn, C. R. <i>a.</i>	Matthews, W. A.	Smith, V. R.
Broadhurst, A. B.	Hawke, M.	McDermott, Miss I. <i>h.</i>	Threlfall, J. H.
Caplan, S.	Hogben, B. T. <i>a.ch.</i>	McNee, E.	Tweed, R. D.
Davis, B.	Holt, R. H. <i>a.l.</i>	Morgan, Miss G. V.	Umney, A. N. F. C.
Dean, Miss E. M.	Horwich, Miss S.	Newland, E. S.	Walker, T. de L. <i>f.l.</i>
de Souza, G. A. <i>f.</i>	Hougham, E.	Nicholl, C. H.	Watson, A. A.
Dunn, Miss F. A.	Jones, B.	Paine, Miss D. M.	Williams, H. C. M.
Dunn, Miss L.	Jones, W. H. G. <i>phys.</i>	Painter, Miss R. M.	Williams, J. A. H.
Edwards, D. R. <i>a.</i>	Kempster, G. B. <i>ch.</i>	Pearce, Miss E. M. <i>e.</i>	Wilson, A. C.
Ellingham, G. H. <i>a.</i>	Larrad, J. H. <i>a.</i>	Pedley, V. G.	Wright, B. <i>a.</i>
Evans, J. <i>a.</i>	Leibowitz, Miss A.	Platts, Miss D. A.	Wurm, A. L.
Gilmore, Miss E. M. <i>h.ch.</i>	Leyshon, H. M. E. <i>l.</i>	Pratelli, C. J.	
Glaister, W. <i>a.</i>	Longhurst, G. B.	Pratt, Miss D. <i>f.ch.</i>	
Goodbody, T. E.	Macaulay, K. B. J. <i>e.</i>	Quinn, C. A. <i>a.</i>	

N.B.—The small italic letters denote distinction in the following subjects respectively:—

*a.* = Arithmetic.  
*al.* = Algebra.  
*ch.* = Chemistry.

*e.* = English.  
*f.* = French.  
*h.* = History.

*l.* = Latin.  
*phys.* = Elementary Physics.

# THE COLLEGE OF PRECEPTORS.

## CERTIFICATE AND LOWER FORMS EXAMINATIONS,

### CHRISTMAS, 1917.

#### PRIZES.

##### SENIOR.

###### General Proficiency.

1. Arnold, H. G. (Iobister Prize.) Norwich High School for Boys.
2. Cutler, D. G. S. (Pinches Prize.) The High School for Boys, Croydon.
3. Goldstein, S. (Hodgson Prize.) Argyle House, Sunderland.
4. Aufenast, W. Tollington School, Muswell Hill.

###### English Subjects.

1. Goldstein, S. Argyle House, Sunderland.
2. Taylor, Miss P. M. Penketh School, Nr. Warrington.

###### Mathematics.

1. Cutler, D. G. S. The High School for Boys, Croydon.
2. Holbrook, R. P. Shoreham Grammar School.

###### Natural Sciences.

1. Baully, C. J. Tollington School, Muswell Hill.
2. Aufenast, W. Tollington School, Muswell Hill.

###### "Taylor-Jones" Prize for Scripture History.

- Carrol, W. D. Wesleyan Boys' High School, Bathurst, Gambia.

###### Eve Silver Medal for Proficiency in German.

- Wichmann, R. E. L. Tollington School, Muswell Hill.

###### "Miss Mears" Prize for Domestic Economy.

- Scatcherd, Miss M. St. Hilda's School, Sneaton Castle, Whitby.

##### JUNIOR.

###### General Proficiency.

1. Everett, L. W. Norwich High School for Boys.
2. Hirschfeld, L. Tollington School, Muswell Hill.
3. Mourant, A. E. The Jersey Modern School, St. Helier's.
4. { Large, G. C. Shoreham Grammar School.  
Low, W. N. E. B. Linton House School, Holland Park Avenue, W.

###### "Soames" Prize for Scripture History.

- Low, W. N. E. B. Linton House School, Holland Park Avenue, W.

##### PRELIMINARY.

###### General Proficiency.

1. Cathcart, C. E. Newquay College, Cornwall.
2. Sharkey, O. T. B. Norwich High School for Boys.
3. Du Val, H. S. Harleston House, St. Lawrence, Jersey.
4. { Bashford, R. C. Shoreham Grammar School.  
Collins, L. J. Tudor Hall, Hawkhurst.

#### List of the Candidates who obtained the FIRST and SECOND PLACES in each Subject on SENIOR PAPERS.

##### Scripture History.

1. Carrol, W. D. Wesleyan Boys' High School, Bathurst.
2. Arnold, H. G. Norwich High School for Boys.

##### English Language.

1. Goldstein, S. Argyle House, Sunderland.
2. Stark, Miss D. L. Crouch End High School and College, N.

##### English History.

1. { Cohen, G. Christian Brothers' College, Kimberley.  
Pearless, Miss B. Felthorpe, Hampton-on-Thames.  
Eban, W. T. H. Private tuition.  
Sagar, A. B. Christian Brothers' College, Kimberley.

##### Geography.

1. Jessop, A. Penketh School.

##### Arithmetic.

1. { Arnold, H. G. Norwich High School for Boys.  
Goldstein, S. Argyle House, Sunderland.  
Mout, S. Shoreham Grammar School.  
Weinberg, N. Christian Brothers' College, Kimberley.

##### Algebra.

1. { Arnold, H. G. Norwich High School for Boys.  
Holbrook, R. P. Shoreham Grammar School.

##### Geometry.

1. Goldstein, S. Argyle House, Sunderland.
2. Blake, W. D. Kent Coast College, Herne Bay.
3. Cutler, D. G. S. The High Sch. for Boys, Croydon.

##### Trigonometry.

1. Cutler, D. G. S. The High Sch. for Boys, Croydon.
2. Inch, J. V. Shoreham Grammar School.

##### Mechanics.

1. Goldstein, S. Argyle House, Sunderland.
2. Cutler, D. G. S. The High School for Boys, Croydon.

##### Book-keeping.

1. { Henman, F. E. Shoreham Grammar School.  
Inch, J. V. Shoreham Grammar School.

##### Mensuration.

1. Arnold, H. G. Norwich High School for Boys.
2. Cutler, D. G. S. The High School for Boys, Croydon.

##### French.

1. Low, W. N. E. B. Linton House School, Holland Park Avenue, W.
2. { Arnold, H. G. Norwich High School for Boys.  
Henaff, Miss St. Joseph's Convent, Olney, A. M., Bucks.

##### German.

1. Schaffer, R. Marist Bros.' College, Uitenhage.
2. { Heiman, E. Private tuition.  
Wichmann, R. E. L. Tollington School, Muswell Hill.

##### Dutch.

## SCIENCE IN ORDINARY LIFE.

By E. C. ABBOTT, M.A.

THE importance of a general knowledge of science which can be applied to the needs of everyday life is now being recognized, and it is hoped that steps will be taken to make the great principles of science more widely known. Science has for too long been left to scientific men, and not sufficiently applied to ordinary life; and, though it is taught in schools, the most difficult part is generally taken first, so it seldom goes far enough to be interesting or useful.

Those who study the sciences find they become more and more interesting and useful as they go on. New wonders open up on every side; things which have been puzzling become clear, and what seemed impossibilities become realities. New forces can be turned to account, new substances made, or new uses found. Discoveries and inventions can be made, and life becomes full of interest. A man who cares about science is seldom dull, as the world is before him, so that nothing seems monotonous or commonplace. The wonders to which science admits him extend to the stars and the whole universe on the one hand, and to the simplest microscopic cell on the other.

Though such a knowledge needs years of study, it is possible for any one to understand enough science to be a help from day to day, and to add considerably to the interest and usefulness of life. The great principles of science can be made simple and interesting. They can be illustrated by natural observation and experience, and applied to everyday needs. Science is so closely connected with our lives that we are handicapped altogether if we do not know the rules of the game. The laws of Nature must be obeyed, and want of knowledge will not serve as excuse when they are broken; while if we do understand them we can make use of them for our own advantage. Chemical changes are taking place with every breath and with every movement—as we eat, as we work, and as we sleep; and if we understand what is going on, we can regulate and alter these actions to suit our own purposes.

Many people disregard the laws of health, and they and their children suffer all their lives as a result. Most people would have better health if they realized that they are hindering, rather than helping, the natural actions of the body. A knowledge of science is needed in the house, for cookery, repairs, lighting, heating, and drainage are all based upon it. People may be shown how to do these things, and may do them with a certain amount of skill, but they cannot work as intelligently as they would if they understood the scientific reason for each action. Gardening, farming, and agriculture need a considerable knowledge of science if they are to be successful, and not done in an amateur way. Manufacture and everything connected with machinery depend entirely upon science. The man in the street depends on it for his own health, and that of his family: for the comfort of his home, and for success in his work. People are beginning to demand that the help that science has to give should be made accessible to every one. If the trade of the country, the efficiency of the people, and the comfort of the homes are to be improved, it is necessary that every one should have a general and useful knowledge of science, which will be helpful to them from day to day.

To meet this need a course of general science can be planned for all children from twelve to fourteen for the last two years in the elementary school, or the first two in the secondary school, or in continuation classes. Such a course would serve as a minimum of useful knowledge for ordinary life, and also as a groundwork for future study of technical subjects or of more systematic science. It should be a simple, general, and useful preliminary course of chemistry and physics, based chiefly on observation and previous experience, and taught in the same way as Nature study is taken with younger children.

Children are always ready to observe the laws of Nature, and to ask how one thing works, why another thing happens, or what is the use of something else. They are interested in machinery, and like to watch a workman when he is doing repairs. Little children prefer mechanical toys,

and anything that moves, and want to know what makes wheels go round, how an engine works, and why a train goes. It is often difficult to answer their questions, but it is important to satisfy them, and to explain enough to keep up their interest, and make them want to know more. When they realize that definite mathematical forces are used in the turning of a handle or a wheel, in the opening of a window, the pulling up of a blind, the hanging of a picture, the use of a poker, spade, oar, corkscrew, scissors and sugar tongs, and in the working of a sewing machine, bicycle, seesaw, and swing, they will understand that science is something living and real, and that ordinary life is full of wonder and interest. They can also be taught in a simple way the supporting power of air and water in connexion with aeroplanes, boats and submarines, the action of the air in breathing, burning and decay, about fuels and illuminants, coal, coke, coal gas, coal tar, and aniline dyes; water and distillation, rain, springs, rivers, hard and soft water; washing materials, as soap, soda, starch, and bleaching powder; the properties and uses of various chemicals and gases, the uses of different metals; the nature and cooking of different food materials, as meat, milk, eggs, vegetables, grains, fruit, sugar, fats and oils; the action of dry meat and hot water on these, and the manufacture of cotton, woollen, silk, and leather goods, paper, glass, and china.

Though this course covers a wide range, it need not be superficial; it should concentrate the attention on the great principles of science, which should be illustrated and explained very fully. It is intended to serve as the groundwork in science, and the training in scientific method, which are needed as a basis for the intelligent study of other subjects. Geography, housecraft, hygiene, cookery, nursing, gardening, and mathematics, as well as the ordinary sciences, all need a general preliminary knowledge of chemistry and physics. These can be taught in an easy attractive way from general observation, just as Nature study is taught as an introduction to the more systematic study of Botany and Zoology.

The method of this course is to bring all the previous observation, knowledge, and experience to bear on the great principles of science. When children come to school they have already accumulated a great deal of information and experience, and have unconsciously made many observations and experiments of their own, and their numerous questions show how anxious they are to have these things explained. It is surely worth while to collect and make use of the facts they already know and the observations they have already made, and to explain the things in which they are already interested. Then they will be ready and eager to plan further experiments, to find out more, and to think how they can apply their knowledge to other cases. This course collects all the facts, observations, and experiments to build up the general principles. It shows exactly how much each experiment proves: it shows what each substance may be expected to do; it examines and weighs all the evidence, and mathematically builds up the proof. It then applies it in all directions and reasons out rationally to make use of it. Science and mathematics are recommended as offering training in accurate observation, clear thought and expression, the weighing of evidence, the building up of proof, and the application of knowledge, and this scheme should supply all this. It is hoped that some such course may be taken by all children, as a training in thought, as a basis for technical or science subjects, and as supplying much useful information, which will be a help and interest in everyday life.

MR. FISHER, Minister of Education, attended last week a Conference in London of textile workers' employés and Lancashire members of Parliament on the question of half-time employment, which is abolished under the Education Bill. Mr. Fisher held out no hope to the Conference of any change of proposals regarding the employment of young children, and urged the necessity of much improved education to meet the intense international competition which would come after the War. Half-time, he stated, held up the general education system.—*Times*.

SIR EDWARD STERN has made a donation of £2,000 for the endowment of a scholarship in connexion with the Degrees in Commerce which the University of London has so wisely decided to institute.

MACMILLAN & CO., Ltd., ST. MARTIN'S STREET, LONDON, W.C.2.

## A Selection of Messrs. LONGMANS, GREEN & Co.'s List of Educational Works in French, Latin, History, Geography, and Mathematics.

### FRENCH.

**LONGMANS' MODERN FRENCH COURSE.**  
Containing Reading Lessons, Grammar, Passages for Repetition, Exercises, and Vocabulary.

By T. H. BERTENSHAW, B.A., Mus.Bac.,  
Assistant Master in the City of London School.

With Illustrations by D. M. PAYNE. Crown 8vo.

**Part I.**—40 Reading Lessons with Corresponding Grammar and Exercises. With 43 Illustrations of French Life and a Map. Pupils' Edition, 1s. 6d.; Teachers' Edition, 2s.

**Part II.**—57 Reading Lessons with Corresponding Grammar and Exercises. With 20 Illustrations of French Life, 13 from Photographs, and 2 Maps. Pupils' Edition, 2s.; Teachers' Edition, 2s.

*The Teachers' Edition consists of all the matter in the Pupils' Edition, with additional Notes on Reading Lessons, Grammar, and Passages for Repetition, Translation of Exercises, &c.*

### LONGMANS' FRENCH TEXTS.

Edited with Notes, Exercises, and Vocabulary.

By T. H. BERTENSHAW, B.A., Mus.Bac.

IN THREE GRADES.

**ELEMENTARY SERIES.**—Price 8d. each; Teachers' Edition, 8d.

LE PREMIER COUCOU DE LA FORÊT-NOIRE. (L. Vuichoud.)

LA COMÈTE, &c. (Ereckmann-Chatrion.)

L'AVENTURE DE JACQUES GÉRARD. (M. Stephanie.)

ULYSSE CHEZ LES CYCLOPES. (Octave Simone.)

**Longmans' Illustrated First French Reading Book and Grammar.**—By JOHN BIDGOOD, B.Sc., late Head Master of the Gateshead Higher Grade School, and THOMAS HARBOTTLE, Teacher of French in the same School. With 55 Illustrations. Crown 8vo, 1s.

**Longmans' Illustrated First Conversational French Reader.**—With Notes and Full Vocabulary. By T. H. BERTENSHAW, B.A., Mus. Bac., Assistant Master in the City of London School. With 86 Illustrations. Crown 8vo, 2s.

### LATIN.

#### LONGMANS' LATIN COURSE.

With Copious Exercises and Vocabulary. Crown 8vo.

**Part I.**—Up to and including the Regular Verb, Active and Passive, 1s. 6d.

A Key, for the use of Teachers only, post free, 3s. 8½d.

**Part II.**—Including Pronouns, Numeral Adjectives, Irregular Verbs, Accusative and Infinitive, Ablative Absolute, Dependent Questions, Dependent Clauses, the Use of the Cases and Oratio Obliqua. 2s. 6d.

A Key, for use of Teachers only, post free, 5s. 3d.

**Parts I and II.**—Complete in One Volume, 3s. 6d.

A Key, for the use of Teachers only, post free, 7s. 9½d.

**First Steps in Latin.**—By F. RITCHIE, M.A. Fcap. 8vo, 2s. 6d.

A Key, for the use of Teachers only, post free, 3s. 8½d.

**Second Steps in Latin.**—By F. RITCHIE, M.A. Fcap. 8vo, 2s.

**Exercises in Latin Prose Composition.**—By F. RITCHIE, M.A. Crown 8vo, 3s.

A Key, for the use of Teachers only, post free, 3s. 9d.

**Fabulae Faciles.**—A First Latin Reader. Containing Detached Sentences and Consecutive Stories. With Notes and a Vocabulary by F. RITCHIE, M.A. Crown 8vo, 2s. 6d.

**Longmans' Illustrated First Latin Reading Book and Grammar.**—By H. R. HEATLEY, M.A., Author of "Gradatim," "Græcula," &c. With 67 Illustrations by LANCELOT SPEED. Crown 8vo, 1s. 4d.

**A Junior Latin Reader.** Compiled by P. M. DRUCE, M.A., and M. D. MANDUELL, M.A. With 38 Maps and Illustrations. Crown 8vo, 2s.

**Gradatim:** an Easy Latin Translation Book for Beginners. With Vocabulary by H. R. HEATLEY, M.A., and H. N. KINGDON, M.A. Fcap. 8vo, 2s.

A Key, for the use of Teachers only, post free, 5s. 2½d.

*A Full List of Messrs. Longmans, Green & Co.'s Books on French, Latin, History, Geography, and Mathematics, will be sent, post free, on application.*

New York, Bombay, Calcutta, and Madras.

### HISTORY.

#### LONGMANS' HISTORICAL SERIES FOR SCHOOLS.

By T. F. TOUT, M.A.,  
Professor in Medieval and Ecclesiastical History in the University of Manchester.

**Book I. A First Book of British History from the Earliest Times to the Death of Edward VII.**—With 85 Illustrations, 13 Genealogical Tables, and 25 Maps and Plans. 2s. 6d.

**Book II. A History of Great Britain from the Earliest Times to the Death of Edward VII.**—With 35 Maps and Plans, 8 Genealogical Tables, and 146 Portraits and other Illustrations. 3s. 6d.

[Book II is also issued in two parts, 2s. each. Part I: From the Earliest times to 1485. Part II: From 1485 to the Death of Edward VII.]

**A Short History of England to the Death of Edward VII.**—By CYRIL RANSOME, M.A., late Professor of Modern Literature and History, Yorkshire College, Victoria University. With Tables, Plans, Maps, Index, &c. Crown 8vo, 3s. 6d. Or in two parts, 2s. each. Part I: To the Death of Elizabeth, A.D. 1603. Part II: A.D. 1603 to 1910.

**Outline of English History, B.C. 55 to A.D. 1910.**—By SAMUEL RAWSON GARDNER, D.C.L., LL.D. With 71 Woodcuts and 17 Maps. Fcp. 8vo, 2s. 6d.

**Landmarks of British History.**—By LUCY DALE, late Scholar of Somerville College, Oxford. With 8 Coloured Plates by H. J. FORD, and 72 other Illustrations. Crown 8vo, 2s. 6d.

**The Life of Nelson.**—With Maps, Battle-plans, and Illustrations. By GEOFFREY CALLENDER, M.A., Merton College, Oxford; Head of the History and English Department, Royal Naval College, Osborne. Crown 8vo, 1s. 6d. Prize Edition, 2s. 6d. net.

**The Growth of the British Empire.** By P. H. and A. C. KERR. With 4 Coloured Illustrations, 63 Maps (4 of which are Coloured), and other illustrations. Crown 8vo., 2s.

### GEOGRAPHY.

#### LONGMANS' GEOGRAPHICAL SERIES.

Crown 8vo.

**Book I. The First Book of Geography.**—With 17 Illustrations and 52 Maps (38 of which are Coloured). New and Revised Edition. 1s. 6d.

**Book II. The World. For Junior Students.**—With 95 Illustrations and 87 Maps (79 of which are Coloured). New Edition, Revised, partly Re-written and Enlarged. 3s.

### MATHEMATICS.

**The Groundwork of Arithmetic.**—A Handbook for Teachers. By MARGARET PUNNETT, B.A., Vice-Principal of the L.C.C. Day Training College, Southampton Row, W.C. With Diagrams. Crown 8vo, 3s. 6d.

"A really inspiring work, that every elementary teacher should have on his or her bookshelf; nor can I imagine a teacher of older children reading through the text without obtaining considerable benefit thereby."—*Mathematical Gazette.*

*Companion Books to the above for Pupils' use.*

**Exercises in Arithmetic.**—By MARGARET PUNNETT. Crown 8vo. Book I, 4d.; Book II, 6d.; Book III, 6d.

**Longmans' Junior School Arithmetic.**—An Arithmetic for Beginners. Mental and Practical. Fcap. 8vo. Without Answers, 1s.; with Answers, 1s. 6d.

**Longmans' Junior School Algebra.**—By WILLIAM S. BEARD, F.R.G.S. Crown 8vo. Without Answers, 2s.; with Answers, 2s.

**COLLEGE OF PRECEPTORS  
CERTIFICATE AND LOWER FORM  
EXAMINATIONS, 1919.**

*S. denotes the Senior Examination, J. the Junior, P. the Preliminary,  
L.F. Lower Forms.*

**Scripture History.**

- ACTS OF THE APOSTLES (Part I, Ch. 1-16).** (S., J.)  
Edited, with Introduction, Notes, and Maps, by Rev. W. H. FLECKER, D.C.L., M.A., Head Master of Dean Close School, Cheltenham. 1s. 9d.
- GOSPEL OF ST. MARK.** Edited, with Introduction, Notes, and Maps, by Rev. T. WALKER, M.A., and J. W. SHUKER, M.A. 1s. 9d. (S., J.)
- GOSPEL OF ST. MARK.** (Preliminary Edition.) Edited, with Introduction, Notes, and Maps, by Rev. J. F. RICHARDS, M.A., and Rev. T. WALKER, M.A. 1s. 3d. (P., L.F.)

**English Literature.**

- SCOTT.—LADY OF THE LAKE.** Edited by A. R. WEEKES, M.A. 1s. 9d. (P.)
- SCOTT.—LADY OF THE LAKE. Cantos I and V.** (L.F.)  
By A. R. WEEKES, M.A. 10d.
- SHAKESPEARE.—RICHARD II.** By A. F. WATT, M.A. 2s. (S., J.)
- SHAKESPEARE.—AS YOU LIKE IT.** By A. R. WEEKES, M.A. 2s. (S.)
- SHAKESPEARE.—AS YOU LIKE IT.** By A. R. WEEKES, M.A., and F. J. FIELDEN, M.A. 1s. 6d. (Junior Shakespeare.) (J.)
- SPENSER.—FAERIE QUEENE, Book I.** By W. H. HILL, M.A. 3s. (S.)

**English History.**

- EARLIER HISTORY OF ENGLAND (to 1485).** With Biographies, Maps, and Plans. By C. S. FEARENSIDE, M.A. 3s. (S.)
- MODERN HISTORY OF ENGLAND. Part I, 1485-1714. Part II, 1688-1901** (with a concise Introduction down to 1714). Each 3s. (S.)
- SCHOOL HISTORY OF ENGLAND.** By M. E. CARTER, (S., J.)  
Honour School of Modern History, Oxford. With Plans and Coloured Maps. 4s. Also in Three Parts. Part I, to 1603. Part II, 1485-1714. Part III, 1660-1910. Each 1s. 9d.
- PRELIMINARY HISTORY OF ENGLAND.** By M. K. (P., L.F.)  
ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, B.A. With Illustrations. 2s. 6d.

**Geography.**

- GEOGRAPHY OF AUSTRALASIA (with Africa).** (J.)  
Junior. By G. C. FRY, M.Sc. 10d.

**Latin and Greek.**

- CAESAR.—GALLIC WAR, Book VII.** By A. H. ALLCROFT, (S., J., P.)  
M.A., and W. F. MASOM, M.A. With Introduction, Notes, and Complete Alphabetical Lexicon. 1s. 9d.
- CICERO.—DE SENECTUTE.** By A. H. ALLCROFT, M.A., (S.)  
and W. F. MASOM, M.A. With Introduction, Notes, and Complete Alphabetical Lexicon. 1s. 9d.
- VERGIL.—AENEID, Book I.** By A. H. ALLCROFT, M.A. (S., J.)  
and W. F. MASOM, M.A. With Introduction, Notes, and Complete Alphabetical Lexicon. 1s. 9d.
- EURIPIDES.—HECUBA.** By T. T. JEFFERY, M.A. With (S.)  
Introduction and Notes. 1s. 9d.

**OLD SCHOLASTIC ADVERTISEMENTS**

By C. EDGAR THOMAS.

III.

Two papers on old scholastic advertisements from the pen of the present writer have already appeared in these columns, but further research has brought to light one or two other specimens, which are now submitted in the hope that their interest may justify their appearance.

An interesting sidelight on the state of education in England in the thirties of last century may be found in Count Edouard de Melfort's "Impressions of England," which appeared in 1836. He says:—

Even in the lowest classes in England it is difficult to find a person who does not know how to read or write. There is scarcely any village, however significant, which has not its "National School," and, without meaning any offence to other countries, I think I may assert that the education of the people in England is superior to that of any other.

This is certainly a very rosy and optimistic statement, but it is just possible that the Count was too optimistic, for contemporary writers have expressed just the opposite—that the lower classes were very uneducated, and that but few could read and write, particularly in the country districts. The better classes, of course, received a preparatory education before proceeding to the Universities, while among the middle classes a classical education was still predominant over one that would fit its recipient for a commercial career. The ordinary boarding-schools received scholars from 30 to 45 guineas per annum, but this sum was very considerably increased by means of "extras." The following advertisement dates from 1830:—

Exeter College, Snaresbrook, six miles from London, for the reception of gentlemen designed for mercantile pursuits, the legal and medical professions, the naval and military institutions, and the Universities. The number is limited, they are parlour boarders, and each has a separate bed. The establishment is under the immediate attention of the Principal and resident classical assistants, with the regular attendance of professional gentlemen of eminence in the departments of French, drawing, music, dancing, &c. Terms—per annum. A mercantile course with mathematics, history, geography, use of the globes, astronomy, &c., twenty-five guineas; or with the classics, in Latin, Greek, and including drawing, music, and dancing, thirty guineas; any one of the languages or accomplishments selected with the first course, four guineas. Every department of this establishment is arranged and conducted on the most comprehen-

**University Tutorial Press, Ltd.,**

**High Street, New Oxford Street, London, W.C. 2.**

sive scale of liberality. The pupils are the sons of private and professional gentlemen of the highest respectability in London and various parts of the kingdom . . .

Considering the conditions of that time it must be conceded that this was a fairly cheap school. Another establishment to which well-to-do people would be likely to send their children was situated near Newbury, and appears to have been conducted on the lines of a regular grammar school. The advertisement concerning it ran as follows:—

Young gentlemen are received from 4 to 20 years of age. Terms—from 4 to 10 years of age, 25 guineas; 10 to 15, 35 guineas; 15 to 20, 40 guineas; parLOUR-boarders, 80 guineas per annum.

But there were, unfortunately, many much lower-class schools—establishments such as Dickens has held up to ridicule in "Nicholas Nickleby," and in the preface to which book he states that he has written of no one (school) in particular. Many readers will remember the scene where Snawley brings his sons-in-law to the Saracen's Head—a passage which is of particular interest to us for its reference to scholastic advertisements.

"Mr. Squeers, I believe, sir?"

"The same, sir," said Mr. Squeers, with an assumption of extreme surprise.

"The gentleman," said the stranger, "that advertised in *The Times* newspaper?"

"*Morning Post*, *Chronicle*, *Herald*, and *Advertiser*, regarding the academy called Dotheboys Hall, at the delightful village of Dotheboys near Greta Bridge, in Yorkshire," added Mr. Squeers. "You come on business, sir, I see by my young friends! . . ."

"Hem!" said the other, "twenty pounds, per annum, I believe, Mr. Squeers?"

"Guineas," rejoined the schoolmaster, with a persuasive smile.

"Pounds for two I think, Mr. Squeers," said Mr. Snawley, solemnly.

"I don't think it could be done, sir," replied Mr. Squeers, as if he had never considered the proposition before. "Let me see: four times five is twenty, double that and deduct the —. Well, a pound either way shall not stand betwixt us. You must recommend me to your connection, sir, and make it up in that way! . . ."

"And this," resumed Snawley, "has made me anxious to put them to some school a good distance off, where there are no holidays—none of those ill-judged comings home twice a year that unsettles children's minds so—and where they may rough it a little; you comprehend?"

The following advertisements are culled from *The Times*, in which paper they were inserted every half-year. The first may be found under date July 15, 1830:—

**EDUCATION.** By Mr. Shaw, at Bowes Academy, Greta Bridge, Yorkshire. YOUTHS are carefully instructed in the English, Latin, and Greek languages, common and decimal arithmetic, book-keeping, mensuration, surveying, geometry, geography, and navigation, with the most useful branches of the mathematics, and provided with board, clothes, and every necessary, at 20 guineas per annum each. No extra charges. No vacations. Further particulars may be known on application to . . . Mr. Shaw attends at the George and Blue Boar, Holborn, from 12 to 2 daily, where a card of particulars may be seen.

The similarity between this advertisement and Dickens's description in "Nicholas Nickleby" will at once be noticed, and it is probable that the novelist had himself read the advertisement in *The Times*.

In the same paper for September 18, 1830, this note appeared:—

**At KIRBY HALL ACADEMY**, near Richmond, Yorkshire. Conducted by I. Nelson and assistants. The system of instruction comprehends all the useful branches of a liberal education, comprising the Greek and Latin classics, mathematics, &c., at 22 guineas per annum. No extra charges. No vacation. French language and drawing on the usual terms. I. N. will attend daily at the "Saracen's Head," Snow Hill. . . .

Regarding the famous—or rather infamous—Dotheboys Hall, a correspondent sent a most interesting communication to *Notes and Queries* in 1873. The contribution consisted of extracts from a letter of an old friend and schoolfellow and read as under:

It is a very fine country—fresh mountain air. Dotheboys Hall is still here—no longer a school. Mr. Shaw, the original of Squeers,

married a Miss Laidman, who was a sort of cousin of my father. The school buildings are pulled down, but the house (Dotheboys) is still a very nice handsome one, with large offices, cow-houses, &c. We learn from our landlady that in the room where we are now sitting ("Unicorn Inn," Bowes), Dickens had lunch the day he and a friend rode over from Barnard Castle to see and make sketches of Mr. Shaw's school, and this same old lady, Mrs. Highmore, waited on them. Dickens was only here that day, but he stayed longer in Barnard Castle, and got a great deal of gossip, not too true, about the school, from one —, a quondam usher of Shaw's and "a bad lot," who had, indeed, been turned off for bad conduct.

Mrs. Highmore tells me, as indeed my father always says, that Dotheboys Hall is a most exaggerated caricature, but somehow the description was in some respects so correct that everybody recognized it. Poor Shaw quite took it to heart, and did no more good, got childish and paralytic, and soon died. The school went down fast, Mrs. Shaw also died broken-hearted. But a good deal of money was left behind. Mrs. Highmore says there were an immense number of boys; that Mr. Shaw chartered a special coach to bring them from London (this place is on one of the great coaching roads between York and Glasgow); and that there was great joy in the village on the arrival of the coach and its precious freight—quite the event it was. She says that the boys were used very well, and fed as well as could be expected for £20 a year; that there might be things wrong, but no complaints were ever made; that Shaw made money because on his own farm he grazed the cows and fed the sheep and pigs which supplied the boys' food.

My impression is that Yorkshire schools were bad, but not so bad as Dickens makes out, and Shaw's was better than most of them. There is a strong feeling here of indignation against Dickens, who, no doubt, ruined poor Shaw.

An old pupil of Mr. Squires—the Mr. Squeers of Dickens's "Nicholas Nickleby"—has died at New Brunswick, leaving behind a record of his school days. This is to be published as a sort of *post-mortem* vindication of Mr. Squires, whose career as a pedagogue was rather unfairly caricatured by the novelist. The old pupil is the Rev. Ralph Willis, a native of London. He went to school at Bowes in Yorkshire, and it was through his father that Dickens heard of the school. Many of the scenes in the book he describes as inventions, but the moral of the reminiscences is that Squires was not as black as he was painted.

The cost of sending a girl to a boarding school was seemingly about much the same as that for a boy, although day-schools appear to have been very cheap indeed. That is, if we are to judge by one situated in Salisbury Square, Fleet Street, and of which the advertisement informed us that

Their system of education is the result of close observation, blended with long experience, and it embraces all the advantages of a superior private instruction with those which will ever be found to exist in a well conducted school. Terms, including reading, geography, history, grammar, and useful and ornamental needlework, one guinea per quarter. The Misses Thompson are assisted in the departments of penmanship and arithmetic, the French, Italian, and Latin languages, music, drawing, and dancing by professors of eminence, on the usual terms.

The next advertisement, however, probably appealed to a far richer clientele:—

At a first-rate FINISHING LADIES' SEMINARY, VACANCIES occur for a few pupils. The system of education adopted is of the highest order, embracing superior and peculiar advantages. In addition to an extensive course of English studies, invaluable to young ladies finishing their education, they will be perfected in the French and Italian languages, music, comprising the harp, pianoforte, and singing, with a knowledge of harmony and thorough bass, drawing, dancing, and every research in science and literature to qualify them to move in the first circles.

In connexion with the foregoing it is interesting to note that the guitar—then a very fashionable instrument—is not mentioned, and equally curious is the fact that the Spanish and German languages were not taught. The dancing lessons comprised instruction in the galop, mazurka, waltz, quadrilles, and a variety of fancy dances, such as the then popular shawl dance, &c. Apparently no other physical exercises were taught—no swimming, nor Swedish exercises and gymnastics. School punishments then generally consisted of "being put in the stocks" which made the pupils turn out their toes, and the back-board, which tended to expand the chest and cure round shoulders, while their principal relaxation was a solemn walk in procession!

## THE COLLEGE OF PRECEPTORS.

## HALF-YEARLY GENERAL MEETING.

THE ordinary Half-yearly General meeting of the members of the Corporation was held at the College of Preceptors, Bloomsbury Square, W.C.1, on Saturday, March 23rd.

Prof. JOHN ADAMS was appointed Chairman.

The CHAIRMAN having appointed Mr. Cholmeley and Mr. Longsdon to act as Scrutators, the meeting elected twelve members of the Council and three Auditors as follows:—

## AS MEMBERS OF THE COUNCIL.

- Prof. John Adams, M.A., B.Sc., LL.D., F.C.P., 23 Tanza Road, Hampstead, N.W.  
 G. Armitage-Smith, M.A., D.Lit., 3 Albert Terrace, Regent's Park, N.W.  
 Rev. J. O. Bevan, M.A., F.G.S., F.C.P., Chillenden Rectory, Canterbury.  
 F. Charles, B.A., 3 Grange Road, Bushey, Herts.  
 Miss E. A. S. Dawes, M.A., D.Lit., 6 Bedford Place, Russell Square, W.C.  
 Prof. W. E. Dixon, M.A., M.D., B.Sc., F.R.S., The Grove, Whittlesford, Cambs.  
 S. Gregory-Taylor, M.A., Shoreham Grammar School, Sussex.  
 T. Hay, M.A., The Grammar School, Chelmsford.  
 A. Millar Inglis, Maidenhead College, Maidenhead.  
 E. J. Morgan, Castle Hill School, The Avenue, Ealing.  
 Rev. J. A. Nairn, Litt.D., B.D., Merchant Taylors School, Charterhouse Square, E.C.  
 F. A. Sibly, M.A., LL.D., Haywardsfield, Stonehouse, Glos.

## AS AUDITORS.

- H. Chettle, M.A., 76 Ridge Road, Hornsey, N.  
 J. Blake Harrold, F.C.R.A., A.C.I.S., 61 Streatham Hill, S.W.  
 S. J. Walters, A.C.P., 56 Newstead Road, Lee, S.E.

The Report of the Council was laid before the meeting and was taken as read, a copy having been previously sent to every member of the College. It was as follows:—

## REPORT OF THE COUNCIL.

THE Council beg leave to lay before the members of the College the following Report of their proceedings since the issue of their last Report:—

1. A course of twelve lectures to teachers on "The Ideal and the Actual in Present-day Education" has been delivered by Prof. John Adams; and a course of twelve lectures on "Psychology for Teachers" was begun on February 7. The first course was attended by about sixty students and about forty have taken tickets for the second course.

2. The Christmas examination of teachers for the College diplomas began on December 31 and ended on January 5. It was attended by 210 candidates—50 for the Licentiate and 160 for the Associateship. Since the issue of the last Report, the diploma of Licentiate has been conferred on six candidates and that of Associate on fifty-two, who had satisfied the prescribed conditions.

3. (a) The Christmas Certificate and Lower Forms Examinations were held on December 3 to 8, and were attended by 3532 candidates.

(b) For the Professional Preliminary Examination, which is to be held on March 5, 6, and 7, the number of entries is 337.

(c) At the request of the Midland Branch of the Private Schools Association, two members of the Council have been appointed to address that Branch on the subject of Local Examinations.

4. The Examination for Certificates of Proficiency in Commercial Subjects was held for the first time in December last. The scheme of examination has been favourably received by some of the English Chambers of Commerce and by a number of business houses. In the issue of the Regulations for 1918 the Council have drawn special attention to the importance of good handwriting.

5. Since the issue of the last Report six members have been elected and five have withdrawn from membership. The Council regret to have to report the death of the following members: The Rev. F. Besant, Mr. J. L. Butler, the Very Rev. Dr. H. Montagu Butler, Miss A. J. Cooper, F.C.P., Mr. F. D. Fox, F.C.P., Mr. W. Holloway, Mr. E. J. Huelin, L.C.P., the Rev. E. F. M. MacCarthy, and Mr. F. Ritchie.

6. A Joint Committee of representatives of the College of Pre-

ceptors and the Private Schools Association has been engaged in considering in what way private schools may become a recognized part of a national system of education. The President of the Board of Education has consented to receive a deputation of representatives of the two bodies.

7. (a) Representatives of the Council have taken part in the work of the Teachers Registration Council, the Federal Council of Secondary School Associations, the Teachers' Training Committee, the Joint Scholarships Board, the Committee of the Conference of Educational Associations, the Secondary School Teachers' War Relief Fund Joint Committee, the League of the Empire, the Joint Scholastic Agency, and the Joint Agency for Women Teachers.

(b) *Teachers Registration Council.*—At the February meeting of the Council it was announced that the total number of applicants for admission to the Register up to and including Thursday, February 7, was 20,174, a number which included 6,728 teachers in secondary schools.

The Council has appointed a Special Committee to consider the proposals of the Education Bill. A resolution affirming general approval of the measure has been passed, but on certain points the Council feels that amendments should be made. Thus, it has resolved to recommend that the teachers should have a statutory right to elect representatives to the Local Education Committees.

In connexion with the proposal contained in Clause 24 of the Bill, providing for an inquiry as to private schools, the Council has given special instructions to a Parliamentary Sub-Committee, of which one of the members is Mr. S. Maxwell, Chairman of the Private Schools Association.

(c) *Federal Council.*—Arising out of the proceedings of the Federal Council, your representatives took the initiative in arranging for a conference of representatives of the College of Preceptors and the Private Schools Association with reference to the question of the inclusion of efficient private schools as a recognized part of a national system of education.

(d) *Secondary School Teachers' War Relief Fund.*—The Committee of this Fund, with the help of the excellent organization generously placed at their service by the Assistant Masters' Association, have afforded aid in a number of cases after full inquiry into the circumstances of each. The total amount collected for the Fund is £4,500, but more is needed to enable the Fund to meet its present commitments in allowances, irrespective of emergency grants.

(e) *The Joint Scholastic Agency.*—The Agency has been unusually successful in its work during the last six months. The vacancies filled have been numerous and in good schools, while the salaries offered have been uniformly good. The success in filling these vacancies is not due to an increase in the number of men at a loose end seeking immediate appointments. The permanent nature of the posts, and the comparative excellence of the salaries offered, were such as to induce applications from men of a better class. The work done during the last six months compares very favourably with that done during the corresponding period of any of the past eleven years.

(f) *Joint Agency for Women Teachers.*—The conditions under which the Agency has been working have not changed during the last six months. Of the number of posts filled, one-third have been in boys' and mixed schools. The dearth of teachers of mathematics and of science—particularly of science—is still very great.

The Report of the Council was adopted.

The TREASURER proposed the adoption of the accounts for the year ended 24 December, 1917.

Dr. DICKINSON, the retiring senior Auditor, said that although, owing to conditions arising out of the War, the accounts showed a deficit, substantial sums had been added to the Reserve Fund and the Building Redemption Fund. Since the beginning of the War the Reserve Fund had been increased by more than £1,100, and the Building Redemption Fund by £378.

The accounts were approved and the Report of the Auditors was adopted.

The Report of the Dean, which was adopted, was as follows:—

## THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you some details concerning the Christmas Certificate and Lower Forms Examinations, together with extracts from the reports of the Examiners.

The examinations were held on the 3rd–8th of December at the

following places in the United Kingdom:—Aberdeen, Aylesbury, Bentham, Bewdley, Birmingham, Blackburn, Blackpool, Brentwood, Brighton, Bristol, Broadstairs, Cardiff, Carlisle, Carmarthen, Cheltenham, Chulmleigh, Cleut, Colwyn Bay, Croydon, Edinburgh, Exeter, Glasgow, Goudhurst, Harrogate, Hastings, Hawkhurst, Henley-on-Thames, Herne Bay, Horsham, Jersey, Knowle, Launceston, Leeds, Leicester, Liverpool, London, Lytham, Manchester, Muswell Hill, Nantwich, Newcastle-on-Tyne, Newquay (Cornwall), Norwich, Nottingham, Ongar, Penketh, Plymouth, Portsmouth, Richmond, Seaford, Sheffield, Shirley, Shoreham, Southampton, Southend, Southport, St. Leonards, Sunderland, Swindon, Taunton, Torquay, Whitby, Woodford, Worthing, York.

The Examinations were also held at the following Colonial Centres:—Accra, Bathurst, Cape Coast Castle, Lagos (West Africa); Nairobi (British East Africa); Cape Town, Durban, Grahamstown, Johannesburg, Kimberley, Kokstad, Kroonstad, Oakford, Pietermaritzburg, Potchefstroom, Vientage (South Africa); Colombo and Wellawatte (Ceylon); St. Vincent (West Indies); Nassau (Bahamas); Rangoon.

The total number of candidates who sat for the Certificate Examination was 2614\*—1913 boys and 701 girls.

The following table shows the proportion of candidates who passed in the grade for which they were entered:—

		Examined*	Passed*	Percentage
BOYS.	Senior .....	228	120	53
	Junior .....	764	499	65
	Preliminary .....	693	559	81
GIRLS.	Senior .....	124	51	41
	Junior .....	216	129	60
	Preliminary .....	258	204	79

The above table does not take account of those candidates who obtained Certificates of a lower grade than that for which they were entered, nor of those (331 in number) who entered for certain subjects required for professional preliminary purposes.

The number of candidates who sat for the Lower Forms Examination was 397—559 boys and 338 girls. Of these 460 boys and 232 girls passed, or 82 and 69 per cent. respectively.

## EXTRACTS FROM EXAMINERS' REPORTS.

### Scripture History.

**Senior.**—Speaking of this grade as a whole, there was evidence of honest preparation and intelligent study. The faults were the old faults—failure to grasp the important point and the subsequent writing off the subject; ill assimilated knowledge; sometimes pretentious writing as if to conceal ignorance; and in a few cases the elementary faults of bad handwriting, grammar, and spelling. These faults are mentioned as marking some papers, but do not affect the merit of the work as a whole, which showed conscientious interest in the subject.

**Junior.**—The answering on the New Testament sections was not as good as usual, but about one-third did very well. A not infrequent error was that of referring "the prophet of the Highest" to our Lord instead of John the Baptist; and, in the Acts, of confusing Barnabas with Matthias; but, on the whole, incidents and characters were clearly grasped and described. In the Old Testament, the teaching appears to have failed to produce clear impressions in regard to times and places. Maps had seldom been used. The rebuilding of the Temple and the rebuilding of the walls of Jerusalem were not distinguished. Nor were the earlier times of the Kings of Israel much better known. A few, however, sent in remarkably good answers to both sections of the Old Testament.

**Preliminary.**—The strong point in these papers was the knowledge of the facts of Bible history. This showed itself in the answers in all sections; narratives of events and records of sayings were, on the whole, well done. The simple explanations of the facts which were asked for were not so readily given. The stories, for example, in the parables of Dives and Lazarus and of the Rich Fool were generally correctly repeated; but the lessons to be drawn from them were frequently omitted altogether, or wrongly conjectured. In like manner, only a few had thought about the meaning of the Transfiguration, though most candidates knew the story very well. In the Old Testament papers it was pleasing to note how often the Scriptural characters were very real persons to the writers. This applied specially to Joseph, in whose activities as a food controller present circumstances had evidently stirred up considerable interest. This connexion of the subject with the experience of the pupil is always to be encouraged as making the Bible a living book in the classroom.

\* Not including Candidates examined at Wellawatte and Rangoon.

**Lower Forms.**—In the New Testament the earlier part of the Gospel seemed to be better known than the later chapters. Very many of the answers on the Lord's Temptations were very full and accurate. There was also much to commend in the work done on the parables dealing with prayer. It may be worth suggesting that in St. Luke's Gospel the Lord's teaching is not grouped under heads in the same way as it is in St. Matthew, and that therefore more help is needed from the teacher in bringing together passages dealing with the same subject. In the Old Testament sections the patriarchal period was, on the whole, well done. The histories of Saul and David appear to have been found more difficult. In all sections a general inability to spell proper names suggests the need for a more extended use of the blackboard.

### English.

**Senior and Junior.**—Both seniors and juniors did better than usual, and this was more noticeable in the case of the seniors.

**Preliminary.**—The subject-matter of the selected books was well known by almost all. In all the literature papers the chief fault was to write too much on certain details, thereby leaving too little time for the rest of the questions.

In the Grammar paper the Parsing was, as a rule, fairly correct, though there was a tendency to insert unnecessary and often incorrect information. The transitive and intransitive uses of verbs were not always clearly distinguished. The names of the stops were in most cases misspelled, and too many described their appearance—*e.g.* a semi-colon is a full-stop over a comma—instead of their uses.

The Essays were satisfactory, on the whole, though very few were really good—either too much or too little was written. The chief defect was lack of method and arrangement.

**Lower Forms.**—English Grammar: The Analysis was generally well done, though in some cases candidates were inclined to call the first word in every sentence a subject. The Parsing was good. More practice is needed in punctuation and in the type of question that asks for clear proof that candidates know the difference in meaning between pairs of similar words.

Dictation, &c.: It cannot be too earnestly brought to the notice of candidates that in reproduction a clear piece of correct English is required as well as the salient points. A breathless composition, without proper stops, however full it may be of the points of the story, cannot win many marks. In far too many cases the candidates seemed wholly to overlook the style of what they wrote. The spelling was, on the whole, very weak. Very few papers showed careful handwriting.

English Literature: The writing was often careless. More attention needs to be paid to spelling and punctuation, and apparently more practice is required in the writing of answers. There was too frequent evidence that the subjects had been read without much intelligence, and very little knowledge was evinced of the actual events alluded to in the "Poems of England." Question B4 was generally quite misunderstood, the only answer given being the names of the poems in which the passages occur. Paul Revere was often dated a century too late, and very few knew the meaning of "ballast."

### English History.

**Senior.**—The work of the successful candidates was often very good—showing adequate and thoughtful preparation. Among those who failed a good many were far below the standard of the Senior Grade. The spelling and handwriting were often defective.

**Junior.**—A larger number than usual wrote intelligent answers to some questions, and many could describe a Roman camp and town, and the arming of a Roman soldier. The Tudor and Stuart periods were the best known; the Anglo-Saxon period was evidently very difficult for Juniors, the answers betraying much learning by rote. Elizabethan worthies were well known, but many added the facts they knew about Raleigh to those which they related about Drake. Charles I was often described as a Roman Catholic, but better replies than usual were given to the question on the causes of the Civil War. While something was known about Canning's foreign policy, Gladstone was often credited with championship of Turkey as a small nation. The "constitutional" questions generally proved hard; a very small minority showed understanding of what the Model Parliament was, many had learned some clauses of the Bill of Rights; the old confusion with the Petition of Right has almost disappeared. The Toleration Act was often mixed up with the Declaration of Indulgence.

**Preliminary.**—The standard of many was, on the whole, satisfactory, and most of the candidates seemed to have received a sound training in the fundamental facts of the history. The questions were sensibly answered, and a pleasing sign was the care expended on handwriting and expression. The chief fault was the repetition of what had evidently been learnt from dictated notes. Teachers of history should avoid this method of giving instruction.

### Geography.

**Senior.**—The work, as a whole, was hardly up to the Senior standard, and the handwriting and arrangement were poor. The knowledge shown was general and elementary, and there was little power of reasoning. A lack, too, of up-to-dateness was noticeable, and was especially marked in discussing questions relating to such countries as China, West Australia, or Brazil. On the other hand, improvement on preceding examinations was to be seen in the drawing of contour and sketch-maps, in the explanations of map projections, and in pure climatic exercises.

**Junior.**—These papers generally were well done, especially the maps. Many candidates found a difficulty in explaining why in Europe we have hot and cold seasons, while there are wet and dry seasons within the tropics; while others did not understand the influence of mountains on the rainfall. The answers to the questions on the minerals of Canada, the climate of Queensland, and the characters of the central Australian desert were rather weak.

**Physiography:** Few took the Physiography section of the paper, and the answers were inferior to those on the rest of the paper, many failing badly, and showing they had received little special teaching in Physiography.

**Preliminary.**—The answers to Question A 4 (a) were hardly satisfactory, most candidates assuming that the presence of Liverpool made the Mersey mouth important, without suggesting that conditions in the Mersey might account for the presence of Liverpool. Some candidates contrasted the Mersey with the Dee in Aberdeen. The explanations asked for in Question B 8 (b) were weak: very few candidates suggested that the northern latitudes of Norway resulted in a lower snow line.

**Lower Forms.**—The map was fairly well filled in, though many candidates failed to realise that the square is designed to denote the site of a town, and not merely an appendage to the name. In many cases it was placed in the sea or attached to all names put on the map. Many students draw squares, shaded hills, or described rivers, but attached no names, and in some cases mountains were placed across rivers. In Question 8, though most candidates seemed to know that sheep were usually pastured on hills, few, if any, ventured to suggest reasons. In Question 7, which was excellently done in some cases, much doubt existed about the right bank of a river; few knew what is meant by "head of navigation," and "hardware" was frequently interpreted as earthenware.

**South Africa.**—The only question candidates found difficulty in answering was the one on the kind of climate required for the growth of different kinds of plants.

### Arithmetic.

**Senior.**—In decimalisation the work was not, as a rule, carried to a sufficient number of places to obtain the required degree of accuracy. The work on proportion and percentages was poor; in the latter the most frequent blunder was to take the percentage profit or loss on the selling price instead of on the buying price. Very few were able to obtain the correct answer in a sum of a familiar type on the volume of wood in a box of given dimensions. There should be no difficulty if pupils were taught to obtain such volumes by the simple method of subtracting the internal from the external volume.

**Junior.**—Failures in method occurred in the square root, pairing off the figures from the beginning instead of from the decimal point; in the partition of money, dividing by 3, 4, 5 in the G.C.F., giving the wrong number as the G.C.F. even when the work was correct; in Question 8, 21 lb. was often taken as  $\frac{3}{8}$  of a ton instead of a hundredweight. The most frequent mistake in the first part of Question 2 was dividing by 2.54 instead of multiplying, but a good many went wrong in changing from centimetres to metres. In the second part some omitted to square the 2.54. The chief mistake in Question 9 was taking 5 per cent. on the given net amount, though a good many confused the net amount with the discount, and others made the gross amount less than the net.

**Preliminary.**—In some papers questions that might have been worked out in a line or two filled a page, and then it sometimes happened that the candidate ended by misinterpreting his results. Time after time the like errors cropped up—e.g.  $\frac{1}{2} = 0$ , ignoring the point altogether or misplacing it when working in decimals, confusing square measure with linear.

**Lower Forms.**—There was much confusion in Question 6 as to the number of entire days and the difference between a.m. and p.m. Very few saw that the answer to the second part of Question 7 could have been easily obtained from the first part. Shorter methods might well be cultivated for working the items of the "Bill."

### Algebra.

**Junior.**—The average candidate's work was good in parts, he had learnt factors and fractions but knew little or nothing about equations,

or his equations were very well done and the rest of the paper very weak. The graph, when attempted, was generally done pretty well. In many sets of papers no attention seems to have been paid to graphs, and too often time was wasted over hopeless attempts at the hard quadratic at the end of the paper by candidates who did not know how to solve correctly the easy quadratic given earlier.

**Preliminary.**—Carelessness in reading the questions resulted in the substitution of addition for subtraction, or of multiplication for division. In Question 5 (i) the answer was frequently set down thus:  $(x-8)(x-2)$ ; and in other cases (such as the equations) a simple operation would have disproved the assumed result. In (iii)—by many  $-(x^2-y^2)$  was not broken up. Question 8 (i) and (ii) should have been more systematically treated, stage by stage; there would then have been no cases where the result would be shown to be zero, or where a numerator was set down, but no denominator.

**Lower Forms.**—In Question 5 the definitions were satisfactory, but, in many cases, the subsequent division was not carried far enough. Question 8—in general—was a failure; in far too many instances, even when the diagram was correct, the right conclusion was not drawn. In a few scripts it was assumed that the border was to be placed *within* the edge of the carpet. Candidates should be warned to set out the successive steps of the solution, and to refrain from placing different sums side by side. In a large number of cases relating to simplification and factorisation, the steps leading to the result were lacking.

### Geometry.

**Senior.**—As a rule, the practical geometry was well done, and this was all the more satisfactory as the questions were chosen so as to require for their solution a knowledge of geometry rather than of geometrical drawing. The theoretical portion of the paper was not done so well. Mistakes in cases of congruent triangles occurred much more frequently than they should do in an examination for Senior certificates. As regards the riders, unjustifiable assumption of everything but the last step in the proof was the rule rather than the exception.

**Preliminary.**—The propositions were by no means generally known, and in many cases were written out carelessly and with essential points ignored. The two easy constructions were usually done well, but the proofs and statements, and the poor attempts to solve the riders, showed that geometrical reasoning, as apart from the mere learning of propositions, had failed to find a place in the education of the majority of the candidates. The ideas on equality of area were extremely vague, and there appeared to be a fairly general impression that two triangles on the same base and of equal perimeter have the same area. Such a mistake could not occur so frequently if the propositions on triangles and parallelograms between the same parallels were made fundamental in the teaching of this portion of the subject.

### Mechanics.

**Senior.**—The easy question involving a knowledge of friction was seldom done correctly, and the meaning of the term "efficiency," as applied to machines, was not understood. There was also the usual confusion between momentum and energy, and in the designation of dynamical units, e.g. force measured in *foot-pounds* occurred several times.

**Junior.**—The work of the candidates in this subject was spoilt by numerical inaccuracy and failure to write their work out intelligibly. The "triangle of forces" was not really understood, and an easy question on centre of gravity was not well done.

### Book-keeping.

**Senior.**—The terms in Question 1 were better attempted than usual. Question 2 (Consignment Account) was well done by few. The form of Bill of Exchange was generally well drawn, but too many failed to notice that the interest was for *six months*, and calculated it for one year.

**Junior.**—The Cash book was fairly well done, but candidates were weak in discounts, and too many entered in this book *Rent due*. The calculations in the Journal opening entry and in the Bought and Sold books could have been improved. The Ledger was fairly well done. Part B, Question 1, when attempted, was usually well done, but all omitted the *due date*. Question 2 was badly answered.

**Preliminary.**—Cash Book and the Journal were fairly well done. As in the past few examinations, the greatest number of errors occurred in the simple calculations required in "Int. on capital" (taken for one year instead of one month) and "rent due" (taken as paid). Ledger posting and the definitions of the terms in Question 3 were better than usual.

### French.

**Senior.**—Though there were some good papers, the work as a whole was not good. The elementary knowledge of accidence and syntax was not firm. Consequently, the attempts at using the language were marked by a series of blunders which usually produced hopeless confusion. Many candidates could not manage even the most elementary constructions in Question 6. For "Is this dog yours?" they wrote *Est ce chien votre?* "Yes, he is mine": *Oui, il est me; il est mien*, &c. For "Why did she not defend them?" *Pourquoi les ne a-t-elle défendu pas?* &c. This part of the paper will not be better done till the elementary syntax and accidence are properly learnt and assimilated, so as to be ready for instant use. The knowledge of vocabulary was also limited and uncertain; many candidates did not know that *plumes* means "feathers" and *cire* "wax." In consequence, the translation into English was disfigured by wild guessing.

**Junior.**—There was a definite falling off in the standard of the work. The piece of translation into English was rarely done with intelligence or care: the words seemed to be known, but the sentences written often made no sense. The whole of the paper, including the composition, was attempted by nearly every candidate; but a very large number wrote French with an obvious lack of confidence in their powers. The alternative question, involving a use of phonetic symbols, was attempted by two candidates, but the attempt was not serious.

**Preliminary.**—The failures were due to a weak vocabulary, shown in the translation of the French passage, and ignorance of the most elementary rule of grammar, particularly of the verbs. Only very few took advantage of the easy and simple alternative question on the phonetic transcript.

**Lower Forms.**—The failures were due chiefly to ignorance of the verbs and of concords, and of grammar generally. The translation into French showed great weakness. Only one candidate attempted the question on phonetic transcript, and did it badly; all should attempt it and do it well, as this is an essential in modern language teaching.

### Welsh.

**Senior.**—Candidates depended too much on their colloquial and popular knowledge of the language, and few showed literary taste in their translations from the one language to the other. They should read more widely, and have more exercise in essay writing. The grammar of the noun and adjective was well known, but the verb and other parts of speech, together with the syntax, require more close attention.

**Junior.**—The grammar of the noun and the adjective was fairly well known by all the candidates, but their knowledge of grammar required a larger range and more exactness. The translations were generally well done, but lacked idiomatic expression and correct apprehension of the finer shades of the meaning of words and phrases. This defect could be removed by wider and more constant reading of Welsh books.

**Preliminary.**—The knowledge displayed by the candidates was slight and fragmentary, and not up to the usual standard displayed at this stage. The translations were poor and the grammar sketchy.

### Latin.

**Senior.**—The set books had been in many cases carefully studied, and the questions on accidence were correctly answered; but those involving points of syntax were not so well answered. The compulsory unprepared translation, the translation into Latin, and the Latin etymology of given English words were the weakest points.

**Junior.**—The translation and subject-matter of the set books had been fairly well prepared. Where unprepared translation was taken in lieu of these, the results furnished clear evidence of want of practice and of proper training. The renderings of the obligatory unseen passage were moderately good on the whole, but there were many failures through a flagrant disregard of grammar. The general average of the work in grammar was creditable. The easier questions were well answered on the whole, though there was much random guessing as to genders; and verb-accidence and parsing had on this occasion received adequate attention. The composition was disappointing. Only a very small percentage showed a sufficient grasp of ordinary constructions; while even those who had acquitted themselves well in accidence and elementary syntax sent up copies teeming with gross blunders.

### Light and Heat.

**Senior.**—The grease-spot photometer was usually chosen in answer to Question 1, but the description was feeble and the "general principle" underlying it received no elucidation at all. The critical

angle was seldom mentioned in the answers to Question 3. Even the simple telescope was not understood except in the case of two or three who gave quite good answers. Many thought that saturation pressure is the pressure of the air when it is saturated with water vapour.

**Junior.**—Question 1 was a popular one and was generally well answered, but too often there was no reference to the fact that light travels in straight lines. In the answers to Question 2 there was too great a tendency to display the artistic faculty at the expense of the scientific side of the problem. In regard to Question 4 there were too many answers indicating that light leaves the eye. This idea was once entertained, but is so no longer. In the answers to Question 6 many candidates seemed to think that from 0° to 212° is the limiting range within which temperatures are measurable on the Fahrenheit scale, and expressed preference for the Fahrenheit scale on account of "its larger range" compared with the Centigrade scale! Some candidates confused specific heat and conductivity in connexion with Question 8. There was no mention of convection in connexion with ventilation (Question 10).

### Magnetism and Electricity.

**Senior.**—No candidate could define magnetic force; only one worked out the numerical problem correctly. Question 2 deals with a subject which is very easily dealt with in schools and always proves interesting; but the candidates had little acquaintance with it. No correct definition appeared of unit quantity of electricity. Even such a fundamental experiment as Faraday's bird-cage experiment was not understood. One group of candidates showed familiarity with electromagnetic telegraphic apparatus. Schoolmasters should find this a very attractive subject, though there are difficulties connected with it.

**Junior.**—The answers to Question 2 were good, but the fact that iron is more easily magnetized than steel was, as a rule, omitted. No knowledge was shown of magnetic declination. The description of an electrophorus (Question 5) was usually fair. In connexion with Question 6, it is well to point here that hydrogen is not deposited on the zinc, and is not removed by amalgamation of the zinc. There was a remarkable confusion between electroscopes and galvanoscopes in reply to Question 7. No account was given of a practical application of an electromagnet.

### Elementary Physics.

**Junior.**—The answers were well distributed over the whole paper, and the question on the triangle of forces was the only one seldom attempted. The use of the spirit level was well known, though the glass tube was usually described as being straight. The first part of Question 3 was, as a rule, very good, but the very easy calculation which followed seems to have presented far more difficulty than it should have done. The definition of work was very poor. The remarks about diagrams in the report on the result of the Elementary Science (Preliminary Grade) examination apply to Question 7. The drawings showed a recognisable, but quite unscientific, balance; hardly anyone had noticed, for example, that the knife edges are always fixed to the beam of the balance. In Question 8 only one candidate realised that placing the lid on the kettle would stop the continual loss of latent heat by evaporation, which otherwise occurs.

### Elementary Science.

**Preliminary.**—The candidates' knowledge was scanty, and they spent far too much of the time available for answering the questions in making elaborate, unscientific, and utterly futile sketches of balances and boxes of weights (Question 1), of test tubes (Question 4), or evaporating dishes (Question 6). It is probable that, to a certain extent, the teachers are responsible for this. Such sketches make the laboratory note-book imposing to the untrained eye, but from a scientific point of view diagrams, however crude, embodying the results of accurate observation are infinitely better. The drawings of a water distillation apparatus sent in by one batch of candidates formed a terrible example of the result of this kind of teaching; seen from a distance they looked quite the real thing; the details, however, were simply idiotic. The questions on chemistry were answered most satisfactorily; none of the candidates could define pressure, and there was no correct answer to Question 4, the idea of latent heat being unknown.

### Chemistry.

**Senior.**—A general weakness was again observed in the knowledge of preparation and properties of metals and their salts. A senior candidate should be able to represent the action of heat on lead nitrate or sodium bicarbonate by a simple equation. In the practical examination the preparation of the crystals and the analysis were reasonably well done, but the results obtained in the simple volumetric problem were disappointing.

**Junior.**—The question involving a simple chemical calculation was generally answered inaccurately; and very few candidates could describe a satisfactory method for determining the composition of ammonia, or appeared to understand the significance of the replaceable hydrogen atom of an acid. The character of many of the answers in describing experiments, or properties of substances, showed insufficient acquaintance with practical work. In the practical examination the experiment involving the operation of weighing was generally satisfactorily carried out; but the action of heat and dilute acid on a substance was not keenly observed, and very few candidates identified the resulting gas—sulphur dioxide. Considerable importance was attached to the preparation of crystals, and it is satisfactory to note that most of the candidates appeared to have had some experience in that type of work.

### Botany.

The work in both grades (Senior and Junior) showed a distinct improvement on that of previous examinations, along the lines suggested in earlier reports. But many candidates still show an almost total ignorance of Botany and extreme weakness and carelessness of expression. In the Senior papers the improvement is distinctly noticeable, both in the matter of diagrams and of general accuracy. Only very elementary knowledge is expected, but this must be clearly and accurately expressed.

### Drawing.

**Senior.**—Drawing from Models: Where the gramophone was chosen the relations between the parts were generally better observed than in the chair and basin. But in both subjects the comments on recent examinations apply to this one: there was the same perception of flatness, the same weakness about ellipses (although this was less marked), the same pervading lack of really intelligent application of perspective rules. Very creditable drawings were not rare, but those which exhibited neither performance nor promise were far too numerous.

**Drawing from Memory:** Memory of facts and memory of appearances are naturally at first unequally—often very unequally—developed, and need practice to bring them into due relation. It is suggested that drawings should, at least for a time, be made more definitely according to rule as to appearances, even to the extent of virtual "cramming": this should produce not merely higher marks, but more practically useful drawings. On the whole, the results of this section are more encouraging than those in Model Drawing.

**Junior.**—Drawing from Models: The general remarks on the Senior Grade apply at least equally here. The greater the number of separate objects in a group, the more numerous are the opportunities for faulty proportion; in this case the drawing board was sometimes shown as absurdly large, the books absurdly thin, the plates absurdly small.

**Drawing from Memory:** This section, when attempted, was usually thoughtfully done, some drawings showing real ability. In a few cases mere elevations were given, to avoid difficulties—but it should be understood that high marks are avoided at the same time.

**Drawing from the Flat:** The chair, though somewhat complex in form, proved to be a subject in which certain limitations and proportions were obvious to most candidates. The commonest defects of "middling" drawings were shortness of leg and wrong slope of back—usually made too upright. But something of the "character" of the chair was preserved, even if in caricature, except in the feeblest drawings.

As noted in several previous reports, methods of setting out were often non-existent, and quality of line was not seldom very unsatisfactory. In some instances teachers have evidently not sufficiently realised the meaning or value of freedom of hand or arm.

**Preliminary.**—Drawing from the Flat: While a feeling for the character of leafage was pretty general, many candidates did not give adequate attention to the plan of the main forms. When the large areas are carefully placed of the right size and shape a good mass-form is thus created for the addition of details, but if that is lacking the effort made can only lead to an unsatisfactory result. Notwithstanding the shortcomings of a certain proportion of the candidates, the average quality of work submitted was maintained.

**Model Drawing:** The ellipse (in the horizontal position) appears to have been fairly well studied, the attainment therein being on the whole somewhat better than heretofore. There was also a rather better appreciation of the manner in which receding horizontal lines seem to rise, and the amount thereof. The apparent convergence ("vanishing") of parallel retiring lines was less satisfactory. This should not be so, as it is the most readily demonstrable phenomenon in model drawing. Only the best of the candidates and a very few others showed a reasonable understanding of this matter. The number of papers presented was relatively small, which seems to indicate that the study of this most valuable subject is postponed longer than is desirable.

**Lower Forms.**—It has many times been urged that the proportion of one part to another in a freehand example needs more study than is generally given. The lack of attention to this important matter is again conspicuous. In a large number of candidates' essays the hatchet-like part of the halberd was well done to a scale of one-third or more greater than the original, but the length of the spear-point above it was hardly increased at all. It is evident that a very considerable number made no attempt to secure equality of enlargement throughout. This stricture applies not only to the weaklings, but also to many who, but for this failing, would have gained high marks. Some candidates endeavoured to secure just proportion mechanically by dividing their space into small squares or rectangles,—a practice which is forbidden. On the other hand, there were hardly any very poor drawings, while many displayed a quite useful power of drawing curves of simple form gracefully and accurately.

### Political Economy.

About half showed some knowledge of economic principles which will be of use to them, but a higher standard is very desirable.

A cordial vote of thanks to the Chairman for presiding terminated the proceedings.

## STORIES ILLUSTRATING THE ECONOMIC SIDE OF LIFE.

HARRIET MARTINEAU, in her "Autobiography," tells of a wheelbarrow-load of letters which the local postmaster brought to her from correspondents who admired her popular tales in illustration of political economy. My present purpose is not so ambitious as hers, nor can I hope to awaken such enthusiasm. I merely wish to show how phases of industry may be illumined with human interest for children. And, as the exploitation of natural resources and of man's inventive powers is assuming enormously increased importance as a result of war expenditure, the topic may be worth the attention of educators. In a simple and miscellaneous way I propose to lay before the reader a few anecdotal notes, and then to dignify the subject with a sort of philosophical conclusion. During more than twenty years I have collected some thousands of brief stories, biographical and other, as material for use in moral and civic instruction, and, in the course of this quest, I have often hit upon the type of illustrations which I am now drawing from.

Mr. Edward Carpenter relates how County Council lectures on dairy work were arranged in a Yorkshire village, how a sparse audience attended on the first occasion, and a sceptical farm labourer asked what was the good of lectures by a gentleman who had probably never milked a cow in his life? The expert thereupon issued a challenge to the sceptic, and a week later the lecturer and the labourer milked cows on the platform under the gaze of an excited crowd, and the lecturer got more milk and in less time than his competitor. After that the course of study became popular. Behind this amusing anecdote lurks the truth that scientific method makes for efficiency, both individual and communal. If you have your pupils in a receptive mood you can send home the same idea more systematically by presenting as simply and picturesquely as you can the work and lifelong comradeship of Gilbert and Lawes on their famous agricultural experiment station in Hertfordshire.\*

Teachers, like their pupils, differ widely. Some would glory in telling the tale of Gilbert and Lawes with blackboard sketches of the Rothamsted crops. Others would prefer to invest industry with the charm of legend, and for such disciplines of romance one may offer an Oriental story thus:

An Indian prince, named Hate-rain, married a Chinese princess, named Hate-sun, and they had a fair daughter, named Girl-with-golden-hair. The mother died, the king married again, and the step-daughter's life was made a misery, and yet she rose triumphant out of every affliction—as, indeed, human industry has a genius for doing. Poor Goldilocks was exposed to lions, and, like Spenser's Una, rode home on one of these obliging beasts. Cast out into a wilderness, she was fed by vultures, found by one of the king's courtiers, and brought to the palace. Left on a desert island, she was rescued in a fisherman's boat. When she was buried in the earth of the royal courtyard golden rays shot up and astonished the

\* See A. D. Hall's "Book of the Rothamsted Experiments." Second Edition. 1917.

king, who had the spot dug up, and out came Golden Hair. Then the king packed her in a hollow mulberry tree-trunk; she floated to Japan, and died in the arms of a Japanese on the seashore. Now Golden Hair was the cocoon of yellow silk which first China, then India, and then Japan utilized for manufacture; and it is said that Japanese silk-growers still denote four phases in the life of the silkworm by the terms Lion, Vulture, Boat, and Court.\*

And, while speaking of silk, we recall the origin of its artificial lustre. In the seventeenth century Octavio Mey, a citizen of Lyons, lost money, and, in his vexation, he gnashed a scrap of silk between his teeth. Taking it from his mouth, he perceived that the combined moisture and heat had imparted a singular brightness. Our smart Lyonnais seized the hint, patented it, and made a fortune! Thus from Rothamsted, Japan, and Lyons one gets three methods of illustration—the scientific touched with personal interest, the legendary, and the biographical or anecdotal.

Take one or two stories or sketches in the personal sphere. For example, Mr. Alfred Williams's description of Abraham Ashton, the witty old fellow—with bright eyes, prominent nose, clean-shaven face, red cheeks, fringe of hair under chin, and a billycock hat—who had spent his life in shepherding on the Wiltshire downs. A sack would cover his shoulders, a second sack girdle him when he bore a sackful of turnips to his flock. In some seasons his ewes produced 1,200 lambs, and his care of them was fatherly, and hard was his labour when his charges caught the plague. At the age of seventy-five he was found dead in the fold surrounded by his sheep, with his head pillowed on the grassy bank in a lonely part of the Downs.†

Similar sketches occur in W. H. Hudson's writings. I once applied to two distinguished Irish literary persons asking for biographies, especially of farmers or artisans, and all I got was a heap of references to politicians, poets, and saints. Some time ago I begged an Ulster friend for the biography of anybody connected with flax and linen, and I am still waiting with a faint hope!

A very different type was Frédéric Le Play (1806-1882), the celebrated French sociologist. Born in a poor environment, a miner, a student of mining science, and then a lecturer at the Ecole des Mines, he developed a passion for intensive research into social conditions. Year after year, in the summer months, this eager Frenchman—small in figure, with steel-like jaws, but pleasant manner—travelled, mainly on foot, in Spain, England, Scotland, Ireland, Russia, Germany, Denmark, Sweden, Norway, Belgium, Austria, Hungary, Turkey, &c., compiling notes and statistics of the life and labour of European workmen. His lodgings and meals were often wretched, but Le Play went on untiringly, and his monument remains in his volume on "Les Ouvriers européens" (1855).

Yet another type is seen in Rochefoucauld-Liancourt (1747-1827), the French prison reformer and founder of technical schools. Visiting England, he was received at court, and was considered dull. Walpole, on the other hand, observed that he had spirit, and was free from affectation. Liancourt found himself at home in English factories and on farms, where he studied facts with a keen eye, and amassed knowledge which he turned to account in administering his own estates in France. He greatly admired Voltaire's aphorism that the man who made two blades of grass grow where only one had grown did a service to the State.

That conception of commonwealth service is vital, and it can be rendered interesting in many modes. For instance, we may recall how, the year before the Great War, Mr. Runciman, then President of the Board of Agriculture, gave an open-air address to two thousand agriculturists at the inauguration of a Farm School at Madryn Castle, Carnarvonshire, and in the course of his remarks said:

During his tour of Lleyn Peninsula that morning he had noticed many patches of land lying waste. In Holland or Belgium or Denmark a square yard of waste land would be regarded as a sin. He hoped that the time would come, and come soon, when waste land would be regarded in the same light in this country, and the farmers would be getting full value from the soil upon which they lived.

\* J. B. Giraud, "Les origines de la soie." Lyons, 1883.

† A. Williams's "Villages of the White Horse." 1913.

The schoolboy who could understand this incident would also be able to supply a comment suitable to the year 1918.

A more exhilarating case is the following. Réaumur (d. 1757), whose name is commemorated in a thermometer, was in boyhood days eager for inquiry, and studied shells and marine creatures on the shore near his native Rochelle. France was dependent for steel upon other countries, especially Germany. Réaumur discovered in 1725 a method of making steel from French ore. The Government awarded him 12,000 livres, which he accepted on condition that, after his death and under the control of the Academy, the money should be used for industrial research. To this noble patriotic action may be added the curious item that Réaumur made silk from spiders' webs, and a work of his on this manufacture was translated into Chinese.

One may pass from such levels to a yet higher region of romance and art without quitting the realm of the economic and material life. We stand in a coal mine, and we also stand before the Ideal when we look at Guillaume Charlier's statue of the Belgian pit girl in trousers, close-fitting jacket, with hair-plait on neck, holding a lamp in her left hand, with bare feet, and with right hand held towards the forehead, making the sign of the cross.\* Such a figure expressed a profound pathos when it was carved, and it means still more to us in presence of the labours of womanhood during the War. But, as one must not overdo even story-telling, I bring this series to a close with the legend of a bridge. A bridge is rigidly economic when it is used for traffic, and yet the poets have never failed to perceive its symbolic beauty.

The thirteenth-century bridge of thirty arches, named the Pont Saint-Esprit, crosses the Rhone above Avignon. It took fifty years to build, and was constructed by the Pontiff Brothers or Bridge-building Monks. Country folk say that an angel of light appeared to a shepherd who watched his flocks on the bank of the Rhone, and gave him the exact plan of a bridge to be erected at a spot where many boats had been wrecked and lives lost. A companion legend tells of a monk who dreamed that he saw tongues of fire descend upon the Rhone as indicative of the position of the arches, and these flames intimated the co-operation of the Holy Spirit. And when every day twelve Pontiff Brothers laboured at the structure a mysterious Thirteenth, very industrious and skilful, but always silent, joined the company. He—celestial Spirit, and, to these simple people, the representative of both inspiration and pride of craft—was first on the scene at sunrise, and the last to leave at dusk, for he always stayed behind to repair mistakes, and make the bridge firm for ages to come.†

I am conscious that the group of tales and incidents just given will appear somewhat of a medley. Having stated this accusation before the reader has had time to throw it at me, I venture on two propositions:

1. The education of the future, even in its elementary stage, will devote increased attention to the agricultural, mining, and manufacturing industries, which will form the base of our reconstructed civilization.

2. In the case of younger children (say to the age of thirteen or so) the technical side of such subjects should be subordinated to the human and moral elements—in other words, lessons on industries should be adorned with biographical and aesthetic illustrations, of which a few random examples have here been adduced.

And my philosophical conclusion runs thus:—That the story of industry is but one theme in the history of humanity, that is, the history of the soul of our race, which combines in a vast complex moral, artistic, literary, scientific, and economic elements. These elements are interconnected, so that none can be rightly appreciated except in relation to the others. Hence industry, economic and inventive, should never be treated as a bit of detached technique, but always be "touched to fine issues" by human sentiment and biographical interest, and finally by poetry.

FREDERICK J. GOULD.

## THE COLLEGE OF PRECEPTORS.

## MEETINGS OF THE COUNCIL.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 27th of February, 1918. Present:—Sir Philip Magnus, President, in the Chair; Dr. Armitage-Smith, Mr. Bain, Mr. Brown, Mr. F. Charles, Mr. R. F. Charles, Mr. Eagles, Mr. Hardie, Mr. Hawe, the Rev. R. Lee, Mr. Longsdon, Mr. Maxwell, Mr. Millar Inglis, Mr. Morgan, Mr. Rawlinson, Mr. Roscoe, Mr. Rushbrooke, Mr. Starbuck, Mr. Thornton, and Mr. Vincent.

Diplomas were granted to the candidates who had completed their qualification at the recent Winter Examination of Teachers (for list see page 54); and the prize for Theory and Practice of Education was awarded to Mr. Clifford William Towson.

Mr. Brown was elected one of the College representatives on the Federal Council.

Mr. G. P. Dymond, M.A., and Dr. A. E. C. Dickinson, M.A., LL.D., L.C.P., were elected members of the Council to fill the vacancies declared at the last meeting.

The following persons were elected members of the College:—

Miss D. Searle, A.C.P., 1 Richmond Road, Ilford.

Mr. A. Temblett-Wood, Collegiate School, Winchmore Hill, N.

A grant of £10 from the College Benevolent Fund was made to a Life Member of the College.

The following books had been presented to the College since the last meeting of the Council:—

By Dr. C. W. HAIG BROWN.—Haig Brown's Charterhouse Past and Present.  
By Mr. J. S. THORNTON.—William Haig Brown of Charterhouse.

By the CAMBRIDGE UNIVERSITY PRESS.—Bosworth's Agriculture and the Land; Lobban's Shakespeare's Antony and Cleopatra; Thompson's Selections from Wordsworth; Sampson's Hazlitt—Selected Essays.

By the OXFORD UNIVERSITY PRESS.—Oxford Plain Text Shakespeare (Antony and Cleopatra, Cymbeline, Othello, Romeo and Juliet, The Winter's Tale); Oxford French Plain Texts (La Grammaire, Le Voyage de Monsieur Perrichon, Gringoire); Oxford Russian Plain Texts (Saltykov's Pilgrims and Wayfarers, &c.); Fairbridge's History of South Africa.

By the UNIVERSITY TUTORIAL PRESS.—Welton's Groundwork of Logic.

Calendar of the Pharmaceutical Society of Great Britain.

Calendar of the University of Birmingham.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 23rd of March, 1918. Present: Prof. John Adams, Vice-President of the Council, in the chair; Dr. Armitage-Smith, Mr. Bain, Mr. Barlet, Mr. Cholmeley, Dr. Elizabeth Dawes, Dr. Dickinson, Mr. Gregory-Taylor, Mr. Hay, the Rev. R. Lee, Mr. Longsdon, Mr. Maxwell, Mr. Millar Inglis, Mr. Morgan, Mr. Rushbrooke, Mr. Somerville, Mr. Thornton, and Mr. Whitbread.

The Diploma of Associate was granted to Mr. Arthur James Elgar, who had satisfied the prescribed conditions.

The Council accepted, with thanks, an offer from Mrs. Caroline Bailey to present to the College the late Dr. Hopkins's Diploma of Doctor of Philosophy of the University of Giessen.

On the recommendation of the Finance Committee, the price of the reprints of the College examination papers in Series A was raised from 1s. 2d. to 2s. a copy, and a contribution of £2. 2s. was made towards the funds of the Imperial Union of Teachers.

On the recommendation of the Examination Committee, the Council adopted a scheme for the oral examination of Junior and Preliminary candidates in Modern Foreign Languages, and abolished the regulations under which candidates were allowed to receive certificates of a lower grade than that for which they entered.

The following persons were elected members of the College:—

Mr. G. W. Calvert, B.Sc., L.C.P., Lynton, Stakesby Vale, Whitby, Yorks.

Mr. C. W. Towson, M.A., L.C.P., West Bank, Skipton, Yorks.

The following books had been presented to the College since the last meeting of the Council:—

By the OXFORD UNIVERSITY PRESS.—Herbertson Thompson, and Howarth's Geography of the British Empire; Hugon's Selected Fables of La Fontaine; Rudmore Brown's Racine's Andromaque; Tindall's Brockmann-Chatrains Madame Thérèse.

By KEGAN PAUL, TRENCH, TRUBNER, & Co.—Patterson's Colloquia French. Calendar of the Birkbeck College.

## REVIEWS.

*The Play Movement and its Significance.* By Henry S. Curtis. (8s. net. Macmillan.)

Dr. Curtis has already established his reputation as a specialist in play, and in this volume deals with the subject in its widest aspect. His thesis is that "everyone wants to have a good time, and does not care to live where he does not." Accordingly, it is to the material advantage of all land and property owners to further the provision of means to favour this good time. Mr. Curtis almost shamelessly insists upon the self-interest that ought to encourage townships to promote play and recreation schemes within their borders. He has elaborate calculations on the amounts that would be saved if each community made its surroundings so attractive that nobody would be tempted to leave home and spend their good money among strangers. He points to Switzerland as a happy illustration of the commercial value of the tourist, and openly grudges America's contribution to the Swiss coffers. But he must not be carelessly dismissed as a money-grub. He reminds us that "down in his heart everyone knows that what we are really after is not money, but happiness," and one cannot help thinking that Dr. Curtis's appeal to the cupidity of the "realty" man—i.e. the dealer in real estate—is merely a deliberate plan of getting that hard-hearted individual to fight, "for a consideration," on the side of the angels. Indeed, when he gets to grips with his real subject, and is able to forget its merely economic aspects, our author insists upon the need for more humane living and less money-grubbing. He wants his fellow Americans "to work more moderately and to find more joy" in their work. The reader cannot help being pulled two ways by the appeals Dr. Curtis makes; and it is, perhaps, fair to maintain that he himself has a struggle to reconcile his ideals with the "enormous development of pleasure resorts, the shortening of working days, the vast increase in attendance at the theatre and the opera." His treatment of the auto supplies an example of this double attitude: in some aspects he regards it as an evil influence, in others a good. In any case, he has no brief against honest work. His argument is that it is not a conflict between work and play, but between play and idleness. He holds that in the past that form of house and farm work that his countrymen call "chores" filled up the time not unprofitably so far as real education is concerned; but he has come to the startling conclusion that chores are no longer demanded from young people, and that therefore something like organized play must take their place. He thinks that there has been less play in the world during the past half-century than at any other time during the history of the world, and is not altogether surprised, for: "It must be remembered that play was everywhere looked upon at first as amusement, and that it is only lately that it has been perceived as the fundamental thing in education."

Though school play gets a fair amount of attention in this volume, those who are specially interested in this aspect will find the matter more fully treated in the author's previous works, particularly in his "Education through Play." The present book justifies its title by the width of its treatment. Dr. Curtis believes that we are approaching the time when municipalities "must take over and maintain the moving picture shows, dance halls, and social centres, from pure self-defence." The prospect does not seem to daunt him, and it cannot be said that he does not consider historical parallels, for he refers placidly to the bread and circuses of decadent Rome, and a modern parallel that he finds in Porto Rico. His implied argument is that in our day it is not an autocratic outsider who provides sports as a bribe, but a sovereign people that demands a proper organization of its own resources.

Perhaps from the very nature of the book there is a fair amount of repetition to be found in the text. But the reader can never complain of being bored. The author, in fact, has a way of saying things in such a way as to attract attention, even though the reader may resent what is said. English readers will not much relish that statement that "the English preparatory and public school have always been orphan asylums to all intents and purposes"; but the statement at any rate rouses thought. Again, women teachers in this country will be surprised to learn that their favourite gentle game, basketball, "is undoubtedly our most dangerous game, as the strain

of the play is almost continuous." So, too, it will come with a shock to some of our social workers that nursing is a form of recreation, that "the baby is the most successful piece of play apparatus that ever came from the hands of the Almighty," and that "the necessity for recreation of the tenement mothers is one secret of the large families on the East Side." Another thrill may be got out of our author's treatment of graveyards as playgrounds, though here, as elsewhere, he contrives to make out a much better case than one would have thought possible. On the other hand, he seems to have gone astray in the name he gives to the Camp Fire Girls' magazine. He calls it *Wahelo*, but should it not be *Wohelo*? We must speak with diffidence to an American about American things, but we seem to remember that this is a portmanteau word made up of the first two letters of each of the words in the motto of the organization: "Work, Health, Love." Again, Dr. Curtis has no doubt already repented of writing the sentence: "Virtue and virility alike come from the old Greek root, *virtus*, which meant courage."

In his concluding chapter, "What is the Cost?" Dr. Curtis positively revels in a subject in which he is quite at home. He cheerfully admits that he is dealing "exclusively with fictitious statistics." What counts is that in every case, in estimating the possibilities of gain from an efficiently organized recreation system, Dr. Curtis has adopted estimates much below what he would have been fairly entitled to assume, and that he makes out an excellent case. The book is provocative, interesting, persuasive, and highly suggestive. It deserves the serious attention of our educational reformers, who are now so busy with reconstruction schemes.

*The Advanced Montessori Method.* Vol. II. By Maria Montessori. (12s. 6d. net. Heinemann.)

Vol. I of this work really carries us no further than previous books by its author; but in this second volume we have her system extended to meet the case of pupils between seven and eleven. Its sub-title is "The Montessori Elementary Material," and the author boldly faces the problem of dealing in her special way with the various subjects of the elementary-school curriculum. To be more exact, her section headings are (1) Grammar, (2) Reading, (3) Arithmetic, (4) Geometry, (5) Drawing, (6) Music, (7) Metrics.

There is the preliminary difficulty of the translation. Prof. Livingston has succeeded in turning large portions of Mme Montessori's work into passable English, or any rate American, for his idiom is not always in accord with what we are accustomed to on this side of the Atlantic. But the mere literal translation is not his main difficulty. From the nature of the case, the subject-matter in several of the sections is inapplicable to English needs. In particular, grammar and metrics, and in a less degree reading, call for different treatment by English teachers as compared with teachers in Italy. Accordingly Prof. Livingston has been compelled to deal with these subjects in certain connexions by means of parallels. Instead of taking up the exact examples used by his author he has selected what he considers to be parallel examples from English materials. He has not been uniformly successful, but may fairly claim to have made a very useful presentation that conveys to the English teacher a not unfair view of what was in the mind of the writer of the original. The difficulty of manipulating the subject-matter of instruction emphasizes the objection often raised by hostile critics that the Montessori method is inapplicable to English children because, to a great extent, it is modified by the nature of the content of the Italian curriculum as compared with the English. But *mutatis mutandis* the method can certainly be applied to English circumstances. The fact that it is difficult to make the necessary changes in no way militates against the effectiveness of the method when they have been made. Perhaps, too, the complaints that have been made against the generality and abstractness of the first volume may be discounted by the fact that the author felt it to be necessary to justify the universality of her method.

When we come to the actual details of the teaching of grammar we have to admit that a good deal of what the author evidently believes to be new is really familiar to those who have a wide experience of school methods in England and America. But, while the dramatic methods, the use of

colours and movable letters, word building, and the other striking devices found in the text, may be paralleled from the progressive schoolrooms of the past score of years—indeed, many of them go much farther back and have quite a respectable antiquity behind them—there runs through Mme Montessori's scheme a consistent appeal to self-activity and individual freedom that gives character to the whole and justifies the author in claiming distinctive elements in her work. This applies throughout the book, though the critical reader will be anxious to point out that the underlying principle is made manifest more by illustrations deliberately selected to prove the author's point than by its consistent influence throughout all the suggested exercises. The majority of these exercises could be used, and frequently are used, without any reference to Mme Montessori's method.

When we come to reading, for example, what our author says about physiological mechanics and true reading is implicit in the discussion that has for long been going on about the place and value of "silent reading" and reading aloud. Most teachers will cordially agree with what we find here about interpretation, and the more advanced will accept the figure of the two "languages." But there is nothing specifically Montessorian in all this. On the other hand, progressive teachers will welcome, or at any rate *should* welcome, the support of an author who has caught the ear of the public in the way Mme Montessori deservedly has. It is hard, however, for the ingenious teacher of the rudiments of arithmetic to read the chapter on this subject without resenting the implication that she is reading something new, when, as a matter of fact, she has tried practically every one of the devices suggested. She may, however, feel her withers a little wrung when she comes across the mild revolt that Mme Montessori managed to raise among her pupils by rousing their interest in the multiplication table to such an extent that they were prepared to go on strike if they were not allowed to take home with them the materials to keep on constructing their tables. In geometry and drawing it would be difficult to select any point that has not already been found in the work of the myriads of ingenious persons who have been exploiting these subjects during the past twenty years. The same is true, perhaps in a less degree, with regard to the section on music. Metrics is practically ruled out of court for English readers, though the treatment is intensely interesting and, for those who know a little Italian, quite valuable.

When all has been said, the book justifies its position. Mme Montessori has made good in general her claim that her method can be applied beyond the infant-school stage; and, in view of the present uneasiness about class teaching, it is just possible that she may be able to demonstrate its application to still higher stages.

*A Textbook in the Principles of Science Teaching.*

By G. R. Twiss. (7s. 6d. net. Macmillan.)

The reviewer's first impression on facing a book like this is that no man has a right to take all science to his province in this way. His next thought is that no reviewer can honestly claim to know enough about all the subjects treated to be entitled to write as an expert on the book as a whole. Yet Mr. Twiss has been able to unify his material in such a way as to make his book a whole, and the conscientious reviewer may retain his self-respect and still comment on the author's mode of covering such an enormously wide field.

We have here a happy combination of a thoroughly satisfactory knowledge of the subject-matter of the sciences to be studied, and of the broad principles of education as such. Our author dedicates the book to "My Teachers," and we are glad to find that among these teachers are included one or two of the masters in the science of education. We are not surprised, therefore, to find science approached from the broad humanist standpoint, and we would direct the attention of Mr. Bateson to this work as a sort of corrective to his rather pessimistic views on the possibilities of science—though we fear that Mr. Bateson would remind us that Americans are not Englishmen, so his pessimism remains justified. This point has more than controversial importance, for we have to face the fact that the conditions on the two sides of the Atlantic are not identical, and that a considerable portion of

what Mr. Twiss writes is not quite applicable to the case of the English science master. This applies mainly to the discussion of textbooks and equipment, where the copious references must be invaluable to American teachers, but will prove less useful to us on this side. On the other hand, in all the bigger and broader aspects the work is of value to all readers.

The general plan is to give a wide view of the nature of education and of science, and of their interrelations, to lay down the broad principles of instruction, and then to illustrate by reference to the teaching of the various sciences that usually find a place in the school curriculum. While it is true that the treatment of the specific sciences illustrates the more general parts of our author's thesis, it does much more than that. The specialist in biology, in geography, in physics, or in chemistry may well turn to the parts dealing with his specialty, and will there find all that he needs. The ordinary form master, on the other hand, who wishes merely to get a general idea of how to deal with the ordinary scientific matters that persist in turning up during ordinary class work will find as much help as he needs, for Mr. Twiss writes primarily as a teacher.

The book is eminently sane on all the hotly disputed points. Formal Training and Transfer are treated in the broad and tolerant way that seeks for truth and not for dialectic victory. The spirit of Heurism is recognized throughout, though it is significant that there is no reference to this matter in the index. The Herbartian order of presentation gets all the attention it deserves, but our author is careful to warn us that "the 'formal steps' are never adhered to in a good lesson." Logical organization of the matter to be presented is insisted upon, but is accompanied by a warning of the dangers of over-emphasizing organization. The relation between inductive and deductive logic is admirably expounded, and all that is valuable in the canons of the former is clearly brought out and fully illustrated. On the more practical side Mr. Twiss admits the value of the give-and-take of class-teaching, though he prefers to call it "class conference" rather than "recitation." He has all the really successful teacher's abhorrence of too much of the teacher's voice, and tells us that "the frequency and logical significance of the questions asked by the pupils supplies one of the very best measures of the efficiency of a class conference."

Perhaps the central point of Mr. Twiss's work with regard to method is the use of the "problem" as the unit. This leads to the wider development of the Project method, which sets projects in the place of subjects. The project is really an elaborate problem that demands a long time to work out, and in the process of solving it the various sciences are laid under contribution, and the evils of the compartment system are avoided. Mr. Twiss is right in maintaining that this plan demands such exceptional powers in the teacher that no authorities have the right to expect it to be adopted as a general plan. English readers will be glad to note that our author is alive to the danger of overworking science teachers. School governors of all kinds should note his opinion: "In a school that pretends to maintain a high grade of instruction no science teacher should be responsible for teaching more than an average of four classes per day of not more than thirty pupils per class."

As is customary in American textbooks of this type, each chapter is followed not only by a bibliography, but by a series of questions and problems to be used either by the private student or set to the members of a class. The bibliographies are sometimes bewilderingly full, and sometimes it is not quite clear what is the exact point of connexion with the matter in the preceding chapter; but the intelligent reader will know how to select. The book is in every respect a fine piece of work.

*Ludus Literarius.* By John Brinsley. Edited by E. T. Campagnac. (10s. 6d. net. The University Press of Liverpool)

Prof. Campagnac continues his good work, and adds his admirable edition of Hoole's "Discovery" this equally admirable reproduction of Brinsley's "*Ludus Literarius*." These two books are referred to year in year out in the various University and other classrooms in the country where the history of education is taught, but hitherto the students have had to

take the lecturer's word for what they contained. For, though copies were to be seen at some of the few well equipped educational libraries, the ordinary student was securely cut off from all direct examination of these interesting texts. Thanks to the enthusiastic enterprise of Prof. Campagnac and his friends, the shame of lack of opportunity is being gradually removed. The work is lovingly done. The introduction comes quite up to the high standard the Professor has established for himself. It exemplifies his well known charm of style, and it is just the right length—long enough to be respectful to Brinsley, and short enough not to stand in the way of the text itself. The old schoolmaster is respectfully introduced, and then left to speak for himself. Beyond a very brief biographical sketch, nothing has been done in the way of annotation of the actual contribution Brinsley has made. His antiquated phraseology is quite intelligible without the help of an interpreter, and carries just that suggestion of old-worldness that is necessary to provide a suitable atmosphere. While the text is allowed to speak for itself, Prof. Campagnac has thought it expedient to supply a series of biographical notes that the reader will find of the utmost service. Though common sense, and the *flair* that comes from actual experience in the classroom, will enable any man of intelligence to put himself easily in the place of the old schoolmaster, only men of the reading and tastes of Prof. Campagnac could feel at home among the galaxy of authors to whom Brinsley refers. A modest claim is made that the bibliography is complete, and the few tests we have been able to apply certainly support the claim.

With regard to the "*Ludus*" itself, it is somewhat late in the day to start a review. Experienced teachers of the classics will find nothing particularly new in it, but they will also find very little to find fault with. The same may not be said about the newer school of teachers, though it is doubtful whether Dr. Rouse, for example, would have very much to say against the conception of the book as a whole. One could fancy him finding a good deal to praise from the point of view of the practical schoolmaster, however antiquated he might think some of the methods. The main value of the book is as an historical link in the long chain of development, and the students of education will be grateful to Prof. Campagnac—not, perhaps, for the somewhat undramatic conversations of Spoudeus and Philoponus, but for the opportunity of holding in their hands the actual text of a book that played an important part in its day. Of books about books there is no end. Let us lift our hat to every editor who follows in Prof. Campagnac's train, by introducing us to the books themselves.

*How to Enlighten our Children.* By Mary Scharlieb. (3s. 6d. net. Williams & Norgate.)

In these 202 pages Dr. Scharlieb has made as good a presentation as is ever likely to be made of a subject of first-rate importance and difficulty. In these days we are continually asking how much we should tell young people about sexual matters, and what is the best way of telling them. Dr. Scharlieb says that "the task of enlightenment, distasteful as it is, is rendered imperative," since science has now put into our hands such effective means of dealing with matters of this kind that it is unjustifiable to keep people ignorant of them. It is not young people alone who are ignorant. Parents are little better—and even doctors themselves, our author tells us, are greatly in need of enlightenment on recent developments in the hygiene of sex. The volume is described as "a book for parents." It assumes no technical knowledge of physiology, but merely common sense and an acquaintance with the common phenomena of life. Any technical terms that are introduced are explained as they occur, so that he who runs may read with intelligence. A great many questions that every parent—and not only young parents—wants to ask are here answered in the most straightforward and sympathetic way. The reviewer may as well confess that he took up the book with a considerable feeling of dislike. He has read so many books on sex-instruction, evidently written by people who revelled in the subject, that he was attracted by the style of a writer who appears to have been driven by sheer conscience to write in the interests of national wellbeing. "People," she tells us, "have chosen ignorance, and have mistaken ignorance for innocence." Head masters and other

witnesses before a Royal Commission maintained that with regard to matters of sex "in many cases the parents, with whom the ultimate responsibility rests, prefer that their children should remain ignorant." One fails to imagine the state of mind of the parent who retains this preference after reading what this book has to tell him or her. It is worth noting that the book deals as fully with the case of boys as of girls. Dr. Scharlieb does much by convincing the parents that they must do something; but she does still more by showing them exactly what to do, and how to do it.

*The Essentials of Descriptive Geometry.* By F. G. Higbee, M.E. (7s. 9d. net. New York: John Wiley & Sons. London: Chapman & Hall.)

Prof. Higbee's treatise is worthy to take high rank in the valuable series of American textbooks on mathematics produced during the past few years, and in particular it will secure a prominent position amongst those works which deal with this special branch of the science. In recording our appreciation of the volume, we may say that it is equally deserved whether we regard the writer as addressing in his own capacity of teacher the student whom he seeks to instruct, or whether we consider him as appealing to the general reader purely in the character of an expert in the subject he discusses. It will be well perhaps to listen to what the author himself has to say in his valuable preface as to the scope and aim of his work. With regard to the former, we are to look in the pages of the text only for what on the one hand possesses practical utility in the industrial sense of the word, and for what on the other tends to bring out the mental powers that help to produce the able draughtsman. And, since the main benefits which the prospective draughtsman may derive from a study of "Descriptive Geometry" are (1) the acquisition of a knowledge of projections, more especially of orthographic projections, (2) education in the art of solving problems dealing with points, lines, and planes, (3) a cultivation of the power to undertake successfully the analysis of problems in construction, it follows that the present treatise discusses primarily and in considerable detail the principles underlying orthographic projection and the various processes connected with this method of graphic representation. Further, numerous problems, all useful and very many of them of a practical nature, are examined fully and carefully. The author strives to make the reader realize the superiority of adopting special methods of work. To take but one example as an illustration, he treats exhaustively the subject of the effect of revolving planes so as to obtain coplanarity with the vertical plane, and establishes the value of considering objects as being in the third quadrant for purposes of commercial drawing. The diagrams with which the volume is profusely illustrated are excellent and delightfully reproduced, and render most valuable aid in the elucidation of the text.

*Experimental Physics.* By Harold A. Wilson, M.A., D.Sc., F.R.S. (10s. net. Cambridge University Press.)

The volume is designed as a manual to be employed in conjunction with courses of lectures on Experimental Physics, and Dr. Wilson's treatise, which is one of the Cambridge Physical Series, promises to be a most valuable student's textbook. The subjects which are discussed in its pages are Mechanics and Properties of Matter, Heat, Sound, and Light. From the wealth of material obviously at his disposal the author has very wisely selected only what he considers of fundamental interest and importance, believing that the needs of the student will be best served by a full explanation of such subjects as are discussed, even though the number of these may have to be diminished as a consequence. The treatment is both lucid and attractive, and a large number of clear and well executed diagrams will be found very helpful by the reader. Whilst no earlier knowledge of physics is required of the student taking up a study of the present volume—though it will be very evident that some preliminary school training in the science must possess a very real value to the student—the work reaches the standard of a first-year college course. The University Press is to be congratulated on the characteristic excellence both of the manner in which the book has been prepared for publication and of the style in which it has been brought out.

*Sound and Symbol.* By J. J. Findlay and W. H. Bruford. (1s. net. Manchester University Press.)

This pamphlet gives an account of some practical research work done at the University of Manchester. Prof. Findlay and a number of practical teachers set out to investigate the problem of the relation between sound and symbol in the learning of languages. The connexion with shorthand is here recognized in a way that promises much. The importance of the problem cannot be overestimated. What is greatly to be desired is the correlation of all the phonetic work necessarily involved in school. We must sooner or later unify the notation so that the phonetic methods of the infants' room, of the language room in the secondary school, and of the classroom of the commercial college where so-called phonography is taught, will all be carried on by means of a common system of signs. We cordially welcome this excellent beginning of a line of research that cannot fail to have most valuable results.

*Education: Scientific and Humane.* Edited by F. G. Kenyon. (6d. net. John Murray.)

This pamphlet gives an account of the proceedings of the Council for Humanistic Studies. This Council feels that the real enemy is "the great mass of ill-informed public opinion which distrusts or despises all education, or measures its value by its immediate money-earning capacity." All the same, it recognizes a certain danger of those interested in education dissipating their energy in fighting one another, so it has called into council the various "subject" associations—Classical, English, Geographical, Historical, Modern Language, Mathematical, Public School Science—and has obtained their opinion on various matters connected with curriculum and method. All the associations are catholic and broadminded on general questions of education, but when it comes to the distribution of time among the various subjects there is a very general desire to secure special attention to the particular subject the association represents. This is not only natural, but necessary, if a proper proportion is to be maintained. The pamphlet supplies a great deal of matter that should be useful to those who are to have the ultimate allocation of time to the different school subjects.

*The Iconoclast.* By Helen Hamilton. (1s. 3d. net. Daniel.)

The heroine, a gymnastic mistress in a reputable high school in the neighbourhood of London, is suddenly seized with an overwhelming desire to sow her wild oats, but, after a futile attempt lasting for a few weeks, she goes back patiently to harness again. There is no help for it; after a vain struggle to be free she must go back to "the withered vestalhood that kept no fire burning, but rather threw the ashes of a cold conventional negation of life upon the dull embers of an effete system of education." These words are quoted from a modern paper called *The Iconoclast*, which gives the title to the book. "The Iconoclast" advocates the economic independence of woman, but does not approve of celibacy, holding that the life of a celibate is incomplete. It is the reception of a chance copy of this paper that disturbs the even tenor of Dicky's ways and makes her no longer satisfied with the sentimental devotion of Pretty who shares her flat. She goes to the head mistress and demands a "term off," to which after seven years' work she has a claim. The interview between the two is an admirable bit of description and character-drawing. The head mistress trots out the conventional cant about devotion to duty, and for a time relations are strained. To anyone who is yet unconvinced of the dangers to which a community of women are liable, from sentimental friendships and narrow conventions, this tract will prove enlightening. It is also a readable story.

#### OVERSEAS.

A recent bulletin from the American Bureau of Education has caused a considerable amount of talk. It is written by Prof. A. Caswell Ellis, and has the attractive title of "The Money Value of Education." The Professor boldly takes the low stand of money value, and proceeds to demonstrate that even on this humble level education pays. His logic is not always of the closest, but his demonstrations are admirably arranged to catch the eye and the imagination. His pamphlet

is full of diagrams, and of what look like street posters on a reduced scale. The posters ask interesting questions, and supply bold and encouraging answers: "Does Education Pay?" asks one of them bluntly, and replies by quoting the salaries paid in the New York Bridge Department; in positions demanding only the three R's, 982 dols.; in those demanding high school and commercial courses, 1,729 dols.; in those demanding high school and two or three years of college or technical education, 2,400 dols. The poster then proceeds to ask, "Which position are you preparing yourself to fill?" and adds convincingly, in large capitals: "It pays to continue your education." Another poster begins with the striking statement, "Every day spent in school pays the child nine dollars," and proceeds to prove it. Mr. Fisher will be glad to read that "Schools are a paying investment for the State," and that "Education is not a charity, but the best paying investment." We have no doubt that this pamphlet would appeal strongly to many who are doubtful about following Mr. Fisher's lead, but somehow we are glad that it appeared in America rather than in England.

We are getting familiar with authoritative advice about how to cross streets, and generally how to save our lives in the midst of congested traffic; so it is interesting to compare ours with the American exhortations that follow:—(i) Don't cross in the middle of the block. (ii) Don't forget the old and the young; they suffer the most. (iii) Don't hurry in front of moving traffic; wait till it stops. (iv) Don't rely on the other fellow's judgment; leave a margin of safety." We wonder whether the appeal for the old and young reflects more credit on us or on the Americans. Are they more considerate on the other side of the Atlantic, or do we not need the hint on this side? In any case, it is interesting that American educational journals recommend that instruction about conduct in city streets should be given in every city school in the States.

The American *Educational Review* is doing a bit of useful resurrection work by republishing "old articles that can still do good." The idea is an excellent one, and many of the disinterred articles may prove profitable for present-day readers. Besides, there is something peculiarly soothing to the writer of fleeting contributions in the thought that he may have a sort of limited immortality thrust upon him by having his work given a second chance in such a responsible review. But the least the editor can do is to quote his author. Sir James Crichton-Browne will no doubt be surprised to find that his name does not appear as the author of the resurrected article on "The Artificial Production of Stupidity in Schools." He appears to have himself to blame, however, since the editor of the *Review* explains that the name of the writer was not given when the article appeared in 1872. In any case the authorship is by no means unknown on this side of the Atlantic. Few articles on education have produced so much discussion as this of Sir James's. It interests us to note that our American friends regard his strictures as still valid.

Far-seeing English teachers will keep a careful eye on everything that appears in the American papers about the Gary system, for in it are to be found the seeds of changes of the most serious kind. The lengthening of the school day, the possibility of a continuous session throughout the whole school year, the use of the school buildings for all manner of social purposes—these and many more revolutionary developments are implicit in Mr. Wirt's reforms. We must watch carefully, therefore, the action that Tammany may take with regard to the introduction of the system into New York. It appears that the attack on Mr. Wirt's plans has up till now been mainly a political ruse having no educational principle behind it; and it is just possible that the new Mayor, Mr. Hylan, will withdraw his opposition now that his end has been served. It has become clear that the school urchins who made a sort of strike against the system were not themselves concerned with the matter, and had no knowledge or experience of the scheme at all. On the other hand, the principals and teachers who were actually conducting the work on the Gary plan have almost unanimously approved of it, and are convinced that it is entirely a good thing to bring the pupils into living contact with educational values through sharing in social activities on such a scale as is possible to their years. It is to be hoped that Mr. Hylan will give the new scheme a fair chance.

The fight between the teachers of English and the teachers of all the other subjects goes merrily on in America. The

point is that the English teachers maintain that it is everybody's business to correct mistakes in English wherever found. The other teachers say to the English teacher, "That is your business: see thou to that." Mr. Frederick S. Camp begins, in the *School Review* (Chicago), a campaign that the editor hopes will be taken up and carried on. Mr. Camp holds the view that the teacher of English must take the initiative and keep it throughout: "In a word, our English department goes into the other departments to get its correct point of view in teaching the English of those departments; your plan is for the other departments—wasps, ants, and bugs (every high-school boy thinks there is at least one in every faculty)—to go into the English work and only half do the job. Our sympathies are all with Mr. Camp. But what is specially needed is the help of the other teachers in carrying out the plans initiated in the English department.

Our American allies are already feeling the pinch of war in the form of lack of labour, especially for agriculture. It is estimated that there are over two million lads in the United States between sixteen and twenty, and to these the Republic looks for effective assistance in meeting the shortage of labour in the fields. A society has been organized to make the necessary arrangements. Last year much was done in preparing the way, and this year there is high hope that a really excellent scheme will be worked out. Nor is the financial side being neglected among the young. In America a "bit" is the name given to a coin that does not exist. It represents in value  $1\frac{1}{4}$  cents, so that two "bits" equal one quarter of a dollar. At Phoenix, in Arizona, there has been instituted a "Two-bits-a-day Club," the members of which are to buy a quarter's worth of thrift stamps every day. The American *School Review* supports the scheme. "Let an enterprising principal, whose pupils are not already in very large numbers buying thrift stamps, urge the formation of a two-bits-a-week club. Instead of doing one's bit, each pupil may be urged to do two bits. The excellence of the cause will excuse the atrocity of the pun."

## GENERAL NOTICES.

### ENGLISH.

*Word Book of the English Tongue.* By C. L. D.  
(1s. 6d. Routledge.)

The compiler's aim is to give true English words in place of the foreign ones so often used needlessly. A few thousand stock loan-words are chosen and against each are set "good English words" that may stand in their stead. Thus, under "Commence," we find "arise, begin, dawn, set in, fall to work, open (fire)," and several other words that may take the place of this overused and rather ugly term.

"School English Classics."—*Lamb: Tales from Shakespeare* (First Series). Edited by A. R. Weekes. (1s. 4d. Clive.)

Contains "The Tempest," "As You Like It," "The Merchant of Venice," "King Lear," "Twelfth Night," and "Hamlet." The introduction and notes are kept within due bounds and aim only at supplying the information that is quite necessary.

### HISTORY.

*Tales of the Scots.* Retold by Jessie Patrick Findlay; and illustrated by Margaret Ross. (Boards, 1s. net; paper, 8d. net. Stirling: Mackay.)

Six stories of Scottish kings who reigned in the middle ages, taken chiefly from the Latin Chronicle of Hector Boece. Contains "a most vivid picture of the passionate childhood of Scottish history" and in its consequent simplicity will appeal to young or listeners.

*Tort, Crime, and Police in Medieval Britain.* A Review of some Early Law and Custom. By J. W. Jeudwine. (6s. net. Williams & Norgate.)

In spite of its somewhat heavy title, this book will prove readable, and sometimes humorous, to the general public, though it is perhaps addressed especially to historians who are apt to take a mistaken view of historical events owing to their ignorance of just those matters that are here treated—an ignorance that is excusable because the laws and customs quoted are not readily available even to hard-working investigators. Mr. Jeudwine says: "There has been an absurdly distorted view of early medieval

society given from the habit of the historian of representing the English king as an intolerable tyrant from whose iniquities some patriot delivered a devoted people."

*An Analytical Outline of English History.* By W. E. Haigh. (3s. 6d. net. Oxford University Press.)

This volume covers the whole of English history up to the death of Edward VII. The facts are arranged in chronological order under reigns, but the book aims at being more than a mere summary. It brings out the evolutionary character of English history. It is especially intended for students preparing for University matriculation or examinations or similar standard.

*A Handbook of Modern European History, 1789-1917.* Compiled by S. E. Maltby. (1s. 6d. net.; interleaved, 2s. net. Headley.)

This book is for the student in tutorial classes and for the newspaper reader—i.e. for all of us. It gives in a convenient form, arranged as a chronological summary, just those facts of European history for the last hundred years that we are constantly wanting to know as we read the papers, and which we have neither time nor opportunity to find out in larger works of reference. A useful glossary explains such political terms as Duma and Syndicalism.

*The Later Middle Ages. A History of Western Europe, 1254-1494.* By R. B. Mowat. (4s. 6d. Clarendon Press.)

This is a volume in the series of "Oxford Textbooks of European History." It follows the first volume, *Medieval Europe, 1095-1254*. There are five maps and a full index.

*A Short History of the English People.* By J. R. Green. With Tables and Analysis by Arthur Hassall. Part V: Epilogue. By Alice Stopford Green. (2s. 6d. Macmillan.)

This volume completes the reissue in parts of Prof. Green's widely read and widely enjoyed history. It has been continued up to 1914 by Mrs. Green. A full index and an analysis make the book more useful.

*Notes on European History.* For Army Candidates.

By D. L. Lipson. (1s. net. Blackie.)

These are notes in chronological order of the chief events of the nine subjects of European history which Army candidates are required to study.

*A History of Europe (New Edition). Part III: Modern Europe.* By A. J. Grant. (4s. 6d. net. Longmans.)

The new edition has given the author the opportunity of increasing the value by the addition of six chapters dealing with English affairs. An index has also been added.

"The Nations' Histories."—(1) *Spain.* By David Hannay. (2) *Hungary.* By Arthur B. Yolland. (Each 3s. 6d. net. Jack.)

These volumes are well provided with illustrations and maps. They are written in an interesting style and include, in the form of an appendix, the latest information regarding the internal condition of the country.

#### MATHEMATICS.

*Differential Equations.* Being Part II of Vol. II of a Course in Mathematical Analysis. By Edouard Goursat. Translated by Earle Raymond Hedrick and Otto Dunkel. (11s. 6d. net. Ginn.)

The present volume consists of the second half of the second volume of the French edition of Goursat's "Cours d'Analyse Mathématique." The translators thought it to be in the interests of students in American schools to issue the two parts separately, and this has been done with Prof. Goursat's approval. The book is suitable for courses of analytical mathematics in American Universities.

#### BOOK-KEEPING.

*The Students' Catechism on Book-Keeping, Accounting, and Banking (Second Edition).* By Frederick Davey. (3s. 6d. net. Butterworth.)

The aim of this book is to give a complete explanation of all forms of book-keeping with sufficient examples for actual practice to ensure that the student shall have grasped fully the principles enumerated.

#### SCIENCE.

*The Theory and Use of Indicators.* An Account of the Chemical Equilibria of Acids, Alkalies, and Indicators in Aqueous Solution, with Applications. By E. B. R. Prideaux. (12s. 6d. net. Constable.)

This book is addressed to the technical chemist who appreciates the value of working hypotheses. It gives the student a

connected survey of the recent controversies that have arisen over the use of acids and alkalies as indicators.

*What Industry owes to Chemical Science.* By Richard B. Pilcher and Frank Butler-Jones. With Introduction by Sir George Beilby. (3s. net. Constable.)

This useful book serves a twofold purpose. It demonstrates by straightforward, unvarnished facts the aids that the science of chemistry has given to material progress, and it indicates that the student of chemistry will have no difficulty in finding work in the industrial world. In recent years chemistry as a school subject has somewhat declined in prestige because an uninteresting section of it was taught in a mechanical manner. It was begun too early under a specialized form that did not appeal to the boy. But chemistry taken at the right time not only becomes a subject of absorbing interest, but also—and this point is not without its importance—it leads to sound appointments. Many readers will learn with interest from this book how chemists have helped in the development of the manufacture of minerals, dyes, oils, leather, rubber, tobacco, explosives, and a host of other materials.

#### DOMESTIC ECONOMY.

*Domestic Economy. Part I: Theory.* By Marion Greenwood Bidder. *Part II: Practice and Teaching.* By Florence Baddeley. (Each 2s. 6d. net. Cambridge University Press.)

These two textbooks for teachers and students of domestic economy carry out the modern claim that cookery, laundry-work, housewifery, and other domestic arts should be firmly placed on a scientific basis. In the past it has undoubtedly been a matter of possible reproach against some teachers that they have taught these arts empirically, without possessing that knowledge of science necessary to justify their work. Part I deals with bacteria, ventilation, water, foodstuffs, and clothing. Part II gives the practice based on Part I. If mothers would read these two fascinating volumes, they would better understand what the schools are trying to do.

#### FOOD ECONOMY.

*One Hundred Points in Food Economy.* By J. Grant Ramsay. Preface by W. D. Halliburton. (1s. net. Bell.)

There is a very considerable amount of sound sense and useful information contained in the hundred points arranged somewhat like a catechism. A table of contents enables the reader to find the points he wants.

#### DISPENSING.

*How to Become a Dispenser.* The New Profession for Women. By Emily L. B. Forster. (2s. 6d. net. Fisher Unwin.)

Miss Forster has written a detailed handbook of practical utility to girls and young women who intend to become dispensers or chemists. Information as to examinations and how to prepare for them is given. There is a list of public institutions employing women dispensers. A chapter tells how to start a chemist's shop. Dispensing offers a promising field for women, as Miss Forster is able to assure her readers that there are more openings in the dispensing world than there are applicants.

#### MEDICINE.

*Herbs used in Medicine.* First Series. With Notes by Mrs. John D. Ellis; and sixteen coloured plates by Miss Ethel M. Barlow. (3s. National Herb-growing Association.)

The National Herb-growing Association is trying to supply the deficiency in medicinal plants resulting from the War. Mrs. Ellis writes a description of sixteen useful plants about which ignorance or confusion prevails. The plates are excellent, and will enable the collector to recognize the plants readily.

#### WRESTLING.

*Wrestling.* By Percy Longhurst. With twelve illustrations. (1s. net. Methuen.)

Mr. Longhurst is an enthusiastic advocate for wrestling, which he considers the most satisfactory of all athletic exercises, because it develops the whole body without undue strain on any part. He describes in detail the various styles of wrestling, and gives hints for training.

#### CLASS SINGING.

*Class Singing and Ear Training in Schools.* With Syllabus of Instruction in Musical Theory and Notation. (2d. King.)

This is the syllabus issued by the Education Officer of the London County Council. It contains also an appendix on breathing exercises

(Continued on page 78).

1918.

## THE COLLEGE OF PRECEPTORS

INCORPORATED BY ROYAL CHARTER  
BLOOMSBURY SQUARE, LONDON, W.C.1.LECTURES FOR TEACHERS  
ON THE  
SCIENCE, ART, AND HISTORY OF EDUCATIONCOURSE OF TWELVE LECTURES ON  
PSYCHOLOGY FOR TEACHERS.To be delivered at The College of Preceptors, Bloomsbury Square, London, W.C.1, on Thursday evenings,  
7 February to 7 March, and 2 May to 13 June, 1918By JOHN ADAMS, M.A., B.Sc., LL.D., F.C.P.,  
Professor of Education in the University of London.

The Course of Lectures (the First Course of the Forty-fifth Annual Series) began on Thursday, February 7th, at 6 p.m.

As usual, the course will be such as to prepare students for the examinations of the College in connexion with the Associateship, the Licentiatehip, and the Fellowship, but the lectures will have a distinctly practical character, and the facts of Psychology will be so presented as to enable the teacher to apply them to the ordinary needs of the school. The work will be so arranged as to give the students an opportunity of comparing the results of their own experience with the latest results of psychological research into educational problems. The reading of the students will be guided, and problems set for their exercise. The lectures will be copiously illustrated by examples drawn from the actual experience of teachers in all kinds of schools.

## SYLLABUS.

I. (Feb. 7.) *The Relation of Psychology to Education.*—Nature and scope of Psychology and of Education: the psychological attitude: unreasonable demands made on Psychology: subject-matter of Psychology: consciousness: the ego and non-ego: the subjective and the objective: the science of behaviour: the various departments of Psychology, and their relative importance to the educator: the "faculty" fallacy: knowing, feeling, and willing: soul, mind, and psyche: the subconscious and the unconscious with their educational applications.

II. (Feb. 14.) *Sensation and Perception.*—The five gateways of knowledge: general and special senses: distinction between sensation and perception: the implications of *meaning*: manipulation of the raw material of sensation: pure sensation: Weber's law and its applications to education: the so-called "training of the senses": relation between perception and apperception: the meaning of knowledge: the relation between knowledge and instruction.

III. (Feb. 21.) *Ideas and their Manipulation.*—Old-fashioned views on abstraction and generalization: current view of conception: the static and the dynamic aspects of ideas: mental content and presentative activity: classification of ideas according to their mode of reacting upon each other: fusion, complication, and arrest: the dynamic threshold: mediate and immediate recall: organization of ideas: the hierarchy of ideas: possibility of diminishing presentative activity.

IV. (Feb. 28.) *Attention.*—Mental focus: marginal and submarginal regions: the mechanism of attention: vascular, respiratory, and motor elements: rhythm of attention: the concentration and diffusion beats: classification of the aspects of attention: resolution into the two fundamental aspects, *active* and *passive*: passage from the one to the other: motive power is *interest*: nature and manipulation of interest: distraction, the conflict of interests.

V. (March 7.) *Retention and Recall.*—The conservative element in physical and psychic life: natural or brute memory: dated and undated memory: possibility of improving the natural memory: coefficient of memory: reverie and recollection: the purposive element in recall: process of reconstruction: *intensive versus* diffused impressions: instalment system of memorizing: use and abuse of mnemonics: learning by rote: meaning of cram: obliviscence, natural and deliberate.

VI. (May 2.) *Imagination.*—Distinction between production and reproduction of mental complexes: imagination an inverted memory: different technical meanings attached to word *imagination*: unreasonably narrow meaning current in schoolwork: the creative element in imagination: essentially derivative character: the scientific *versus* the aesthetic imagination: necessary limitations of the imagination: the dangers of pictorial thinking.

VII. (May 9.) *Association.*—Rather a *post-facto* explanation of mental states: somewhat discredited at present: the laws of association, primary and secondary: convergent and divergent forms, and their treatment: manipulation of associations by means of suggestion: justification of the use of suggestion in education: possibility of auto-suggestion: pseudo-auto-suggestion: contrariant types of pupils: effect of age on power of suggestion acting on associations.

VIII. (May 16.) *Temperament.*—Physical basis of what is called *disposition*: old-fashioned classification by humours: physiologically indefensible, but has led to collection of much valuable psychological material: classification by nervous reaction: sensories and motors: introverts and extroverts: permanency of temperaments: possibility of modifying temperament by education: relation between temperament and character: individuality and personality: types and their manipulation.

IX. (May 23.) *Instinct and Habit.*—Conflicting views about the nature of instinct: the place of instinct in education: manipulation of instincts: relation of instinct to habit: the place of consciousness in the process of habit formation: the upper and the lower brain: co-ordination: accommodation: the growing point in character-forming: the dangers and the advantages of habit-forming: "to form habits is to fail": the best way to break habits.

X. (May 30.) *Intuition and Intellect.*—Bergson's view of the two directions of the spiritual force: contrast of the wasp at one end and Kant at the other: the underlying justifications of intuition: the limitations of intellect: usual meanings of *judgment*, *understanding*, *reasoning*: inevitability of conclusions from given data: practical definition of thinking: the implication of the element of purpose: *noesis* and the educational value of the view it represents.

XI. (June 6.) *Feeling and Emotion.*—Technical meaning of *affection*: discrimination of emotion from passion and sentiment: emotion and its control: mechanism of the emotions: the Lange-James and other theories: possibility of dissociating an emotion from a given complex: relation between the emotions and the instincts: the bearing of this distinction on education: the function of the emotions in spiritual life: the doctrine of elimination: the training of the emotions.

XII. (June 13.) *Conation.*—Will the active element in psychic life: relation to desire and expectation of realization of desire: the will as a resultant: popular fallacy of the will as a separate entity: insufficiency of the "choice between alternatives": nature of motives, and their relation to the will: the usual hypostatization: indecision: *aboulia*: caprice *versus* freedom: the training of the will: subjective limitations: fallacy of "breaking the will."

## FEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

\* \* Members of the College have free admission to the Course.

## RELIGION.

*Haggai and Zechariah.* With Notes and Introduction. By W. Emery Barnes. (2s. 6d. net. Cambridge University Press.)

The title-page has been copied as above, but this new volume of the Cambridge Bible for Schools and Colleges, which Prof. Barnes has edited, also includes the book of Malachi. The introduction consists of nine sections, and includes the history of Persia at the time. Then follow the three books, each with their notes and index.

*Vision and Service.* Being Sermons, Papers, Letters, and Aphorisms. By the late Canon Barnett. Selected, edited, and introduced by his wife, Henrietta O. Barnett. (1s. net. Hampstead: Mrs. Barnett.)

Many friends and admirers of Canon Barnett and his work will be glad to possess this little book and to hear again in imagination the voice they have so often listened to with affectionate respect. Under existing war conditions no publisher could be found who would issue the book at 1s.; consequently Mrs. Barnett has made herself responsible, and copies can, we presume, be obtained from her.

*The Economic Antichrist.* A Study in Social Polity.

By W. Blissard. (6s. net. Allen & Unwin.)

The theme of the Rector of Bishopsbourne is to inquire how far and in what way modern social conditions affect Christianity he suggests that "economics," the phrase used nowadays to cover all material conditions of life, is the power of darkness that should be the natural object of Christian militancy. Economic law deals with material things, religion with spiritual. It is a question whether modern Christianity has not entered into an opportunist complicity with its antagonist.

"Kingsway Series."—*The Teacher's Book of Bible Lessons.* By Clara E. Grant. Illustrated by Simple Verses, Hymns, Poems, and Nature Talks. (1s. 6d. net. Evans.)

This book gives schemes of lessons for County Council infant schools and also a two years' course for children of five to six years of age. The tone of the teaching is sincerely religious, but avoids controversial matter and keeps to the Cowper-Temple agreement.

"Murby's Larger Scripture Manuals."—*St. Luke.* With Introduction, Maps, Explanatory Notes, and Critical Appendixes especially intended for the use of Schools and Theological Students. By Charles Knapp. (3s. net. Murby.)

Dr. Knapp's manuals are well known for their thorough and scholarly treatment. *St. Luke* follows the lines of earlier volumes. Very full foot-notes accompany each page of text, and the most recent archaeological discoveries are incorporated.

*The Survival of Jesus.* A Priest's Study in Divine Telepathy. By John Huntly Skrine. (5s. net. Constable.)

John Desmond, a Canon of the Established Church, is represented as pondering over the question whether he is in reality a Unitarian. The book shows the workings of John's mind through the whole of Christian theology. It should help many earnest inquirers at the present time.

*The Fourth Gospel: Its Significance and Environment.* By Robert Harvey Strachan. (3s. 6d. net. Student Christian Movement.)

Mr. Strachan regards the Fourth Gospel as an *Apologia* for the Christian faith, an answer given at the end of the first century to the question recurring in each age: "Whom say ye that I am?" He re-forms for the reader the *milieu* in which the Gospel was produced. It will be found a book of absorbing interest to students of the Gospels.

"According to *St. Luke.*" Studies in the Person and Teaching of Jesus Christ. By Hugh Martin. (1s. net. Student Christian Movement.)

In the preface the author says that the text is more important than the commentary, and modestly advises the reader to discard the book if it fails to help him to a clearer understanding of the Gospel. But no student can fail to find help in this book. It is arranged for the use of Study Circles, brief studies for each week covering a period of fifteen weeks.

*St. Paul to the Romans.* Studies in the Epistle to the Romans. By the Rev. R. L. Pelly. With a Translation into Modern English by Prof. James Moffatt. (1s. 3d. net. Student Christian Movement.)

The book is directed to Study Circles and covers an eight-week course. A portion of the retranslated text is given in each

Study, and is followed by a running commentary. The commentary is printed in larger type than the text; the latter, however, is clear and readable.

*Christian Experience and Psychological Processes.* With Special Reference to the Phenomenon of Autosuggestion. By Ruth Rouse and H. Crichton Miller. (2s. 6d. net. Student Christian Movement.)

This subject is one of considerable importance at the present time, when much pseudo-psychology and quack information is being issued and discussed in reference to autosuggestion. A book authorized by and taking the point of view of the Student Christian Movement will be sure of many readers. Mr. Crichton Miller is a Doctor of Medicine.

*Looking Forward* (Eighth Edition). By Francis Channing Miles Welles. (1s. net. Simpkin, Marshall.)

The number of editions already called for indicate that the author has been successful in calling attention to the duties involved in parentage and to the evils that have in the past resulted when men of unsound lives have become parents.

*Holy Communion and Reservation.* Four Articles by Bertram Pollock, Bishop of Norwich. (1s. 6d. net. Murray.)

The Bishop of Norwich here reprints in volume form four articles that he wrote for the *Church Family Newspaper* in order to give the layman suitable grounds for forming a judgment on this much-debated matter.

*Women in the Apostolic Church: A Critical Study of the Evidence in the New Testament for the Prominence of Women in Early Christianity.* By T. B. Allworthy. (3s. net. Heffer.)

At such a moment as this, Mr. Allworthy's book is sure to be widely read. According to Jewish teachers before the time of Jesus, the duty of a woman was to marry early, bear children, attend to the home, and set her husband free to devote himself to religious study and practice, which it was hoped would avail for his wife also. Jesus recognized no distinction in spiritual things between the sexes. These two quotations give the key to a very readable book.

*Comparative Religion.* By A. S. Geden. (2s. net. Christian Knowledge Society.)

This book claims only to be a small handbook to a most serious subject. It deals with early forms of faith, and then with Hinduism, Buddhism, Judaism, Mohammedanism, and Christianity. There is a bibliography for the guidance of those who wish to carry the subject further.

*No Bishop, No Church; or, Anglo-Catholic Claims Examined.* Three Historical Essays by the Rev. J. R. Cohn. (6d. The Church Book Room.)

Mr. Cohn's booklet is a part answer to Dr. Gore's "The Religion of the Church." It bears on the Christian ministry of the Early Church and Apostolic succession in the light of the best modern English thought.

## NOT CLASSIFIED.

*The Cinema: Its Present Position and Future Possibilities.*

Being the report of and chief evidence taken by the Cinema Commission of Inquiry instituted by the National Council of Public Morals. (10s. 6d. net. Williams & Norgate.)

Whatever the influence of the cinema may be, it has come to stay, according to the hackneyed phrase. In the long run it is public opinion that will control the films; but an inquiry such as this helps public opinion to express itself. A part of the volume that will prove of especial interest to teachers is that dealing with the use of the cinema in schools.

*The Book of School Games.* Edited by C. E. Hodges. (3s. 6d. net. Evans.)

There can be no question as to the value of games played in school. After a short spell at games the children return invigorated to their work. But to get the full value the games must be carefully organized, while their instructional character is not obtruded on the notice of the children. Teachers will get many helpful ideas from the dozens of games given here, both outdoor and indoor.

*The Teacher's Book of Music for Infants: Note-singing. Dramatized Nursery Rhymes and Games.* By Clara E. Grant. (1s. 6d. net. Evans.)

Another volume in the successful "Kingsway Series" for teachers in the Primary departments of schools. There are between thirty and forty rhymes and action-games set to music.

(Continued on page 80.)

**A. & C. BLACK, LTD.,**  
4, 5, & 6 Soho Square, London, W. 1.

*Persephone.* A Play by Katherine Merryman.  
(6d. net; with music, 2s. 6d. Harrap.)

An additional volume in Harrap's series of plays for acting in schools. There are six principal characters and the number of attendant maids and nymphs can be varied as occasion requires. The play is short, and quite within the power of elder girls to act.

*The King's Fishing: Done into Verse.* By Charles Mercier.  
With Notes, critical and explanatory. (1s. 3d. net. Mental Culture Enterprise.)

This is a collection of parodies and satires on the critical and expository notes of editors of the classics. There is, indeed, ground enough for Dr. Mercier's satire.

*The Principles of Industrial Administration.* By George Edson Toogood. Introduction by W. L. Hichens. (1s. net. Brown & Sons.)

Mr. Hichens, chairman of a big industrial concern, and a man who has shown himself alive to the difficulties of the day, commends this book to those who desire to understand the basis of industrial administration. Such a motto as "business is business," meaning that business is self-interest, must give way to the view that industries are a national service.

*Human Immortality: Two Supposed Objections to the Doctrine.*  
By William James. (7d. net. Constable.)

This address formed the Ingersoll Lecture at Harvard University in 1898, and has already run through several editions. The present one is low-priced and handy for the pocket.

*The Prisoners' Friends: John Howard, Elizabeth Fry, and Sarah Martin.* By Constance Wakeford. Illustrated by George Soper. (2s. 6d. net. Headley.)

A well-written and interesting biographical account of these three well-known philanthropists, with telling illustrations.

*Women's Work in War Time.* A Handbook of Employments. Compiled and edited by H. M. Osborne. Preface by Lord Northcliffe. (2s. net. Werner Laurie.)

Mrs. Osborne has collected the information given in this book by systematic investigation and personal interviews with heads of departments. Full details will be found of every occupation that the war conditions have brought about.

*How Joy was Found.* A Fantasy in Five Acts.  
By Isobel W. Hutchison. (3s. 6d. net. Blackie.)

Miss Hutchison has founded her story upon an old Highland tale, "How Finn kept his Children for the Big Young Hero," and from it reproduced in a very charming setting a study of the psychology of faith.

*Killing for Sport.* By Various Writers. Preface by G. Bernard Shaw. (1s. net. Humanitarian League.)

A new and cheaper edition of this book that was noticed when it first appeared. The war has done much for the object with which the book was written. The Eton College Beagles have now disappeared, though they weathered the attacks of the League for many years.

*The Munition Workers' Handbook.* By Ernest Pull.  
(2s. 6d. net. Crosby Lockwood.)

The volume, handy for the pocket, gives practical information on workshop arithmetic, mensuration, screw-cutting, shell-turning, and many other matters that the worker needs to know.

*War Speeches, 1914-1917.* Collected by Benedict W. Ginsburg.  
(2s. 6d. net. Clarendon Press.)

Many students of modern political conditions will be glad to have in accessible form important speeches by Lloyd George, President Wilson, Von Bethmann-Hollweg, and other persons of high political and diplomatic position.

*I Appeal unto Caesar.* The Case of the Conscientious Objector.  
By Mrs. Henry Hobhouse. Introduction by Gilbert Murray.  
(1s. net. Allen & Unwin.)

A book that should be in every newspaper office to strengthen the editor to take an unbiased view of a position that causes great anxiety to men and women who care for the fair fame of England. The persecution of those who differ from us in opinion has never proved to be a wise proceeding.

*The Cultivation of Allotments.* By Percy Elford and Samuel Heaton. (8d. net. Clarendon Press.)

This book is a practical guide for those who are trying, with slight knowledge, to grow vegetables. It represents the experience and practice of the horticultural section of the Oxfordshire Education Committee.

(Continued on page 82.)

## THOMAS NELSON AND SONS, LTD.

### SUPPLEMENTARY READERS.

— Suited for all Grades. — Recent Additions. —

#### FAIRY TALE (Junior).

**CAPTAIN BLUECOAT'S TALES FROM JAPAN.** By T. A. SPALDING. 9d.

Four quaint Japanese stories, connected by a lively account of the doings of three British children and their guide, philosopher, and friend, Captain Bluecoat.

**THE ENCHANTED DOLL.** By MARK LEMON. 9d.

A well-known and delightful fairy tale, simplified for the reading of young children.

**RIP VAN WINKLE.** By WASHINGTON IRVING. 9d.

This ever-green story has been carefully simplified for the juniors.

**OLD PETER'S RUSSIAN TALES.** Three Series. By ARTHUR RANSOME. 9d. each.

A wonderful collection of folk stories, so linked together that a simple and humorous picture of Russian peasant life is presented.

**THE STORY OF SINBAD THE SAILOR.** Retold by T. A. SPALDING. 9d.

All the objectionable or unsuitable portions of this fascinating narrative have been omitted or remodelled.

#### FICTION (Junior).

**MOUFFLOU.** By "OUIDA." 9d.

The most beautiful dog story ever told. It has been slightly simplified for the reading of juniors.

#### FICTION (Senior).

**THE ADVENTURES OF THE FAMOUS CAPTAIN SINGLETON IN AFRICA.** DANIEL DEFOE. 1s. 6d.

Defoe's Captain Singleton has all the spirit and realism of Robinson Crusoe. The first part has been abridged and simplified in this volume.

All the above books are illustrated by pictures carefully chosen from the point of view of the readers for whom they are designed.

Write for the Continuous Reader Catalogue (new edition) edited by Thos. A. Spalding, LL.B.

#### GEOGRAPHY: TRAVEL (Senior).

**BY DESERT WAYS TO BAGHDAD.** By Mrs. ROWLAND WILKINS. 1s. 6d.

The story of a journey from Brousa to Baghdad, full of humorous incidents. Describes the scene of our Mesopotamian campaign.

**WHAT I SAW IN FINLAND.** By Mrs. ALEC TWEEDIE. 1s. 6d.

A vivid description of the inhabitants, customs, and resources of this remarkable and deeply interesting country.

#### HISTORY (Senior).

**THE ADVENTURES OF EDMUND LUDLOW.** By T. A. SPALDING. 1s. 6d.

A dramatic story of personal adventure during the Civil War, the Commonwealth, and Restoration periods, extracted from Ludlow's "Memoirs."

NOTES AND ILLUSTRATIONS to this work have been prepared for the use of teachers. 2s. 6d.

**ROMANCE OF THE SPANISH ARMADA.** By J. R. HALE. 1s. 6d.

A real romance of absorbing interest, the work of the greatest living authority on the subject.

**WHY BRITAIN WENT TO WAR.** By Sir EDWARD PARROTT, LL.D., M.P. 1s. 6d.

A brilliant sketch of the historical causes that led to the great European War, told in simple language. This work has been approved by many educational authorities.

#### INDUSTRIES (Senior).

**SHIPS AND SEAFARING.** By A. O. COOKE. 2s. 6d. net.

The first volume of a new section, designed to deal with our main British industries in an attractive fashion.

#### NATURE STUDY (Senior).

**A HOLIDAY BY THE SEA.** By EDWARD STEP. 1s. 6d.

The story of the flora and fauna of the seashore by a well-known naturalist who writes from direct observation.

## A Selection from METHUEN'S EDUCATIONAL LIST

Announcement List and Catalogues sent on application.

**HOME AND STATE: An Introduction to the Study of Economics and Civics.**

By SUSAN CUNNINGTON. Crown 8vo. 3s.

## HARRAP'S LATEST PUBLICATIONS ENGLISH EXTRACTS AND EXERCISES.

For Comparative Study and Training in Composition.

By F. H. PRITCHARD,

Lecturer in Literature at the Municipal Technical School, Devonport.

Large crown 8vo, 256 pages, 2s. net.

(Prospectus on application.)

An admirable practice-book in English for lower and middle forms in secondary schools and for upper classes in primary schools. The main idea is to centre all the week's work in English round a suitable extract. The exercises are abundant, and in many cases novel in character. No essential point in elementary English is left untouched, and, wherever possible, opportunity is taken to stimulate interest in the author or extract under consideration.

*Schoolmaster.*—"The whole book bears evidence of thought and painstaking, and we are pleased to bestow our benison upon it."

## HARRAP'S INTRODUCTORY ALGEBRA.

By WILLIAM FARQUHARSON, M.A.,

Daniel Stewart's College, Edinburgh.

Crown 8vo, 144 pp., 1s. 6d. net. Also with Answers, 2s. net.

*Aberdeen Free Press.*—"We think the author has succeeded in presenting the facts in a natural and easy sequence. A deal of originality, typing, and scope of problems is shown in his divisions."

JUST READY.

## AN INTRODUCTION TO THE HISTORY OF SCIENCE.

By Dr. WALTER LIBBY, M.A.

With 8 Illustrations. Crown 8vo, 304 pages. 5s. net.

## OLD FRENCH SONGS FOR THE NURSERY.

Arranged and Illustrated by ANNE ANDERSON.

Accompaniment printed boldly for use at the Piano.

With 8 Colour Plates and many Line Drawings and Decorations.

Size 11½ × 8¾ inches. 6s. net.

This Collection comprises some thirty traditional nursery songs.

*Music.*—"The melodies are simple and beautiful in true French manner, and the pictures are dainty both as to drawing and colour."

JUST READY.

## NATURE STORIES TO TELL TO CHILDREN.

By H. WADDINGHAM SEERS.

## POÈMES ET CHANTS DE FRANCE.

Edited by W. M. DANIELS, D.Lit., and

RENÉ TRAVÈRS, Professeur au Lycée de Versailles.

Small crown 8vo, 128 pages, 1s. 3d. net.

Also with some Translations and Vocabulary, 1s. 9d. net.

A representative selection of French verse suitable for use in English schools, including some poems set to music.

**GEORGE G. HARRAP & CO., 2-3 Portsmouth St., Kingsway, W.C.2**

(GEO. G. HARRAP and G. OLIVER ANDERSON, Directors.)

*Is All Well with England?* A Question by Marie Corelli.  
(6d. net. Jarrolds.)

In this little brochure the well-known novelist takes a hopeful line and thinks that though there is much to be done England will come out of the fire purified.

*Palestine. A War Map.* (6d. net. Johnston.)

A clearly printed map of the present war area in Palestine, drawn to a scale of eleven miles to an inch.

*The Adventures of Edmund Ludlow.* Told mainly by himself and arranged by T. A. Spalding. (1s. 6d.) Also Notes and Illustrations for Teachers' Use. (2s. 6d. Nelson.)

Edmund Ludlow's adventures during the stirring times of the Civil War make fascinating reading. The "Notes" give all the information that the teacher needs to enable the form to read the book with intelligence and interest.

*A Browning Anthology.* Compiled by F. A. Forbes.  
(1s. 6d. net. Oxford University Press.)

Following the design of the "Oxford Plain Texts," this edition contains neither introduction nor notes. There are nearly 100 pages of text, including shorter poems and some longer ones.

*Tales of a Wayside Inn.* By H. W. Longfellow. Edited, with Introduction and Notes, by J. H. Castleman. (1s. 3d. net. Macmillan.)

The poems occupy 130 pages. The explanatory notes are very full. Index, introduction, and an illustration of the wayside inn. A pleasant edition to read and hold.

"The Imperial Study Series."—*The Old Empire and the New.*  
By Arthur Percival Newton. Introduction by Sir Charles Lucas. (2s. 6d. net. Dent.)

Some few years ago the Senate of the University of London established an Imperial Studies Committee, with Lord Milner as Chairman, with a view to promoting the study of the history of the Empire and of spreading sound ideas among the thinking classes. Dr. Newton is Secretary to the Committee and general editor of the series. The volume here reproduces a Course of Rhodes Lectures given in the spring of this year.

*Letters on the Spirit of Patriotism and on the Idea of a Patriot King.* With an Introduction by A. Hassall. (2s. 6d. net. Clarendon Press.)

Internal evidence demonstrates that these letters were written by Viscount Bolingbroke, though no author's name appears on the title-page. They fill about 140 pages, preceded by an introduction of about thirty pages, which gives the historical setting necessary for the understanding of the text.

*Italy and the War.* Translated from the Italian.

By Annie Hamilton. (2s. 6d. net. Bell.)

This volume, published for the benefit of the Italian Red Cross, contains a number of essays written by professors of Italian Universities with the object of giving a reasoned statement of the cause for which Italy is fighting.

## The Duty and Discipline Movement.

**PATRON:**

Her Royal Highness Princess Louise, Duchess of Argyll.

**JOINT PRESIDENTS:**

Her Grace the Duchess of Newcastle.

The Rt. Honble. Lord Willoughby de Broke, D.L.

**FOUNDER AND CHAIRMAN OF EXECUTIVE:**

The Rt. Honble. the Earl of Meath, P.C., K.P.

**CHAIRMAN OF COUNCIL:**

The Rt. Honble. the Lord Rathcreedan.

**TEACHERS INVITED to act as HONORARY LOCAL SECRETARIES.**

THE Duty and Discipline Movement was founded to combat indiscipline and slackness in the national life, especially in the home and in the school, and to give reasonable support to all legitimate authority. The Movement, therefore, has strong claims upon the attention of all who are engaged in the teaching profession. At the present time efforts are being made to extend the scope of its activities and still further to increase its usefulness. Teachers who would be willing to act as Honorary Local Secretaries of the Movement are earnestly requested to write to the Secretary, who will send gratis and post free a special pamphlet for teachers, together with full information regarding the Movement. All communications should be addressed to—THE SECRETARY, The Duty and Discipline Movement, 117 Victoria Street, London, S.W.1.

The Educational Times.

Until further notice, "The Educational Times" will be issued four times a year—on the 1st of February, May, August, and November. The next issue will appear on November 1st.

Communications intended for the Editor should be addressed to The College of Preceptors, Bloomsbury Square, London, W.C.1.

THE GOVERNMENT AND PRIVATE SCHOOLS.

THE discussions on Mr. Fisher's Education Bill contain little of comfort or of reassurance for those who are interested in private schools. The pious aspirations of the measure, as described in the preamble of the original draft, included the provision of a "national system of education." This is a phrase which is open to several different interpretations and one which is of little help to us until it has been clearly defined. It may mean that all the educational forces of the country, of whatever kind, are to be brought under the direct and full control of the national or central administration. So defined, the phrase would express nothing more than an aspiration, since the political, ecclesiastical, and social forces of the country would prevent any such measure of full control. Another interpretation of the phrase may be that we are to have a national system developed as a thing in itself, complete and symmetrical in its parts, but not wholly comprehensive, since outside its confines there would be schools and institutions working in partial or complete independence of Government control. Such a system would stand as a kind of model or pattern designed to exemplify the Government's idea of what schools should be and of the relation between schools of different grades. A third possible interpretation of the phrase is that a national system may be set up which provides for a due supervision of every kind of

educational work but does not aim either at the suppression of non-Government schools or at leaving such schools to pursue their way in complete independence. This third interpretation would aim at a middle course between that of compelling all schools to be fully regulated by the State and that of pretending that schools which are not so regulated are officially non-existent.

It will be seen that everything turns on the meaning of the word "system." To some minds this word suggests a measure of rigid control and perfect balance, only to be secured by the activity of duly appointed officials. Where such officials are already in existence it is to be expected that they will take the view that a real "national system" can be promoted only under their own supervision. Inasmuch as the official administration has a large share in drafting Education Bills, it is to be presumed that it will show a tendency in its proposals to discourage all educational enterprise which is not to be brought under its full control. The possibility of being called upon to supply answers in Parliament to questions concerning matters over which its authority is less than complete makes any Government department reluctant to undertake tasks which have not been defined with exact precision. It is an almost invariable feature of officialdom everywhere that it shrinks from novel duties and new forms of responsibility unless it has had a share in defining them. Over the portal of every Government department might be inscribed Gray's line:

"Leave, oh, leave me to repose."

This being the nature of Government officials, we can hardly wonder that the Board of Education prefers to regard a national system of education as one which is fully under its supervision. Since it is impossible to have a controlled system which is fully comprehensive, we have the result that the Board is willing to direct a system which is complete in itself and takes no cognizance of privately conducted schools unless and until they are willing to become dovetailed into the official scheme.

This interpretation of the term "system," implying as it does a full control, is one which should be widened. We might speak of a national system of education even

if every school were working on independent lines, for the word "system" may be used to describe a method or practice in educational affairs, and we might have an English system of education which provided for the due supervision of every form of educational effort without making any attempt to prescribe regulations in detail or to effect a minute supervision of the work done in every school or institution. It is evident that the national welfare and the interests of the children may be held to call for some measure of public control over every educational activity. We ought not to permit a state of things which allows any person, however ignorant, to undertake the instruction of children. On the other hand, we have to recognize the fact that in such a highly organized country as Germany and in such a democratic community as the United States the people make use of privately managed schools. The preference thus expressed may be distressing to those who cherish a democratic theory, but it constitutes a factor which cannot be ignored. If we are to have a national system of education in England we must recognize the fact that our scheme must not be systematic in the rigid or official sense, but must be as free and elastic as is possible, consistently with the provision of such a kind of supervision as shall serve to ensure efficiency in education.

It is perhaps to be regretted that the case for a proper recognition of privately conducted schools has mainly been left in the hands of those who conduct them. Arguments coming from this source, however good in themselves, are apt to be discredited as being dictated by private interests. The controversy has tended to swing between official and supercilious phrases such as "private-venture schools," with retorts concerning the perils of "bureaucratic control." Such exchanges tend to engender heat rather than light, and the controversy assumes the nature of a mere verbal conflict. A more reasonable method would be for the Government to recognize frankly the existence of privately conducted schools and the impossibility of either suppressing them completely or of bringing them under full official control. The public and the great majority of those who conduct private schools would welcome any well considered and equitable plan for giving recognition to such schools, provided that such recognition were accompanied by a guarantee against the competition of State-aided schools and by such an amount of financial help as would enable the private school to carry on its work and would justify a corresponding measure of supervision.

The emphasis should be shifted from buildings and equipment to the teachers. Government supervision in any field of educational work should be directed primarily to the securing of a well equipped teaching staff. This done, the teachers should be left alone, for any attempt at detailed control will merely defeat its own purpose. When the Government has realized

that a national system of education can be built up only on the basis of an efficient and contented teaching staff it will recognize that the private schools of the country may become an integral part of the national system without any necessity for submitting them to minute regulation. Give us a national force of teachers and our national system of education will establish itself.

## NOTES.

THE prevailing ignorance of the doings of our schools was well illustrated in the discussions on the Education Bill in regard to physical training. The word "drill" excited the suspicions of certain

### *Military Training in Schools.*

members who appeared to imagine that physical drill meant military drill. On the other hand, some members pressed for the introduction of direct military training in the continuation schools. Nobody pointed out that in our elementary schools the physical training during recent years has been changed entirely from the old squad drill and has been based on the Swedish system of free exercises, designed to develop suppleness rather than strength. Nor did anybody remind Parliament of the still more important fact that in the Army and Navy the preliminary training of recruits is based on the same Swedish system, so that the young sailor or soldier is required to exercise his body by the same means as those used in our public elementary schools. Mr. Fisher might have met both sets of critics by telling them that the physical drill of our schools was not military but general in its purpose, and that instead of introducing Army training in our schools we were witnessing the introduction of school physical training into the Army and Navy.

EXAMINATION papers in French as set at present by the examining bodies concerned with schools are a compromise between the various methods of teaching in

### *Examination in French.*

use. Schools in which the direct method is wholeheartedly and unreservedly practised do not get an examination paper suited to their scheme of work unless a special paper is asked for and paid for by the school authorities. On the other hand, pupils taught on the traditional methods of language teaching universal in this country up to twenty years ago are confronted by a paper containing questions that appear to the pupils to be cast in a needlessly weird and unfamiliar form. These questions are put in to give the new methodists a chance. We think the Modern Language Association is right in asking that examining bodies shall now recognize the direct method, which has got beyond the experimental stage. In response to the urging of this Association, the Cambridge Locals Syndicate has embodied the test proposed as an alternative.

The proposals of the Modern Language Association are briefly these: The examination should be in two parts, oral and written. The oral examination should include dictation, reading aloud, and conversation. The dictation should be given by the teacher in the presence of the examiner, so that the pupils may not be confused by an unfamiliar tone of voice; and the examiner can judge how far the correct hearing of the pupils has been trained. For reading and conversation a prepared book of about 6,000 words is recommended, in place of desultory conversation on the weather and the age of the pupil. Classes can be taken as a whole or as individuals. The extravagant nervousness that used to characterize candidates for oral French entirely disappears in schools where oral work is of daily occurrence in class. If the candidates are taken singly, a reserve candidate should always be in the room waiting his turn. The written examination is to consist of two papers, covering, for the senior stage, three hours' work. About half the time should be given to translation into English. The Association recognizes that the power to understand the language should be tested by translation. An important proviso is that no passage given for translation should involve abstract conceptions which are above the candidate's mental level.

THE remaining part of the written examination should consist of writing French.

*Free Composition.* Direct grammar questions are discarded. The writing test is to consist, at the senior stage, of free composition only. No examiner of experience can doubt the wisdom of this step. The translation of English into French of quite 90 per cent. of candidates from schools is valueless. Questions involving free composition may be very varied. For the more formal essay the Association recommends that the free composition should take one of the following forms:—(a) A narrative of about 250 words, with a well defined plot, should be clearly read aloud in English twice by the invigilator to the candidates, who would then write it out in French with the aid only of headings given in French on the printed paper. These headings should not be given in the form of sentences—*e.g.*, not "César arriva sur la place," but "Arrivée de César sur la place." (b) A skeleton outline for expansion, given on the printed paper in French. This test may take the form of the continuation of a story begun in one of the passages for translation. This latter form of free composition has already appeared in many papers and examiners must be quite convinced of its value.

MR. FISHER'S message to teachers, which was read at the special service in the City Temple, merits textual quotation.

*Faith.* "None," he wrote, "would question

the appropriateness of teachers at the present crisis dedicating themselves anew to the national service. Every teacher worthy of the name must have a vocation in the religious sense of the word, though, as a great teacher once said, he should not often talk of it. He must have caught some glimpse of truth and of the inward freedom which truth alone can give, and must be inspired by the desire to turn the eyes of others to the light which he himself has seen. He must have faith—faith in his pupils and his work—and faith, despite all discouragements and difficulties, in the power of ideals to transform human nature. There never was a period in our history when teachers had a greater opportunity or a heavier responsibility. The nation is awakening, as never before, to the possibilities of education and to the necessity of combating ignorance in all its forms—physical, mental, and moral. The war is burning into all the value of knowledge, of ordered discipline, of devotion to a great and common cause; but there is the danger that in the reaction consequent upon peace and in the turmoil of material reconstruction the spiritual truths enforced by the war may be forgotten or obscured. It will rest largely upon the teachers to secure that these truths become part of the inheritance of the coming generation and that the full influence of education may be directed to the training of men and women imbued by lasting ideals of public service and self-sacrificing citizenship."

THE Imperial Studies Committee of the Royal Colonial Institute have addressed a letter to the Universities of the United Kingdom urging that arrangements should be made for the adequate teaching of Empire subjects. The Committee suggest that in every University there should be a Chair of Colonial and Imperial History. This chair should be adequately endowed, and the Professor should have one year in seven for travel, on full salary with travelling expenses, in order that he may study the countries whose history he is teaching.

### PARENTAL RESPONSIBILITY.\*

It is probably inherent in the progress of material prosperity that there should be a tendency to limit, and consequently to shirk, responsibility. The progress of material prosperity involves the differentiation of activities. Primitive man made his own boots, when he wore any; bootmaking is now a specialized trade, and a certain body of workers make boots or parts of boots, and do that work only. In order that they may devote all their energies to the making of boots, other people must supply them with food and clothing. In all departments of life the same tendency is displayed—a man's interest, and therefore his responsibility, are limited

\* Address given before a branch of the Parents' National Educational Union.

mainly to the one piece of work that he has undertaken. The education of children has naturally been affected by this tendency to specialize. Our bootmaker cannot make boots if his attention is called from his work in order to train his children; neither can his wife prepare her husband's food if she is teaching the little ones to read. Consequently a race of professional educators has come into existence. Parents send their children to school and pay, either directly or through rates and taxes, other people to do the work they have no time to perform.

The provision of schools is an inevitable result of civilization. Men and women who make it their work to teach children ought to do the job better than the parent, just as the professional bootmaker ought to be more skilled than the amateur. For many generations after the establishment of schools it was optional for parents to make use of them or not, as they chose.

Within the memory of some of us here the State laid upon parents the obligation of sending their children to school, and established penalties when this was not done. Compulsory education in a democratic community seems to need some explanation or justification. The democratic ideal is to leave every individual in the State as free as possible to lead his own life on the lines that he prefers. This freedom may some day become absolute if and when human nature becomes perfect. At present it is limited by an important proviso. The individual is free to do what he likes provided his actions do not injure his neighbour. For instance, a man can, if the whim so take him, eat cherries in the street and leave the cherry stones in the gutter. But he is not allowed to leave cabbage stalks in the road. The State considers that the cherry stones are harmless, but that the cabbage stalks might breed disease. In the present condition of our development it is clear that democratic freedom must be limited by the general sense, as expressed by elected rulers, of what is for the welfare of the nation.

The introduction of printing made compulsory education inevitable. This has happened in all Western civilized countries, however democratic their constitution. The compulsory education that modern nations began by enforcing was limited to instruction in the mechanical arts of reading, writing, and calculating, which form the basis of a literary education. Of course, for many years after Caxton started work, the printed book affected comparatively few people. By the middle of the nineteenth century the cheapness of paper combined with improvements in machinery had caused the printed word to penetrate into every town and village and almost into every house. At about the same period fresh groups of men were called upon to exercise the Parliamentary franchise. It seemed to the rulers of that day a positive danger that a number of electors should be unable to read or write. This illiteracy was also an undoubted inconvenience in industrial and commercial life. And so, in 1870, the movement began to complete the provision of schools for the children of the people throughout the country. A few years' experience of these schools convinced our rulers that Mr. Forster's aim of bringing education to every child had not been attained, and so the principle of compulsion was introduced. At first the proposed education was to consist of a study of the "three R's," as they were then called—Reading, 'Riting, and 'Rithmetic—and it was confidently expected by Mr. Forster that the education rate would never exceed 3d. in the £1.

The idea of compulsion, once introduced, has spread with marked rapidity. The "three R's" are only an introduction to the full and varied educational feast to which scholars are now admitted free. At the same time the responsibility put upon the professional teacher has increased until it seems possible that in the near future parents may divest themselves of parental duty and hand over their children, almost from infancy to the age of eighteen, to the care of the State acting through local committees and teachers. The position in England with regard to compulsory education is, or will be, when Mr. Fisher's Education Bill becomes law, as follows:—Every child from the age of five to the age of eighteen is compelled to submit to a course of training at the hands of professional educators. Nursery schools for children under five years of age are encouraged and will probably become in the first place general and finally com-

pulsory. For the greater number of children—i.e. those who go to the public elementary schools—full-time schooling is compulsory up to the age of fourteen, and part-time schooling from the ages of fourteen to eighteen. It is within the power of local education committees to continue the full-time education up to the age of fifteen. For children in secondary schools a curious exemption is permitted. If such children continue their full-time education up to the age of sixteen, and reach a satisfactory standard, they are at that age free from further educational control by the State. If it is permissible to use the old-fashioned words "masses" and "classes," it is noticeable that, while the children belonging to the masses remain under State tutelage until they have reached the age of eighteen, the children belonging to the classes may, if their parents so desire, cease their school education at the age of sixteen.

Since the days of Mr. Forster and the threepenny rate things have moved apace. The schools no longer limit their activities to the three arts of reading, writing, and calculating. The schools no longer assume that intellectual education is their only, or even their principal, object. The State, supported very rightly by public opinion, insists that the children shall have the fullest intellectual education that they are capable of absorbing, that they shall enjoy the best possible hygienic conditions, that their muscles shall be systematically and scientifically trained, and that their bodies shall, when necessary, be provided with food. The national attitude towards education has shifted from the standpoint occupied when the illiterate voter was looked upon as a political danger. The new attitude is well summed up by Mr. Fisher in the preface to a volume of collected speeches that has recently been issued. He points out that the argument in favour of equal opportunities for all "does not rest upon grounds of political prudence only, but upon the rights of human beings to be considered as ends in themselves and to be entitled, so far as our imperfect social arrangements may permit, to know and enjoy all the best that life can offer in the sphere of knowledge, emotion, and hope."

This changed attitude towards education is a very valuable asset in national life. It is no longer felt to be a question of the abolition of the illiterate voter; it is no longer a question of the inconvenience or even the harm done to commerce and industry when the workers cannot read or write. The feeling has now grown up that every child ought to have an opportunity of developing into a healthy adult, vigorous in body, free in spirit, disciplined in character, trained in mind. This feeling is not alone based on the desire that British industries should hold their own with foreign competitors, but includes also the desire that every child should have a fair chance for his own sake and not merely for the sake of his employer.

Good though it is, and indeed inevitable in modern civilization, that children should be handed over to the care of professional educators, there are undoubtedly certain disquieting symptoms that seem to result from the process. Probably ever since schools existed the schoolmaster has been blamed for the children's lack of perfection, whether that arises from original sin or from the example of parents. Many people call the schoolmaster an ass for choosing such a profession. The appellation may be justified: through experience he has acquired the virtue of patience, one of the qualities attributed to that animal. He has always been blamed for the children's shortcomings and cheerfully he broadens his back to fit the burden. Just now he is praised or blamed for every indication of character, according to the mood of the public. When our soldiers go cheerfully over the top to face a ghastly death, the newspapers bid us recognize the value of the education given in the schools. When rowdism and pilfering increase in the darkened streets the magistrates blame the schools. When the merchant grows justly irritated with the new office-boy, he writes to the *Times* to pour scorn upon a mistaken curriculum.

From time immemorial it is probable that the schoolmaster has been praised or blamed according to the mood of the parent, as if he were the only educational influence in the child's life. But, at any rate, the schoolmaster is a person known to the parents. It is somewhat different when the State steps in and controls the children. The parent, whether he be irate or grateful, cannot step across the road and have a chat with the State. If he have a grievance, legitimate or supposed, he

can write to the papers, organize meetings of protest, or get questions asked in Parliament. But all of these are cumbrous methods and generally futile. The fact stands out that State organization and State control tend to remove the matter organized or controlled from the interest of the people. The result is greater and blinder reliance upon the State and less upon personal initiative. Education, as most parents are coming to think, is a matter for the State and the State alone. Let members of Education Committees or members of Parliament see to it, is now the cry. The parent feels that he has no responsibility and no power: the matter is taken out of his hands.

There are two definite weaknesses in State control as it exists to-day. The officers of a Central Board are not in touch with those whom they control: the removal of control from the locality dries up local initiative and effort. In the case of education, there are, it is true, two modifying influences: certain officers of the Board travel round the schools and come in contact with the teachers, and there are local committees with limited powers, which can lay their views before the Board. In spite of these two modifications the government by a central bureau is of necessity somewhat uniform and unyielding. Of course it need not be so. A democracy means that we, each one of us, you and I, are the government. Practically it is otherwise; and in a community of 40,000,000 persons we have been compelled, by the law of specialization, to evolve a group of professional politicians, and another group of professional administrators, just as we have called into being a race of professional teachers.

The removal of responsibility inevitably produces a changed mental outlook. Speaking generally, we do not feel that the State is ourselves: on the contrary, the usual feeling is that the State can be cheated or squeezed with an easy conscience. When education is controlled by a distant outside body, over which we have little influence, and about which we know little, the tendency is to grow indifferent to education and to leave it to the specialists. The same tendency may be seen when the controlling body is not far distant, but is in our midst. An example may be taken from this locality. When the Corporation of the adjoining borough laid out as pleasure grounds the banks of the river, a notice was erected on the Promenade containing these words: "The Public is requested to protect what is for its enjoyment." The town councillors of that date seemed to think that a corporate conscience would be evolved and that each individual would look upon communal property as his own. Later, an additional notice was posted containing stringent regulations with penalties for their enforcement. It seemed that what belonged to everybody belonged to nobody, and that nobody was concerned in its protection, except the police. An illustration of the changed mental attitude that results from State control may be taken from an experience of the present writer. It happened one day that he was in the office of the managing director of an industrial concern that had recently been taken over by the Government. A clerk came in to consult the manager and asked: "Shall we cable?" The manager said: "It will cost a lot, and I don't think it is necessary." The clerk replied with a grin: "Well, the cost won't make any difference to us now." As the Government had taken control and had guaranteed a certain dividend, already in the clerk's mind had come the feeling that the need for economy in management had been removed.

This inevitable change in mental outlook is the main argument against the concentration of power in a central body such as the Board of Education.

We have grown accustomed in these days to look for direction to Government departments. But it was not always so. In the past it has been groups of men in towns who developed their own orderly government. Consider the history of any borough, and it will be seen that the burgesses of Tudor England were capable of self-government without direction from a central body. In the matter of education the following extract from a historian is interesting, both as showing what local effort could do and as almost foreshadowing the provisions of Mr. Fisher's Bill. It refers to the fifteenth century. This is the passage:

The London apprentice was a person of importance. His studies and recreations were alike regulated: he was required to attend church and hear sermons, and to learn his catechism on Sundays and Holy Days; he was subject to public reproof and penalties in the Guild

meetings if he wasted his time or failed to become reasonably efficient in his work, and he could be publicly whipped for misconduct. In his leisure time, and on Sundays and Holy Days, after divine service, he was required to attend at Smithfield or Finsbury Fields for drill and archery practice.\*

Here we have, some four or five hundred years ago, organized by the master craftsmen themselves, the practice of the very activities that Mr. Fisher seeks to make compulsory by an edict of a central body: character-building, technical instruction, physical drill. The difference is that in the fifteenth century the comparatively small group of London craftsmen organized the education of their apprentices because they were convinced of the value of the discipline they enforced; while to-day employers and young workpeople are presumed to be so little alive to the need for education of mind and body that the State, through the magistrate and the police officer, must compel the one to be instructed and the other to allow time for instruction.

It is arguable that the very attempt at compulsion defeats its own aim. The compulsion applied to apprentices in the fifteenth century has not survived. The thinking animal hates to be compelled against his will, and what he does unwillingly by order is not well done. There are certain arguments in favour of compulsory education up to the age of fourteen. Up to that age children are accustomed to, and do not resent, a greater or less amount of coercion. At the age of fourteen the critical faculties develop, the sense of individuality becomes more insistent. If such boys and girls are not convinced of the value of education, and have no hunger and thirst for it, they will gain no benefit by being driven into classrooms; they will merely disturb the teachers and retard the work of the willing pupils.

The first evil inherent in the system of State compulsion is that parents cease to be interested in the education of their children; the second evil is, at any rate after the age of fourteen, that unwilling work done under compulsion is not good work, and its effect on development of character is harmful.

So far the argument has been directed mainly to the classes who use the public elementary schools, the children from which are to be driven into continuation schools. But the rigid hand of the State is also stretched out to grasp the control of the schools to which members of this audience send their children, i.e. the secondary schools. Indirectly they are affected by Mr. Fisher's Bill because pupils of secondary schools who are under sixteen years of age may be called upon by Local Education Authorities to prove that they are receiving an efficient full-time education in order to free themselves from the duty of attending continuation schools. Directly, the Board of Education have recently taken a step which will eventually give them complete control over the secondary schools of this country. The Board, acting with the advice of the Secondary School Examinations Council, appointed in August 1917, propose to control the examinations of secondary schools. Consequently the Board will control the subjects taught and the methods of teaching them.

The Board have just issued (March 1918) a list of examinations approved by them, and for which they pay the fees. By a bribe of £2 per pupil they practically ensure the choice of the examination they have approved.

The tyranny of the Board has now reached considerable proportions, and it is likely that in the near future a reaction towards greater local freedom will take place. It is also likely that there will be a complete change in the organization of the central body. The Board consists of politicians, and civil servants trained in methods of administering Parliamentary grants. As educational control now covers far more than educational finance, it seems fairly obvious that, in addition to the Minister of Education, there must be an effective Council of National Education, which shall include, as well as administrators, men and women skilled in educational science.

It is an error that the central Government should control education, because thereby local and individual interest are killed. It is, however, apparent that the nation, waxing fat in pre-war days, was quite ready to be relieved of responsibility, and that parents were quite ready to acquiesce cheerfully when other people managed their children for them.

\* "William Caxton." By Susan Cunningham. Page 22.

This tendency to throw the responsibility on others is and has been strongly marked in the case of the well-to-do classes who send their children to boarding schools. Mr. Fisher pointed out a short time ago in one of his addresses that the working man's child does sleep at home every night. The well-to-do classes in this country have grown so accustomed to the use of boarding schools that a change is difficult to make. The advantages of boarding schools are clear. In them a boy learns above all things the art of living: he learns how to get on with other boys, how to control his own impulses in order to fit in harmoniously with the social life in which he is placed.

It is difficult to say of any boy or girl that he or she would not be better in a good boarding school than in passing the corresponding years at home. Home life is by no means always suitable for the upbringing of children. In many homes, and perhaps this is a further instance of the general desire to shirk responsibility, there is but one child in the house and a boarding school seems to be the only way to get companionship. But the disadvantages of boarding schools are not so often dwelt upon. The reason is that boarding schools are an institution to which we are accustomed and of which we are justly proud. One of the characters in "W. E. Ford: A Biography," calls boarding schools by the title "artificial orphanages." The life is artificial and the children are separated from their parents. It was said a few sentences back that boarding schools teach the art of living; but there is an important limitation to be noted.

Boys in boarding schools learn how to live with other boys of their own class; but they learn nothing of girls, of women, or of men. The artificial separation of boys and girls for four or five years of their lives is a serious matter, and great care is needed to obviate the disadvantages of the practice. Perhaps in schools for girls, staffed as they are mainly by celibate mistresses, the disadvantage is even greater than in the case of boys. Unmarried mistresses, "the withered vestalhood" as they are called by "Helen Hamilton," a lady who was once a teacher in this neighbourhood—unmarried mistresses only sometimes possess the sympathy and insight that comes with motherhood.

Another result of boarding-school life also involves disadvantage to the growing boy or girl. The children come home, partly as strangers, partly as guests. The ordinary routine of home life is interrupted. Discipline is relaxed; self-indulgence permitted. The frequently used phrase, "it is only for the holidays," indicates that the home life of children from boarding schools is artificial just as the school life is artificial. The fact is—to quote another phrase from "W. E. Ford"—"a vicious circle" has been formed. The natural thing is for boys and girls in a family to be brought up with their father and mother. Each character reacts on the others; the children learn to consider the grown-up point of view; the elders are influenced by the necessity of providing the best possible conditions for the development of their offspring. But in the classes that we are considering there is no such tradition of home life. The father, as a boy, was sent to a boarding school, just as his father before him. He has had no experience of a home in which the children remain during the school years continuously under the parental influence. He must send his boy to a boarding school because he would not know what to do with him at home. And, as things are, it is frequently better that he should do so.

In these two ways the symptoms of the national attitude towards education appear to be disquieting. The tendency of the State is to undertake more fully the control of the young citizens and the extension of the control to a later age. It is indeed essential for our well-being as a nation that each individual should have the fullest opportunities of a healthy life; but compulsory continuation classes will not of themselves effect this. On the contrary, it may be that compulsion will destroy good will. It is perhaps equally essential that parents should not shirk their duty towards the children. Parents may call in the professional educator to their assistance, but they should not hand over to him the whole work of education; they themselves should co-operate in the task. A professional class has a tendency to form "a mystery of the craft" from which outsiders are jealously excluded. The schoolmaster is inclined to take up an attitude of omniscience that prevents discussion or inquiry on the part of parents. A

schoolmaster stands somewhat aloof from life; his expert knowledge is often limited to a very small part of the influences that go to make up a complete life. He may be looked upon as the specialist consultant, but it is the parents who are general practitioners charged with the duty of general supervision. If the schoolmaster is aloof from life, it is evident that a State Department is still more alienated from popular feeling. But the evils noted here are already recognized, and recognition of an evil is the first step towards its abolition. The remedy seems to lie in a mutual recognition on the part of those who supply education (the schoolmaster, the local Committee, and the central office) and parents that there is for each a complementary duty which neither ought to shirk. School education is only a part of the influences that mould the character of a boy or girl. Neither the teacher in a day school nor the manager of an "artificial orphanage" should even wish to attempt the education of a child without the fullest co-operation on the part of the parents.

### ADVANCED COURSES IN SECONDARY SCHOOLS.\*

THE Board think it desirable at this time to set out, for the information and guidance of school authorities, the principles on which the provisions for advanced courses under the regulations for secondary schools have been framed, together with a statement of the progress already made, and notes on certain doubts or difficulties which have arisen.

Up to the middle of November, between 270 and 280 applications for recognition of advanced courses had been received. Of these the greater number came, as was to be expected, from schools in large urban centres; but a considerable proportion came from schools in rural or smaller urban areas which already provide advanced instruction and send pupils on to the Universities. The geographical distribution of the applying schools is uneven, and there are large areas from which no applications have been received. About half of the applications were in respect of advanced courses in science and mathematics; of the remaining half, those for courses in classics were little more than one-third of those for courses in modern studies.

Up to the same date, 63 courses in science, 13 in classics, and 19 in modern studies had been recognized, either without qualification or subject to certain conditions being met. Nearly 50 were still undetermined, chiefly because fuller or more satisfactory proposals for application of the grant payable under Article 50 were required. In the remainder (about 130) recognition was withheld, either because the syllabus of instruction submitted was unsatisfactory, or because it was not shown that it could be satisfactorily carried out, or because a reasonable number of pupils qualified to enter on the course was not forthcoming. The proportion of refusals was much largest among modern studies courses. This is due partly to the fact that this type of course is more of a new departure than the other two, but more largely, as explained in paragraphs 3 and 6 below, to failure on the part of school authorities to grasp fully either the meaning of advanced work, or the principle of coherence, in such a course.

In any new educational departure, before it has been tested in working, obscurities are found and misunderstandings arise which cannot readily be foreseen. Those that have in fact been brought to the Board's notice can now to a large extent be cleared up by further definition, and this Circular will, the Board hope, be of use as regards both criticism and administration of the regulations.

1. The Board desire in the first place to make it clear that the provisions embodied in Chapter VIII of the Regulations, while they are based on certain definite principles, are in their details necessarily of a tentative and experimental character. They must be reviewed, and probably both extended and modified, in the light of experience as it accumulates. Useful exchange of views has already taken place with the governing bodies and head masters or head mistresses of individual schools, with associations of teachers,

\* Circular issued by the Board of Education.

and with bodies representing the interest of particular studies. The Board invite expert criticism and suggestion from all quarters, with a view to revision as regards both the scope and content of courses suitable for recognition, and the detailed conditions under which any such course can be recognized.

2. The Board regard two general principles as essential. These are that an advanced course (1) must provide continuous, coherent, and systematic instruction in a group of studies which have organic unity, and (2) must be taken in common by pupils working together as a class and sufficient in numbers, regard being had to the size and circumstances of the school, to justify special State aid. In other words, the regulations are not meant to encourage either "fancy" courses in an arbitrarily selected collection of disparate subjects or courses, however good in themselves, followed by one or two individual pupils only. Further, not only should the bulk of the school-time of the pupils concerned be assigned to the group of subjects taken as the advanced course, but the substantial nucleus of instruction given in that group should be the same for all the pupils following the course. Variation as between one pupil and another in the subsidiary subjects they take is allowed, so far as the special aptitudes of the pupils render desirable and the possibilities of the school time-table permit.

3. The general principles of school organization in conformity with which the advanced course regulations have been framed were set forth at length in the Board's Circular 828 on Curricula of Secondary Schools, issued in 1913. If the recommendations and suggestions contained in paragraphs 38 to 55, pages 19 to 24, of that Circular had received greater consideration, much misapprehension would have been avoided, and many difficulties need not have arisen.

4. In classifying advanced courses under one or other of the three groups named in Article 48, the Board had regard to these principles, as well as to the immediate need of providing, by expansion of the existing organization of schools, larger numbers of pupils adequately prepared for further study at a University or institution of University type. Their object is to encourage higher work in schools, and give it a definite direction. Within, or in connexion with, these groups substantial provision can be made for such advanced study as is proper to the scope of a secondary school; and this applies not only to pupils who proceed to a University, but to those who will complete their general education at school, and pass directly from school into the occupations or professions which they take up.

5. Representations have been made to the Board that in the groups as defined no sufficient recognition is given to such important subjects as English language and literature, geography, art, civics and economics, commerce, and domestic subjects. These representations are being carefully considered. But for the present what is most needed is concentration. Any substantial multiplication or subdivision of the three types of course now recognized would be attended by serious risk. Of these other subjects some, such as geography, may be and should be provided for within or in connexion with one or another of the three recognized groups; while others, so far as specialized or intensive study is concerned, are outside of the proper scope of secondary-school work. Further, considerable latitude is allowed in science and in modern studies courses as regards the choice of constituent subjects, and the relative importance given to each; and the syllabuses of courses already recognized show large variations.

6. In the preparation of syllabuses for proposed courses, especially in modern studies, proposals have been submitted which have had to be rejected or referred back for substantial amendment on the ground that they do not embody the principle of coherently grouped studies. A very common fault is the absence of any attempt at correlation of history with the period of modern literature chosen for special study. It is not required that all the subjects in the group should be carried up to the same standard. Predominance may be given to history, or to two languages, or to history and one language, so long as organic connexion between history and literature, as well as strict linguistic study, is secured. One language must be carried to the standard at which it can become the basis for history and literature; in the other, a

lower standard of proficiency may be accepted. From the study of history that of geography is, of course, inseparable. A number of schools, instead of framing their own syllabuses, have merely referred to some examination syllabus (for instance, the intermediate syllabus of a University) as indicating what they proposed to do. Such syllabuses may suggest the general lines of advanced course work, but cannot be assumed, without close scrutiny, to be satisfactory for determining its scope and contents. These should not be determined by any external syllabus at all.

7. A special note is required as to the position which Latin should take in a modern studies course. In a very large number of these, Latin has been proposed as one of the two languages to be taken. But it has generally been assumed that it will be of the same kind as the Latin in a classical course, with the result that it is left unrelated to the other subjects. To secure this relation, stress should be laid on acquiring the power of reading Latin rather than on prose composition or minute grammatical work. Among works of the classical period those should be selected which have had the most important influence on the literature of modern Europe, and provision might be made for the reading of some amount of medieval and later Latin, particularly of works which are concerned with history and are indispensable towards its adequate study.

8. Special importance is assigned in the Regulations to continuance of work in English by pupils following an advanced course. Proficiency in English is essential alike as the basis and as the instrument of all advanced studies, and of their effective use in later life. Adequate attention should therefore be paid to it in connexion not merely with a modern studies course, but with an advanced course of any type. While the share of school time directly given to it will be limited, much valuable work may be done out of School hours by systematic and exact reading, properly directed, supervised, and tested.

Some questions have been asked as to the meaning of "the English language" in the last clause of Article 48. It may be well therefore to say here expressly that it is to be taken in its wide sense, not as mere linguistic training, but as education in the reading and writing of good English, with accurate study towards that end of some masterpieces of English literature.

9. Some schools can organize two or even three advanced courses; but in many others, the effective organization of more than one will not be practicable. The establishment of such a single course will tend to give a particular impress to the scope of the whole school work. But it need not, and should not, follow that the range of the curriculum will be unduly restricted or that premature specialization will be encouraged. Schools will, with a certain differentiation of type, continue to give a sound general education on broad lines. If this can be achieved, a distinct advance will have been made towards the organization of higher education. Within any given area, it will be possible to plan provision in correspondence with local requirements, to avoid overlapping and duplication of work as between one school and another, and to economize teaching power by using it to the best advantage.

10. While the education of girls should be in no way inferior to that of boys, the educational requirements of boys and girls, like their capacities, are not identical. Girls' schools, though their curricula are largely (perhaps too largely) modelled on those of boys' schools, have characteristic features which call for special treatment. It may prove in the light of experience that the regulations should be modified in this matter, or that the case can be sufficiently met by further use of the adaptation of syllabus already permissible. Such subjects, for instance, as art and housecraft may, where conditions are suitable, be properly taken as subsidiary subjects. This is a matter to which the Board are giving careful attention, and to which they invite the attention of school authorities.

11. It is not the intention of the Board that any part of the advanced course grant shall be devoted to remission of fees or provision of maintenance allowances. The grant is meant to secure the efficient staffing, equipment, and conduct of the advanced course itself, and effective preparation for it throughout the school. Its first and most important object is the

adequate remuneration of the teachers concerned. In submitting proposals, details should be given of the expenditure proposed to be made out of this grant under the heads of (i) salaries of teachers taking part in the work of the course; (ii) apparatus, books, and other equipment necessary for the course and the work leading up to it. In the matter of salaries, the Board are urging that a teacher qualified to take a principal part in advanced course work should receive a salary of not less than £300; and school authorities should bear this in mind as a general principle in framing their proposals for application of the grant. The institution of salaries on a generous scale, with secured increments, is essential not only for acquiring, but for retaining, the services of the specially qualified staff which an advanced course requires. It is, of course, to be understood that in particular cases a much higher salary than £300 may be not only proper, but necessary.

12. Where a school is unable to make adequate provision for advanced work, the principles set forth in paragraph 9 of the explanatory note to the regulations, which are based on the fuller statement made in paragraphs 20 and 56 of Circular 826, will apply. Where transfer at an earlier stage has not been effected, it is open to school authorities to admit to an advanced course pupils who, having reached the due stage of proficiency, are transferred from another secondary school which does not provide a similar course. It is also within the competence of a Local Education Authority to provide special maintenance or travelling allowances, where required, for pupils so transferred. Some Authorities are already making special arrangements for this.

13. The Board are fully conscious of the difficulties and drawbacks incident to a system of transferring pupils at this period of school life from one school to another. These may include, besides the minor consideration of loss of grant in respect of the transferred pupils, removal from the school of specially proficient pupils who are the school's own product and exert a good influence in it; and, most important of all, the risk that a school's sense of corporate unity may be enfeebled, that its development may be arrested or discouraged, and that it may find difficulty in creating within itself the nucleus of an advanced course. But the Board are glad to note instances in which a head master, taking a large and generous view of the position of his school in a wider system, has expressed the desire to transfer his own best pupils to a school where their needs can be more effectively met. As already pointed out, it is not in fact possible for every secondary school to provide an advanced course at all, or for a large number of schools to provide more than one such course. The principle of transfer, while it must be very carefully and considerately applied, is therefore essential towards bringing the benefits of advanced courses within general reach. The effective organization of secondary education in an area is impossible if each school is treated as an isolated unit, free to take its own line independently of all considerations except its own efficiency and prestige, competing and not co-operating with other schools. It is not contemplated that in any case an advanced course will be followed by the whole of the pupils who remain at school after reaching the age and standard at which such a course may be begun; neither is it the Board's intention to press the transfer of pupils against the advice of the head master or head mistress, or the wishes of their parents. What the Board are concerned with is that it should be recognized that the provision of facilities for transfer is a proper function of schools which claim a place in the polity and system of public education, and that co-operation between them in this matter is really important.

14. Where two or more schools can arrange for mutual transfer of pupils so as to create a really strong class in each school for a particular type of advanced instruction, these difficulties need not arise; and it is obviously advantageous, not only in the general interest of the pupils, for whose sake the schools exist, but also of the schools themselves, that there should be, in a single area of accessibility, different schools providing well organized instruction in science, in classics, and in modern studies, rather than that each school should be attempting, probably without success, to provide for the different requirements of two or three groups of pupils following different courses. Without co-ordination, and some corresponding differentiation of function, it is clear that there

must be waste of energy and of teaching power, and failure to make any rapid or steady progress. It is not extravagant to hope that a school may find, in the record of pupils whom it has sent on to receive more advanced instruction elsewhere, a prestige and a consciousness of useful work done equivalent to any that it could obtain by endeavouring to do what is beyond its power, or, if within its power at all, only by sacrificing the interest of the main body of its pupils to that of a few picked boys or girls.

15. Where there are a boys' and a girls' school in the same neighbourhood, the Board will not decline to consider proposals for arrangements under which the advanced course organized by one school should be attended by qualified pupils from the other. Whether these pupils should be regarded as members of one school or the other, and to which of the two schools the Board's grant in respect of them under Articles 36 to 42 of the Regulations should be credited, are points which may be met by local agreement, and which need involve no special difficulties.

16. No minimum number of pupils has been prescribed as the "reasonable number" required under Article 49 (c) of the Regulations; the number must be reasonable having regard to the circumstances of each case, and there must be the prospect of a steady and continuous supply of qualified pupils. Where there are few or no pupils ready to take the second year of the course forthwith, there must be sufficient assurance that those entering on the first year will proceed to complete their course in the second year. The grant is made for maintenance of a course actually taken by a number of pupils amounting substantially to a class; it is not given merely in order to enable a school to work up towards the creation of such a class at some future date.

17. Where schools are in close proximity, and the combined numbers of advanced pupils are not large, the establishment of a separate course of the same type in both would mean waste of expenditure and teaching power. Such cases clearly call for co-operation of the schools after discussion in conference with H.M. Inspector. Failing agreement for such co-operation, the question will be of recognizing one school rather than the other, and in this a governing consideration will be the relative strength and qualification of the staff and the relative completeness of the equipment in the two schools.

18. On the application of the Local Education Authority the Board will be prepared to sanction suspension of pupil-teacherships in order that the pupil-teachers concerned may have the advantage of taking an advanced course for the full two years as ordinary pupils.

19. The Board recognize that the organization of advanced courses has been attended by special difficulties, both from the depletion alike among teachers and among older pupils due to the War, and from the shortness of the time between the issue of the Regulations and the commencement of the current school year. They are convinced, however, that it was right to proceed in the matter, even though experimentally, at once. A large number of advanced courses are already recognized and in full working; and the practical experience now being gained will be of the greatest service towards the future. Some apprehension has been expressed as to the position of schools which have failed at the outset to obtain recognition of an advanced course; and it has been suggested that they are thus discouraged from attempting advanced work, and feel themselves relegated to a lower grade, from which it will be difficult to rise into a higher. The Board believe these fears to be exaggerated. While concentration and selection are indispensable, and the object of the Regulations would be defeated if too low a standard of advanced work were set, the Board anticipate that next year, when the principles set forth in this Circular are more fully grasped and any modifications which may prove necessary are made in the Regulations, the number of qualifying schools will be largely increased; and, in particular, that many which have failed to obtain recognition now will be able to obtain it then. Encouragement to renew application has, in fact, been given in about fifty cases.

20. In the task of considering the improvement and expansion of the provision now being made, the Board invite the assistance of Education Authorities, of representative associations of teachers, and of all bodies concerned with the interests of national education.

# PELMANISM AS AN INTELLECTUAL AND SOCIAL FACTOR.

It is occasionally urged that in the announcements of the Pelman Institute the business element is predominant, and that other aspects of Mind Training receive less consideration than they are entitled to.

The reason for this is fairly obvious. Business or professional progress is, in this workaday world, a subject which the average man or woman has very much at heart. Consequently, the financial value of Pelmanism is the point of primary attraction for, probably, 60 per cent. of those who enrol; but this circumstance does not in any degree dispossess Pelmanism of its subsequent importance as an educational and intellectual factor. Instead of two pages of an explanatory nature, a fairly lengthy volume would be required to do justice to this theme—the *higher* values of Pelmanism.

Far-seeing readers will be quick to appreciate this, and will recognize that a system which has proved of such signal value to the business and the professional brain-worker must perforce be of at least equal value to those whose occupation is mainly intellectual or social. If assurance were needed upon this point, it is abundantly supplied by the large number of complimentary letters received from those who have enrolled for the Course from other than pecuniary motives; the amateur and leisured classes being well represented on the Registers of the Institute.

The charms of literature, and in particular the beauties of poetry and descriptive writing, are appreciated by those who adopt Pelmanism as they never appreciated them before. Every phase of existence is sensibly expanded. Life receives a new and deeper meaning with the unfolding of the latent powers of the mind.

"I must have gone about the world with closed eyes before," was the remark of a well-travelled man after he had completed only half the Course. His ejaculation is significant. He is typical of many who, unwittingly, are living with "closed eyes." Indeed, if the Pelman System stopped short at its third book instead of continuing to a twelfth, it would still be a remarkable and valuable system.

In developing latent (and often unsuspected) powers of the mind, Pelmanism has not infrequently been the means of changing the whole current of life. Many letters might be quoted in evidence of this.

Again, there are numbers who avow their indebtedness to the Pelman Course in another direction—it has led them to examine themselves anew, to recognize their points of weakness or strength, and to introduce aim and purpose into their lives. Indeed, it is surprising how many men and women, including some of high intellectual capacity and achievement, are "drifting" through life with no definite object. This reveals a defect in our educational system, and goes far to justify the enthusiasm of those—and they are many—who urge that the Pelman System should be an integral part of our national education. Self-recognition must precede self-realization, and no greater tribute to Pelmanism could

be desired than the frequency of the remark, "I know myself now: I have never really done so before."

Self-expression brings us to another facet of Pelmanism, and a very interesting one. Even a University education may fail to equip a man or woman to maintain himself or herself creditably in the social sense. How often the clever scholar is a social failure—a nonentity even in the circle of his intimates! His academic "honours" have done nothing to endow him with personal charm or conversational power. His consciousness of a rich store of knowledge does not compensate him for the discovery that he is deficient in the important art of self-expression.

Tact, discerning judgment, adaptability, conversational ability, are not "gifts": they are qualities which can be developed by training. This is emphatically proven by the large number of letters received from Pelman students who have received almost unhopd-for assistance in this direction.

As a system, Pelmanism is distinguished by its inexhaustible adaptability. It is this which makes it of value to the University graduate equally with the salesman, to the woman of leisure and to the busy financier, to the Army officer and to the commercial clerk. The Pelmanist is in no danger of becoming stereotyped in thought, speech, or action; on the contrary, individuality becomes more pronounced. Greater diversity of "character" would be apparent amongst fifty Pelmanists than amongst any fifty people who had not studied the Course.

The system is, in fact, not a mental strait-jacket, but an instrument: instead of attempting to impose universal ideals upon its students, it shows them how to give practical effect to their own ideals and aims. It completes man or woman in the mental sense, just as bodily training completes them in the physical sense.

There are many who adopt it as a means of regaining lost mental activities. Elderly men and women whose lives have been so fully occupied with business, social, or household matters that the intellectual side has been partly or wholly submerged; successful men in the commercial world whose enterprises have heretofore left them too little leisure to devote to self-culture.

In Pelmanism we find a soundly scientific system of practical psychology which is, by universal consent, recognized as infallibly successful in the education of the brain. "Infallibly" is a dangerous word to use; but it may be confidently employed when speaking of the Pelman System of Mind Training. There is no case upon record in which conscientious study and application of its principles has failed to produce tangible results in the direction of development and betterment of mentality—this equally in the case of the most intellectual and best-educated types of men and women and those of inferior attainment.

"Pelmanism" is, in fact, an intellectual force of the first order, and no brain-using class can afford to ignore its

potentialities. Psychology is by no means a new science, but in "Pelmanism" it may be said to have reached the practical stage and to have become as definite a means of exercising and strengthening the faculties of the mind as physical drill is of developing the muscles of the body.

### 45,000 Enrolments in 6 months.

Every class is adopting Pelmanism and is benefiting therefrom. Over 45,000 enrolled in the first six months of this year alone.

Clerks, typists, salesmen, tradesmen, and artisans are benefiting by Pelmanism in the form of increased salaries and wages. Increases of 100 per cent. and 200 per cent. in salary are quite frequently reported; in several cases 300 per cent. is mentioned as the increase of salary due to Pelmanism.

Professional men find that "Pelmanising" results not only in an immense economy of time and effort, but also in vastly more efficient work. It says something for Pelmanism when members of such different professions as solicitors, doctors, barristers, clergymen, architects, journalists, accountants, musicians, and schoolmasters have all expressed their emphatic appreciation of the value of Pelmanism as a means of professional advancement.

Members of Parliament (both Houses), Peers and Peeresses, men and women high in social and political life, famous novelists, actors and artists, scientists, professors and University graduates and tutors—the "little grey books" have ardent admirers amongst all these. Even Royalty is represented, and by several enrolments!

Army officers who find that the routine of a military life invites intellectual stagnation—these find that the Pelman Course offers them a stairway up to the higher things of life.

Here are two letters which emphasize this. The first is from an Army student, who says:—

The Course has prevented me becoming slack and stagnating during my Army life—this is a most virulent danger, I may add. It inculcates a clear, thorough, courageous method of playing the game of Life—admirably suited to the English temperament, and should prove moral salvation to many a business man. "Success," too, would follow—but I consider this as secondary.

The other letter is from a lady of independent means who felt that, at the age of fifty, her mind was becoming less active:—

Though leading a busy life, my income is inherited, not earned. My object in studying Pelman methods was not, therefore, in any way a professional one, but simply to improve my memory and mental capacity, which, at the age of fifty, were, I felt, becoming dull and rusty.

I have found the Course not only most interesting in itself, but calculated to give a mental stimulus and keenness and alertness to one's mind, which is just what most people feel the need of at my age.

It would easily be possible to quote several hundred letters exhibiting different phases of the intellectual value of Pelmanism to men and women of all ages (up to seventy) and all stations.

Hardly a day passes at the Institute without at least one such letter being received.

In short, it is not merely the fleeting interest of a day that is served by the adoption of Pelmanism, but the interest of a lifetime. One may utilize the Course as a means of achieving some immediate purpose—financial, social, educational, or intellectual—but the advantages of the training will not end there. The investment of time will bear rich fruit throughout life, and, in addition to serving a present purpose, will enable many a yet unformed ideal to be brought within the gates of Realization.

### Immediate Benefit.

"Benefit," says *Truth*, "is derived from the very first, and this is the general experience of the vast majority of the students. Almost before they are aware of it, the brain is being set methodically to work on the lines which will bring out its full capacity."

### The Army and Navy.

Nearly 40,000 officers and men of both Services are now Pelmanists, the list being headed by one hundred admirals and generals. The mere fact that such a large number are studying the Course, in spite of such drawbacks as scanty leisure and adverse environment, speaks volumes for the estimation in which "Pelmanism" is held by the Services. Equally significant is the frequency with which generals send their subordinate officers to be enrolled, and regimental commanders often pay the fee for one or more of their N.C.O.'s.

### Professional Men and "Pelmanism."

All classes of professional men have displayed the keenest interest in the Pelman System. Doctors, solicitors, barristers, architects, auditors, journalists, authors, civil engineers, educationists—these have all enrolled in large numbers, and have supplied astonishing evidence of the value of the Course to them in their daily work.

### Over 250,000 Men and Women.

The Pelman Course has already been followed by over 250,000 men and women. *It is directed through the post, and is simple to follow.* It takes up very little time. It involves no hard study. It can be practised anywhere—in the trenches, in the office, in the train, in spare minutes during the day. And yet in quite a short time it has the effect of developing the mind, just as physical exercise develops the muscles, of increasing your personal efficiency, and thus doubling your all-round capacity and income-earning power.

*The Pelman Institute publishes a small Book, "Mind and Memory," in which Pelmanism is fully explained and illustrated; and a supplement treating of "Pelmanism as an Intellectual and Social Factor." These two publications, together with a reprint of Truth's Report on the Pelman Institute and its work, will be sent, Gratis and post free, to any reader of THE EDUCATIONAL TIMES who addresses a post-card to the Pelman Institute, 374 Pelman House, Bloomsbury Street, London, W.C.1.*

**OVERSEAS.**

AMERICA shows no falling-off in the ingenuity she has always displayed in meeting the needs of the moment. Just now the urgency of strengthening the national feeling is prominent, so a national creed has been called for, and in their characteristically practical way the Americans set up a competition. It appears that Baltimore is the place of origin of "The Star-Spangled Banner," and as such felt called upon to take the initiative by offering a prize of a thousand dollars for the best Creed. A representative national committee was appointed, and Mr. William Tyler Page, of Maryland; pocketed the thousand dollars for the following:—

**THE AMERICAN'S CREED.**

I believe in the United States of America as a government of the people, by the people, for the people, whose just powers are derived from the consent of the governed; a democracy in a republic, a sovereign Nation of many sovereign States, a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes. I therefore believe it is my duty to my country to love it, to support its constitution, to obey its laws, to respect its flag, and to defend it against all enemies.

In keeping with this Creed is the declaration of principles issued by a group of American College and University teachers, who are of German birth. They "view with abhorrence and condemn without reservation the part which the German Imperial Government had in provoking or permitting the present world conflict." They proceed to disavow all the German principles subversive of international security and to express their "firm adherence to the political principles and ends for which the United States has entered the War." The declaration could hardly have been stronger, and it has been received with much satisfaction across the water. But the citizens cannot help scrutinizing the list of signatures, and as they find that "a good many college and University teachers of German birth are not found on the list," they wonder why.

A less satisfactory war matter is the marked falling off in the interest of school and college boys in military drill. In New York last year in many of the high schools from three to four hundred boys began military drill, while to-day not more than thirty or forty have come forward. The same is true of Chicago; and the school people are not consoled by the fact that in that city the girls are being taught "the manual of the rifle." The officer in charge is reported to have said that he knew that the instructors "will teach all school girls

so thoroughly that, if they were needed, America could have its 'Battalion of Death.'" The *Chicago School Review* characterizes all this as "plain and unadulterated foolishness and waste." But while it has no use for girl cadets the *Review* speaks very strongly of the remissness of the boys. It writes contemptuously of the boys' complaint that the drill is monotonous, and refuses to sympathize with proposals to make it more attractive by introducing extraneous matters. It maintains that "The cause for failure and lack of interest goes far deeper. Our boys are not being disciplined. We do not require them to fulfil functions of useful citizens either for peace or for war. . . . It may be that the nation needs to cajole her adult citizens, perhaps adults may not care to render service, or to get ready to render service, without receiving a *quid pro quo*. Affairs have indeed come to a pretty pass if we are compelled to baby our young men into loyal service. . . . Discipline! We may be compelled to sugar-coat their studies for Young America—but, alas! if we feel constrained to sugar-coat preparation for war in these days of anxiety!" No doubt the *Review* is right in speaking strongly about this apparent slackness, but we would rather this criticism came from the other side than from us. For our part we are convinced the trouble is merely the boredom of youth. If there were any immediate prospects of these young fellows having to put into practice the drill that they find so dull, they would treat it in a very different way.

In connexion with the relation between school training and military, a statement by Inspector Blayney, of Camp Funston, giving reasons why many candidates fail to secure commissions, is of great interest. His four main complaints are:—(1) "Slouchiness," by which the inspector means slovenliness of attitude and general physical indifference; (2) "Slouchiness of mental attitude," for the same indifference marks the mental side of the unsuccessful candidates' work; (3) "Inability to articulate clearly"—this, surely, could be attended to in schools and colleges; (4) lack of "grit." The inspector is careful to guard against suggesting that "they would have proved cowardly in battle, necessarily, but some have exhibited a tendency to throw up the sponge upon the administration of a severe rebuke or criticism. Their 'feelings have been hurt,' and they 'resign.' They have never been taught the true spirit of subordination. They are not ready for the rough edges of life." The inspector rightly remarks that the "idea of grit belongs in the school-room as well as upon the campus." Our only caveat is that care must be taken that the brutalizing methods of the illiterate drill sergeant should not be upheld as in themselves, and positively, desirable. The young men must submit cheerfully to authority; but the drill-sergeant must not be valued in direct ratio to his brutality. We must not forget the lessons of *Jena oder Sedan*.

The unsettling influence of the War is apparently disorganizing the schools among the other social institutions in America. Pupils seem to be attracted to work at too early a stage. At any rate the Bureau of Education is sending out copies of a statement of "Government Policies involving the Schools in War Time," in which we are told among other things that "Boys and girls should be urged, as a patriotic duty, to remain at school to the completion of the high school course, and in increasing numbers to enter upon college and University courses, especially in technical and normal school courses, to meet the great need of trained men and women." The dearth of teachers is making itself markedly felt in the States, and an appeal is being made for teachers who have been trained and have had experience but have since retired to private life, to come forward again to meet the national need. In the United States there is probably a larger reserve of such persons than we have in Britain. The professional life of the teacher in America is much shorter than with us, so there must be scattered through the States a large body of capable teachers who are able, if other circumstances permit, to take up their work again at any moment. While all this is true it does not appear as if our American friends sufficiently realized the fact that with them more than with us acting teachers are absorbed in other lines of work. With us in Britain "once a teacher" means practically "always a teacher," unless for the chances of marriage in the case of women. But in America our profession is often used as a mere preparation for something better. With men no doubt

this is less the case to-day than it was in former times. Among the women, on the other hand, with their greatly widened possibilities, there is an increasing tendency to make school-marring a stepping-stone to higher things.

The question of the German language in the schools of certain of the American States is becoming acute. No objection is as a rule raised to the teaching of German as a foreign language on the same lines as French. What is resented is the use of German as a means of communicating knowledge. In other words, the Americans are beginning to wake up to the possibility of segregation of nationalities in their midst, each speaking its own language. In all probability the danger is not great in any case except that of the Germans, and even among them it can be easily removed at the present stage. The country is ripe for a law that shall make it illegal to use any language but English in the actual work of teaching in the American schools.

## REVIEWS.

*The Foundations of Society and the Land.* By J. W. Jeurwine. (18s. net. Williams & Norgate.)

Looking at this book from the point of view of the practical teacher, its value is that it provides a storehouse of material from which he can dig at will. The great danger of the non-specialist who has to include history as one of his subjects is the lack of background. Now this is exactly what Mr. Jeurwine supplies in full measure. It is not to be supposed, however, that we have here one of those dead reservoirs of brute facts. It is not vivacity that is lacking. If the reader desires opinions he will find the volume teeming with them. All the same, we stick to our statement that the main value of the book is the material it supplies. For Mr. Jeurwine is the last man to claim or expect that his readers should take his opinions on trust. He makes no profession of impartiality, for "no one who is not idiotic can read and carefully consider masses of material on past events without forming a strong judgment, and if he expresses himself at all it is far more honest that he should express his own judgment as such than that he should pretend an impartiality which he cannot feel." Mr. Jeurwine seldom hesitates to express his opinion, but he does not expect to be slavishly followed.

What specially interests us in this magazine is the view our author sets forth on the teaching of history in schools. He is obviously not enamoured of the education of our time—he is one of those who like to write "education" within inverted commas—and he appears to think that the teaching of history is one of its worst features. He so far exonerates the teachers as to admit they are not free agents, and that the real sinners are the makers of textbooks and the drafters of syllabuses. We have to admit that there is much truth in his criticism that our textbook makers too frequently treat the characters of history as if these characters acted with a knowledge of the standards that future ages were to develop. He is right in warning us to judge historical personages in terms of the state of society in which they lived. He complains of the lack of atmosphere in the historical textbook, and he might have made the same complaint of the class in history. Mr. Jeurwine's own breezy pages do much to supply the lack, and the teacher who reads them will find himself continually caught up by some new way of looking at things, some apparent paradox that makes him rapidly reconsider his position to find out if haply he has been on the wrong tack all the time.

Our position as an island race is emphasized both in the direction of indicating its limiting force and in that of showing how we must widen the view of our pupils and lead them "away from Westminster." When he comes to his main subject, the relation of society to land, our author contrasts the two ideals—the feudal and the communal—and this contrast runs throughout the whole volume, and may be said to be its motif. By one of the contrasts that he finds specially pleasant, Mr. Jeurwine emphasizes the value of the land by extolling the commercial importance of the sea, and by warning us of the danger at the present time of being drawn away from our real source of strength by the popularity

of the land forces and warns us of what took place in France in the eighteenth century. The reader will find in the book a curious mixture of narrative, exposition, and criticism, but by taking pains he will be able to disentangle the various threads of thought and to follow the development of the various forms in which the feudal and communal ideals shape the social life at the various stages. Modern conditions are never far from the thought of the author at any part of the book, but towards the end he makes more direct applications, not all of them pleasant reading for Englishmen, for Ireland occupies a prominent place throughout, and we have nothing very agreeable to find in our dealings with that country either in the past or the present. On these unpleasant matters our author speaks with no uncertain sound, and, however much we may dislike the point of view adopted, we are all the better for going through the discipline of facing the facts presented and taking the trouble to make up our mind on the case as stated by a fresh and vigorous writer. The book is provided with an index, nine appendixes, a vocabulary of technical words and an interesting medieval map in a flap pocket.

*Examinations.* By P. J. Hartog. (8s. 6d. net. Constable.)

Since H. Latham's excellent treatise, nothing so good on the subject of examinations has been produced as this book. Mr. Hartog is a specialist in this matter, and has had altogether exceptional opportunities for reaching just conclusions. He is not only intensely interested in his subject, but has faced it in a spirit of thoroughness that would satisfy the most exigent of the Germans. The reader of purely literary interests may have some difficulty in following the mathematical arguments by which the author supports his theses, but no one will doubt that every precaution has been taken to secure full consideration of all possible points of view. Mr. Hartog's first important contribution to the subject took the form of an address to the Royal Society of Arts, in which he pled for a commission to inquire into and report on the methods of examination with particular reference to appointments and promotions in the Civil Service. He modestly disclaims any causal connexion, but has satisfaction in noting that a little more than a year after his address such a Royal Commission was appointed. This address is incorporated in the present book, along with Lord Cromer's contribution to the discussion. The next chapter deals with the Theory of Examinations, in which—perhaps inevitably—there is a certain amount of repetition of what has already been written in the first. Then follow sixty pages of notes, which put the reader in possession of the essentials of the Royal Commission Report, and of the Report of the Treasury Committee on Civil Service, Class I, Examination. Note E. is particularly important, since it gives an admirable critical exposition of Prof. Edgworth's investigation on the statistics of examinations.

As is made plain in the sub-title, Mr. Hartog regards examinations in two different relations, according as they concern culture or efficiency. He regards the cultured man as "the man who is sensitive and responsive over a large field of knowledge regarded as of value by the community." Now culture as thus defined covers, according to Mr. Hartog, exactly "that vital part of education which cannot be tested by the ordinary written examination." We have thus a most convenient dichotomy of school subjects into those that are examinable and those that are not. Whatever aims at efficiency in the technical sense of that word may be legitimately tested by examination; but Prof. Whitehead's "Activity of thought and receptiveness to beauty and humane feeling" must be exempt. A practical recommendation that will interest teachers is Mr. Hartog's proposal that pupils whose main subject is science or mathematics should be examined in these subjects, but should be taught, but not examined in, certain humane subjects to supply a balance; while students of "arts" subjects should be compelled to take up a certain amount of science work on which they in turn should not be examined. Here we must assume that Mr. Hartog means that the students of "arts" subjects are acquiring knowledge for professional purposes (e.g. as the stock-in-trade of professional teachers), and not as a means of culture. In any case he makes it abundantly evident that

he regards it as of fundamental importance that examiners in every connexion should be clear in their own minds about—and should make clear to others, and especially the examinees—what the purpose of the examination really is. To this point he returns again and again, and nowhere does he do better service than in thus stimulating us to a consideration of why we examine. Mr. Graham Wallas could find nowhere a better exemplification of his thesis that society does not always do things for the reasons that appear on the surface. The need for the training of teachers has only very slowly made itself felt to the general public. The training of examiners is only now beginning to be considered. Lord Rosebery has warned us of the folly of training teachers if we put them under the control of examiners who have not themselves been trained. He has deserved well of the State by calling attention to an urgent need, and Mr. Hartog has deserved still more by his lucid, learned, and practical exposition of the possibilities of examination as an educational and political instrument.

*A Schoolmaster's Diary.* By S. P. B. Mais.  
(6s. net. Grant Richards.)

Mr. Mais makes a valiant attempt to give an air of verisimilitude to this diary, "being extracts from the journal of Patrick Traherne, M.A., sometime assistant master at Radchester and Marlton," and, but for certain tell-tale slips in the matter of dates, succeeds wonderfully well. In any case he has produced a thoroughly readable book, one that interests not merely teachers but the general public. No doubt it has too much of the disgusting in it to make pleasant reading throughout for anybody, but when the author can forget unnatural vice he produces excellent artistic effects. One cannot but read into Traherne the qualities of Mr. Mais, and we quite agree that he has "heard views of life that I am sure never enter the heads of my colleagues." Mr. Traherne, in fact, is the incarnation of the sort of man that Mr. H. G. Wells describes as the ideal teacher; though writing a novel is one of Mr. Wells's requirements, and Mr. Traherne professes to be incapable of this. The interesting point for us is that, when we do get Mr. Wells's ideal, he receives just the treatment that a plain common-sense man would expect. Mr. Wells may demand a man who cares nothing for the *convenances*, who will wear a red tie if he likes, and decline to be dominated by petty social prejudices—but the public will have none of him. He will meet the fate of Mr. Traherne.

What can the ordinary schoolmaster think of a view of education like this? "I am coming to the conclusion that all true education is a striving after beauty, and what does not actively pursue this end is a waste of effort." But yearnings of this kind are not to be despised. They are certainly not dangerous: it is difficult to imagine the average schoolmaster—"like most schoolmasters he is quite without ambition"—being led to excess in the pursuit of beauty. So we ought to welcome all such attempts to leaven, in however slight a degree, the whole lump of our professional inertia. Mr. Mais himself makes capital play with the conservatism of the profession. The Head Master takes young Traherne aside and says: "The less you read about education the better. . . . I never engage a man who has taken a diploma in the theory of education. . . . I warn you against thinking that there is any reform needed. . . . Read no more upon a subject which you are called upon to practise, not to theorize about." Traherne did not like this, and attempted a defence, only to be silenced. Later, however, he remarks that in some ways the Head Master was right in telling him to read no books on education. "He was right, because I find nothing really new there." But Traherne can hardly be called an expert in the new, for, under the date of August, 1911, he describes "a new idea in English composition with the lower forms." This consisted in getting the pupils to describe a picture!

But it ill becomes us to dilate on occasional slips when we ought to be profoundly glad to find a writer of genuine artistic ability willing to do his best to rejuvenate our craft. He supposes that "no class of men dresses more shabbily than the schoolmaster," and he goes on to give reasons and supply examples. Traherne himself adopts a very generous

attitude towards his profession. His best work is done outside the limits of his bargain with the school governors, and is given willingly "without payment." When the end of term comes "Most masters are unfeignedly glad to get away. I never am." Further, he beggars himself by riotous tea-and-cake giving to boys who care to come to his rooms and read and borrow from his library.

The book has the regulation amount of love interest, which will no doubt have its attraction for many, though perhaps in an *edited* Diary there is room for much excision here. The interest of the book is the view the schoolmaster takes of himself and his work, and no fairminded reader will deny that this is admirably sustained. The scrappiness and in-consequence of much of the text is not without charm, and lends an air of reality to the work as a diary, while giving Mr. Mais full opportunity of exercising his undoubted talent for brilliant exposition and criticism.

*Political Education at a Public School.* By Victor Gollancz and David Somervell. (3s. 6d. net. Collins.)

This book contains four chapters—The Political Principle, The Political Method, Two Experiments, and The Future. There is in addition an appendix containing reproductions of certain articles that have appeared in a school magazine, exemplifying the principles the authors recommend. The thesis maintained is that the public schools, as judged by the highest standard—"and those who love them will not care to use any other"—have failed, and that it behoves their friends to discover why, and to set them on the road of regeneration. The book really tackles the problem handled by Sir Robert Blair and others at a recent conference on the teaching of quite up-to-date history. It has been long felt that school history has usually stopped just at the point at which it begins to have a practical bearing upon the life of to-day. When history passes into politics it is regarded by many as unsuitable for the schoolroom, and it is just here that our two authors find the cause of the failure of the public schools. To get the best results we must face the actual problems of the day. We must fall back upon humanism as it was understood by the men of the Renaissance. Capital play is made with the transition from matter to form, and a strong plea is entered for a reversion to the ideal that valued the classics as much for the subject-matter as for the elegance of diction. The same principle is applied throughout—to history, English literature, even to Divinity. It is indeed refreshing to find such vigorous and fresh ideas from the seats of ancient learning. There is hope for writers who can honestly regard *Paradise Lost* as "a good classroom book," and can unaffectedly speak of its story as "amusing." Divinity is treated in a way that may startle the more hide-bound teachers, but nothing is said wantonly to hurt the feelings or even the prejudices of those with whom the authors cannot agree. It is worth noting that, while the text is eminently bright and readable, it is in no sense flippant.

The first of the two experiments is the foundation of a class for politics held out of school hours. It is a class, and not a club, and, in spite of hard desks, the absence of home comforts, and the presence of notebooks, the meetings have proved very successful. The joining of the class was voluntary, but once a boy joined his attendance was compulsory for the term, just as at any other class. The proof of success is that not only was the attendance such as to fill the largest available classroom, but the second term, when the members had a chance of withdrawing, had a larger enrolment than the first. A list is supplied of the matters on which lectures were given. There are twelve subjects, most of which get several lectures, the only three singletons being Alsace-Lorraine, Trade Unionism, and Liberalism. It is curious that Conservatism should require two lectures as compared with the one devoted to Liberalism, but something must be conceded to the *genius loci*. In any case our authors must be exonerated from any charge of lack of liberal views. To get trade unionism admitted at all to such a course is a sort of triumph. The authors make no pretence of camouflaging their real subject under the innocent name of "civics": they boldly proclaim that they are dealing with politics, and it is gratifying to find that the success of the experiment was in no way jeopardized by this refreshing directness. Out of this first experiment the second

naturally evolved. The school magazine had lately died a violent death at the hands of the authorities, so the young students of politics proposed to replace *The Gadfly* by a serious journal to be called *The Observer*. The account of this venture is really a brilliant bit of writing, in which *The Observer*—though "modelled on such weeklies as *The Spectator* and *The Nation*"—is not taken too seriously. The fact that the authors have had the courage to reprint several of *The Observer's* articles is the best proof that they are willing to abide by the decision of a discriminating public. The whole little book is an admirable counterblast to that professional dullness and lack of initiative that makes it possible for critics to speak of "the blighting hand" of the schoolmaster.

## GENERAL NOTICES.

### EDUCATION.

*Education for Liberty.* By Kenneth Richmond. (6s. net. W. Collins.)

Many readers will welcome another book from one of the joint authors of "W. E. Ford: a Biography"; and those who may have read some of the chapters in the *Times Educational Supplement* will be glad to have the whole in volume form. The earlier book was somewhat elusive in character; "Education for Liberty," with the exception of the last chapter, is more simple and direct; it takes the reader into the classroom and gently convinces him of the error of his cherished convictions. The last chapter is conjectural, and hints at the freeing of unsuspected powers of the mind. It may prove the inspiration of a further volume. "Liberty," in Mr. Richmond's sense, is of course freedom to develop power and thought to the utmost. That this may be possible much harmful school convention and restriction must be modified, and steel doors erected by school time-tables between subject and subject must be removed.

*The Dawn of Mind: an Introduction to Child Psychology.*

By Margaret Drummond. (3s. 6d. net. E. Arnold.)

Mainly it is mothers and nurses who have the charge of infants, so it may be supposed that it is to such readers that this book is addressed. As the standard of general education is undoubtedly higher than it was a generation ago, such an appeal will not be in vain, in spite of Mrs. Drummond's use of scientific terms and the bald statements sometimes necessitated by the need of condensing. But kindergarten teachers, and indeed all teachers, must study the dawn of intelligence. They will find here the latest results of infant psychology co-ordinated with the author's own observations and lightened by many interesting anecdotes of childhood.

*School Efficiency. A Manual of Modern School Management.*

By H. E. Bennett. (6s. net. Ginn.)

Prof. Bennett writes for the student years of intending teachers. And it is well that they should know the best that is being done in the States in the direction of school buildings and the planning of grounds. It would be still better if members of Education Committees, and those who hold the strings of the rate-payers' purses, could be induced to read the book and study the efforts that are being made in the more enlightened districts of America to give to children the best physical conditions that are possible.

*Fifty Years of American Education. A Sketch of the Progress of Education in the United States from 1867 to 1917.* By Ernest Carroll Moore. (3s. 6d. net. Ginn.)

It is always pleasant to find the human element in a corporation. To most people the name of the firm Ginn is a mere business label or trade mark, indicating, be it noted, that the goods may be expected to be sound. We learn from the preface to this book that just fifty years ago "Edwin Ginn took desk room in a modest Boston office, and so began the business which has been conducted under the firm name of Ginn & Company." To mark their jubilee the firm asked Dr. Moore to write a sketch summing up the educational progress during the period.

### LATIN.

*Caesar in Gaul; and Selections from the Third Book of the Civil War.* With Introduction, Review of First-year Syntax, Grammar, Prose Composition, and Vocabularies. By Benjamin L. D'Ooge and Frederick C. Eastman. (6s. 6d. net. Ginn.)

A very complete book, well produced as regards type and paper, and embellished with numerous coloured illustrations, diagrams, maps, and other aids to the elucidation of the text. It comprises in one volume all the material needed for "the second year" of Latin, as the preface states. In English schools the study of this language often begins at the age of nine; it must not be imagined that this

(Continued on page 104.)

- Outlines of Inorganic Chemistry.** By E. B. LUDLAM, D.Sc., Head of the Chemical Department, Clifton College. 5s.

LONDON: EDWARD ARNOLD, 41 & 43 MADDOX STREET, W. 1.

book is suitable for children of ten. But for intelligent pupils who begin Latin at the age of fourteen or fifteen it would prove a very attractive volume in their second year.

"Bell's One-Term Latin Classics."—(1) *Livy's Veii and the Etruscan Confederacy*. Edited by S. E. Winbolt. (2) *Cicero: Pro Milone*. Edited by C. E. Laurence. (Each 1s. 3d.)

Useful little books, with a short explanatory introduction and a few helpful notes; about fifty pages of well printed text.

*The Eclogues of Faustus Andrelinus and Joannes Arnolletus*. Edited, with Notes and Introduction, by Wilfred P. Mustard. (1 dol. 50c. Baltimore: Johns Hopkins Press.)

Andrelinus was professor at the University of Paris towards the close of the fifteenth century; Arnolletus followed him closely in point of time. Here, therefore, are no classical writings for schoolboys to read, but rather for scholars interested in the history of the humanistic pastoral to which this is the author's third contribution.

#### FRENCH.

*Living French. A New Course in Reading, Writing, and Speaking the French Language*. By Richard T. Holbrook. (6s. 6d. net. Ginn.)

This book is apparently compiled for the use of undergraduates who, already possessing the general, and sometimes loosely based, knowledge of the language that is acquired in schools, propose to deepen and strengthen their study from the beginning. The first lesson deals with the articles, the plural of nouns, and the present tense of *avoir*. The discussion and explanation of the usual grammatical forms is continued through seventy-seven lessons, covering nearly five hundred closely-printed pages. Throughout much attention is given to pronunciation and the symbols of the International Phonetic Association.

"Siepmann's French Series for Rapid Reading."—*Les Mécontents*. Par Prosper Mérimée. And six other volumes. (6d. each. Macmillan.)

Each volume contains about thirty pages of well printed text, a short introduction telling the reader what he needs to know about the author and the story, a few very brief notes, and a list of words and phrases in the style usual in Mr. Siepmann's books.

*La Fontaine: Selected Fables*. Edited, with Introduction, Notes, and a Vocabulary, by Cécile Hugon. (3s. Clarendon Press.)

Seventy-three fables are given, covering some hundred pages. The introduction gives a life of the author, a discussion of the fables as a form of literature, the sources of some of the fables, and grammatical notes on the language of the author where it differs from the standard. At the end of the book are some fifty pages of notes and a full vocabulary.

*French Prose: from Calvin to Anatole France*. By R. L. Graeme Ritchie and J. M. Moore. (Dent.)

The authors contribute an introduction, and there is a full chronological index, as well as an index of authors. The body of the book contains three hundred pages of extracts from more than fifty French writers of repute. The idea of the anthology is to give senior pupils an opportunity of at least learning the names of, and getting some ideas in connexion with, the great names in French literature before they leave school.

#### SPANISH.

*España Pintoresca. The Life and Customs of Spain in Story and Legend*. By Carolina Marcial Dorado. (4s. net. Ginn.)

There are 160 pages of extracts from Spanish writers, dealing with modern life, some songs with music, exercises, notes, and a full vocabulary. Students possessing a knowledge of the elements of the language will find this volume a helpful bridge to the study of the literature of Spain.

*A First Reader in Spanish*. By Rudolph Schevill. (2s. 9d. net. Ginn.)

The first two pieces are accompanied by an interlinear translation, and the stressed syllable of each word is marked. The aim is to give modern Spanish that will accustom the pupil to everyday language and inform him upon matters of life in Spain. There are notes and a vocabulary.

*A Foundation Course in Spanish. Part III*. By L. Sinagnan. (3s. net. Macmillan.)

This third and last part of the course deals especially with the reflexive verbs and the subjunctive. A brief synopsis is given of Parts I and II. The arrangement is as before—grammar, exercises, and translation in each lesson. The two latter are unusually full. There is a vocabulary in both languages.

*Spanish Composition*. By Charles Dean Cool. (3s. 6d. Ginn.)

This book is arranged on a sound plan. There are twenty-eight lessons; each lesson contains a page or two of Spanish, passages selected for their descriptions of Spain and Spanish life, and a piece of English to be turned into Spanish after careful study of the preceding passage on which it is based. There is a full Spanish-English

vocabulary and an English-Spanish vocabulary of words not given in the text. There is also a grammar drill after each lesson.

"Heath's Modern Language Series."—*First Spanish Course*. By E. C. Hills and J. D. M. Ford. (4s. net. Harrap.)

Each lesson is arranged in the familiar form—a piece of grammar, some sentences in Spanish and some in English, followed by rules in Spanish and questions for conversation. Full vocabularies in both languages.

#### ITALIAN.

*An Italian Grammar*. By Ruth Shephard Phelps. (5s. 6d. net. Ginn.)

The grammar is combined with reading matter and sentences for translation into Italian, thus forming a complete volume for the student. Full explanations of early difficulties are given, and many illustrations of idiomatic uses. There is a full vocabulary.

#### RUSSIAN.

*Handbook of Russian*. By Michael V. Trofimov and James P. Scott. Vol. I. (3s. 6d. net. Constable.)

Vol. I consists of an introduction and chapters on Phonology and Elementary Morphology. This first attempt at Russian "phonetics" for English readers is sure of a warm welcome amongst modern students of the language who realize the importance of sounds as well as the printed word. The script used is the work of the authors, and will be grasped readily by students.

#### ENGLISH.

*The Poems of Edgar Allan Poe*. Edited by Killis Campbell. (6s. 6d. net. Ginn.)
